As yet it would be premature to speculate on the future effects of this sentiment. Evidently enough, it makes strongly for Canadian independence and nationality.

It must be said that the grievance of Canada is more sentimental than real. The machinery of the award was doubtful, perhaps unfair; the award itself was, we think, indisputably just. The arguments were conducted before the world—an advantage in any case—and the judgment of disinterested Continental critics bears out Lord Alverstone in all his findings. That their cause was slighted the Canadians may properly contend; that due weight was not given to their plea, very few Canadians have asserted. The unequal balance of the tribunal bound Lord Alverstone to a double loyalty to the British contention. One must believe that he could have been won only by overwhelming evidence. This will surely be the final conviction of the Dominion. And while a stranger may hardly pass upon the family quarrel with England, the moral of the Alaska decision is clearly that Canada does well to do her negotiating with the United States directly. The tortuousness of the Alaska dealings is a very potent argument for the submission of future disputes to the Joint High Commission.

MOMMSEN.

In this age of specialists the really great scholars, those who have made the most important contributions to knowledge, have usually been specialists in more than one department. They may have tilled a limited field, but they have used the implements of more than one science. To his lifework, the reconstruction of the ancient Roman world, Mommsen brought a twofold training. He was at once a philologist and a jurist; and he made himself a recognized authority in each of these departments. His early studies in the ancient Italian dialects were purely philological. His earliest writings, on the Roman *collegia* and the Roman *tribus*, like his later works on Roman constitutional law and Roman criminal law, were juristic. His unequalled eminence as an epigraphist was gained by his mastery of both sciences; for his ability to divine the formula concealed behind a series of initial letters, and to supply the words that must have stood on a lost fragment of a memorial stone, sprang in many cases from his familiarity with Roman public and private law. His success as an editor of legal texts—his production, for example, of an edition of Justinian's Digest which has displaced all preceding editions—was due to the fact that he was not only a Roman lawyer, but also a great Latinist.

His greatest contribution to our knowledge of the ancient world is doubtless his monumental 'Römisches Staatsrecht.' In the sixteenth century the union, in Cujacius, of humanistic with legal learning had developed a new school of jurisprudence; and what Cujacius and his nineteenth-century successors, from Savigny to Jhering, have done for Roman private law, that Mommsen has done for Roman private law. The work was undertaken as a revision of the second volume of Becker's 'Roman Antiquities'—a title which carries us back to the purely humanistic origin of this branch of learning; but the lawyer in Mommsen discarded the customary chronological arrangement (monarchy, republic, empire), and he treated each of the fundamental institutions of Roman constitutional law by itself, tracing its development from beginning to end, and emphasizing its essential identity through all variations. At the same time, Mommsen, the philologist and epigraphist, controlled sources of knowledge which the ordinary lawyer can use only at second hand.

This happy combination of different specialities gives, of course, only a partial explanation of Mommsen's success, and no explanation of his unique eminence in his

chosen field. This was due to purely personal qualities—to the restless energy which displayed itself in every line of his thin, tense, almost fierce face; to an unusual capacity for rapid and sustained labor, without which the enormous bulk of his literary output would be inexplicable; and to a still more unusual combination of breadth of view with minute and almost microscopic mastery of details. He commanded his facts, not they him; and, vast as was his learning, it was digested into knowledge.

But for one book Mommsen would be, to the world at large, and even to the educated world, one of those great men whose greatness is taken on faith, on the testimony of experts. In the three volumes in which he sketched the history of Rome to the death of Julius Cæsar, he spoke directly to the general reader, and with extraordinary brilliancy and power. The attractiveness of this book is in part due to the absence, not merely of notes, but of all citation of authorities and discussion of evidence. All the scaffolding which usually remains standing about learned works and obscures their architecture, has been cleared away. In greater measure, the success of the work was due to its clear and telling style; but most of all to the feeling—it is hardly saying too much to say passion—with which it was written. The Revolution of 1848 had drawn Mommsen out of his study into the struggle of his fellows for political liberty. The part he took in the revolutionary movement cost him, in 1850, the chair he held in the Leipzig law faculty, and it was two years before he obtained another academic appointment. In 1854 and 1855 he published his 'Roman History.' In a period of political reaction he showed his discouraged fellow-Liberals, who had failed to establish either popular government or German unity, how the Romans had won political liberty, and how, as a free people, they had established the most powerful State in the ancient world. Without underrating in any way the intrinsic value of the work, its extraordinary power may fairly be ascribed to the heat in which it was written.

It has often been asked why a radical Liberal like Mommsen was so warm an admirer of Julius Cæsar, and why so warm an admirer of Julius Cæsar was so uncompromising an enemy of Bismarck. The answer seems to be that Mommsen's politics, as revealed in the Revolution of 1848, in his 'Roman History,' and in his later political career in Berlin, were really class politics; they were primarily anti-aristocratic. In the German Revolutionary movement in 1848, several distinct tendencies were fused in a temporary alliance for the attainment of common ends. The tendency which Mommsen and his fellow-Radicals represented was democratic. Their attack upon princely absolutism was like that of the third estate in France in 1789, largely a revolt against the dominant aristocracy behind the throne. The struggle of the Roman plebians for a voice in the conduct of affairs, and the democratic revolt, in the last century of the Republic, against the supremacy of the Senatorial clique, were, to Mommsen, movements analogous to that in which he had been engaged. In the Roman senatorial order, to whose members commerce seemed ignoble, and the supervision of agriculture or of cattle-raising the only occupation — outside of war and politics — that was worthy of a gentleman, Mommsen recognized the Junkerthum of the ancient world. It is in the third volume of his history, in describing the struggle between the senatorial clique and the democratic party, that Mommsen's partisanship becomes most evident and his narrative most dramatic and absorbing. He could not be decently fair to Cicero, for Cicero started as a representative of the Roman merchant class and as a democrat, and ended as a supporter of the senatorial party. Mommsen was drawn to Cæsar because Cæsar led the democratic party and destroyed the senatorial oligarchy. The military empire which Augustus reared on the ruins of the Republic could have had little attraction for Mommsen—all the less because, as he was writing his history, Louis Napoleon was establishing a similar government in France; and it is not without significance that the fourth volume of the 'Roman History,' which was to describe the founding of the Empire, was never written. To the provincials, of course, the Empire was a blessing, and Mommsen published a fifth volume, on the provinces, in 1885; but this displays none of the fire of the earlier volumes—it is a serious, learned work like his 'Staatsrecht.'

In 1867 the great Liberal party, to which Mommsen belonged, was divided. Those who cared more for national unity than for parliamentary supremacy became supporters of Bismarck. The democrats remained in opposition, and with them Mommsen. Bismarck, who was always an aristocrat, and who had kept his promise, made in 1848, that the name of Junker should be clothed with new honor, was disliked and distrusted by them *et dona ferens*—even when he had given the Germans unity. To Mommsen, as to his fellow-Radicals, the new Empire was not the democratic Germany of which they had dreamed and for which they had striven.

ART AND HUMOR IN ENGLAND.

LONDON, October, 1903.

An exhibition of Phil May's drawings in a London gallery has followed fast upon his death, as was to be expected, for he was one of the rare few whose work not only was appreciated by artists, but was popular with the general public. The collection is made up chiefly of his more recent drawings for *Punch* and for the last number of his own *Annual*. His work, to the end, retained many of its distinctive qualities—its expressive line, its amazing economy of means, its feeling for character. But it must be confessed that something had gone from it since the days when the "Parson and the Painter" took all the world that cares for good drawing by storm. He never did anything finer; perhaps he never did anything again quite so fine. There are not many illustrators who have been able to withstand the benumbing influence of *Punch;* and Phil May was not, like Charles Keene, the exception. Certainly, whatever the cause, after he went on the staff of that paper his drawings seemed to lose their old spontaneity and freshness, their old irrepressible gayety—even, in a measure, their old mastery of the decorative value of well-balanced spaces of black and white. But, for all that, there is no one in England now who can compare with him as a humorous draughtsman, no one who could show such an accomplished series of designs.

Sketches also are included—studies of figures and costumes, mostly in pencil, and less characteristic of his work as it is known to the public. Some are excellent, preserving all the old directness and adding the tone and color which, of course, he never strove for in his pen drawings. Others had just as well not have been exhibited. It has become the fashion to parade as masterpieces the studies of one little group of students here before they have produced or exhibited finished work, but Phil May was too great an artist for such devices to be resorted to in his behalf. He might have waited, as Charles Keene waited. Keene's sketches were long to be had, even after his death, for a few shillings each, and are beginning only now to be valued by collectors, prized though they have ever been by artists. There is also in the May exhibition a series of portraits of prominent politicians, Balfour, Chamberlain, and the rest, drawn as a rule in pen-and-ink with flat washes of color; almost Phil May's very last work, I believe. Their chief merit is negative. It is as if he had hesitated between a good portrait and an effective caricature, and obtained neither. Such color as he gets is, at least, never crude or offensive. Beyond this there is little to be said, and, suggestive as it always is to see the first attempts in color of the distinguished artist who has hitherto confined himself to monochrome, in Phil May's case they only make one wish he had lived to carry his experiments further, or else that such tentative performances had not been exhibited.

The great interest of this show at the present moment, however, lies, above all, in the fact that, in an adjoining room at the same (the Leicester) gallery, a collection of Rowlandson's has been hung, while an exhibition of Charles Keene's has been opened by another dealer at the Dutch Gallery, within convenient distance, so that an excellent opportunity is presented for a comparative study of the worth of the three greatest artist-humorists of England since the days of Hogarth.

In one respect there is no question that the gain has been great, the development immensely for the better. Rowlandson was an artist, no less than Keene and Phil May. I may not go as far as M. Huysmans, who, according to a quotation now making the rounds of the press—which I do not remember, and have not yet been able to trace—was ready to put aside Gavarni and the Devérias, and I hardly know whom else, in favor of Rowlandson. But neither can I deny that Rowlandson was an admirable artist when he left humor severely alone. I have seen drawings of women by him as graceful as any study by Reynolds or Gainsborough could be, and some of his little landscapes are full of charm. He understood economy of means as well as Phil May, though, naturally, his methods for the reproduction of his day were entirely different. But his line was as direct and expressive, and his color was obtained as simply by flat washes, and yet none of his contemporaries, not even Gainsborough, could express the character and beauty of a landscape with more intense truth and sympathy. When it came to

humor, however, it was another thing. To be sure, he is remembered now as the great humorist, but I would cheerfully sacrifice all his caricatures and satires for one of his little landscapes or studies of figures. Some of his most famous designs are in the collection at the Leicester Gallery—designs like the "Dressing for the Masquerade" and the "Fencing at Angelo's," but they only confirm me in my estimate of him as humorist. Hogarth could see and express humor without stooping to exaggeration and gross caricature, but Rowlandson did not know how to be funny without exaggerating; his one idea of character was caricature, his one idea of fun was farce. When he would ridicule the vices and manners of his time, he fell into a corresponding grossness. His drawings abound in as vulgar and revolting passages as the writings of Smollett. This is the more irritating because he was, in his way, a greater genius than Smollett, and his genius should have saved him from follies and excesses that have not even the redeeming virtue of being strong and deadly as satire. His laughter was indulgent—he laughed not to kill, but to amuse.

With Keene the grossness disappears wholly. He was as refined in his attitude toward the types he drew—not always refined in themselves—as in his technical methods. He had a far keener eye for character than Rowlandson, and it saved him from seeing only caricature. Character, for him, had always beauty. He found it in what are usually called vulgar types, the coster and the cabby, the policeman and the waiter, the slavey, and, above all, the drunken man—just as Rembrandt found it in the Jews of Amsterdam, Velasquez in the dwarfs in the Spanish court, Hals in the jester and the fishwife. He had, too, a respect for character or beauty. He rendered it with a truth, a realism, that is beautiful in itself, not with the silly absurdity of the designer of comic valentines. And because these types were humorous as they lived, so they were humorous in his drawings. At one time it was the fashion to deny all humor to Keene because he did not invent his jokes. It was the sort of criticism to be expected in a country where, in an illustration as in a picture, nothing counts but the story. I have seen people go through an exhibition of Keenes, reading scrupulously every jest entered in the catalogue, roaring at each in turn with never a glance at the drawings on the wall, and enjoying it all enormously. But, really, it made no difference who invented Keene's jokes. His drawings would be as amusing had no legend ever been printed beneath. People used to say he chose them because he was incapable of seeing beauty in graceful form or refined features—he could not draw a beautiful woman, "a lady," they said. There are drawings of women in the collection at the Dutch Gallery that give the lie to this criticism. It was only that strong character interested him more. And not only was he a greater humorist, he was a greater draughtsman, than Rowlandson, even a greater master of line and simple means. The present exhibition is especially interesting, sharing, as it does, many of his preliminary sketches and studies with the finished designs and the engravings.

He belonged to a school of illustrators who believed that as much care and thought and study should go to the making of the smallest drawing as to the painting of the biggest picture. To him an illustration was not something to be knocked off in an odd moment—a useful pot-boiler—but a work of art, great or not according to the seriousness with which the artist devoted his talent or genius to it. There are numerous instances of this seriousness; not one, perhaps, demonstrating better what I mean than the elaborate study for one of his drunken men (the sort of subject the public probably thought he dashed off anyhow), where not only is the composition carefully sketched in, but a detailed note of the hands of the principal figure is still more carefully made on the margin. These sketches are always freer in handling than the drawings; Keene not having worked year after year for the wood-engraver in vain. He learned quickly what was best not to do if he did not wish the veriest travesty of the original design to appear on the printed page; and he was artist enough to retain, despite those restrictions, an effect of freedom that was the distinction of his work in the midst of the drawings of Du Maurier, Tenniel, Sambourne, and the others, who each had worked out a formula more or less mechanical to lighten his own and the wood-engraver's task. Still, when Keene's studies are seen with the finished designs and these with the engravings, it is realized how much was lost before his work reached the public.

Here, certainly, Phil May had the advantage. It was easier to work for "process," once its possibilities were grasped, and May recognized from the start what it could do, and what it could not. His friends now are beginning to say that too much has been made of the influence which the new mechanical processes and rapid printing had in forming his style. This is absurd; for it is really altogether to his credit that he should have been artist enough to know how to adapt his methods to the technical requirements of his art. His work loses far less in the reproduction than Keene's. As for the actual drawing, I do not think it ever quite equalled the refinement of Keene's. Besides, Keene had a sense of design, an appreciation for the essential part every detail played in the composition, that May did not even endeavor to rival. You can always see that his backgrounds, when there are any, were carefully studied, but he expressed them by shorthand; and, in most cases, the figures would be as effective and eloquent without them. Keene also used shorthand, but within broader limits. The effect of his figures often depends upon their relation to the landscape—the marvellous stretches of moorland or the simple cabbage patch—to the London or village street, to the room as full of character as the people. In his humor, too, May is less refined; his fun, like Rowlandson's, verging upon farce, his character lost in caricature, when seen side by side with Keene's—though he is never vulgar, never gross, never childish as Rowlandson was only too often.

However, the great merit of both Charles Keene and Phil May is that each, after his own fashion, could combine fine drawing with genuine humor. That is where they differ so utterly from almost all other would-be humorous draughtsmen in their own country since Hogarth. Some may have been artists—Rowlandson for one, as I have said—but then their sense of humor was primitive and naïve to the last degree, Unfortunately, the very primitiveness, the very naïveté, has always appealed to the great British public with its sneaking fancy for the amateur in art. Let a man but try to do what it is not his business to do, and, even if he fail in the endeavor, your honest Briton will applaud to the echo. For example, when the County Council band plays in the garden below my windows on summer evenings, the musicians have only to stop blowing their horns, which is their special business there, and begin singing without voices, or crowing like cocks, to drive their audience wild with delight—until I often think if they would drop their instruments altogether, and walk round the garden on their hands, their success might well make even Sarasate or Kubelik wonder. So it is with art. I do not suppose any artist of note was, for awhile, more paragraphed than the policeman of Leeds (or Bradford) who had the landscapes he painted in his leisure moments rejected at the Academy. A picture that presents any optical delusion—for instance, a Christ with eyes that open and close—will draw the town.

A certain *Punch* drawing at the time of the Fashoda excitement came more perilously near breaking the peace of Europe than all the offensive cartoons of the French draughtsmen during the Boer war. Keene and Phil May seldom touched upon politics, but in political cartoons, as in all else, their artistic reticence (half the secret of their greatness) would most likely have kept them from the extreme, on the one hand, of feeble fatuity, on the other of clumsy insult. It is no use, however, regretting the might-have-been when there is the too evident fact to face—as it is faced eve y week in *Punch*—that illustrators distinguished both as artists and as humorists are not made every day in England, and that no one has yet appeared who can quite take the place of either Keene or Phil May.

Correspondence.

THE TRIUMPH OF TAMMANY.

To the Editor of The Nation:

Sir: The present situation in New York, as a result of the recent election, was well summed up, many yea-s ago, on general principles, not by a statesman or politician, but by the poet Wordsworth, as follows:

> "Tho' I bewail
> This triumph, yet the pity of my heart
> Prevents me not from owning that the law
> By which mankind now suffers is most just.
> For by superior energies; more strict
> Affiance in each other; faith more firm
> In their unhallowed principles; the bad
> Have fairly earned a victory o'er the weak,
> The vacillating, inconsistent good.
> Therefore, not unconsoled, I wait, in hope
> To see the moment when the righteous cause
> Shall gain defenders zealous and devout
> As they who have opposed her."

Spectator.

THE ALASKA ADJUDICATION.

To the Editor of The Nation:

Sir: The Alaska award, as reported by cable, in the main supports the contentions of the United States. But still, in some of the less important points, the adjudication found is in favor of Canada. Consequently, the decision of the Adjudication Board—for the Joint Commission as consti-

tuted was not a real Court of Arbitration —was a diplomatic compromise.

The chief point of contention was whether Canada should obtain an outlet upon tidewater on the Lynn Canal in the northern part of the *lisière* or thirty-mile strip. The main question is now settled against her by the opinion of Lord Alverstone, the Lord Chief Justice of England, for the award of the Adjudication Board confirms the United States in the possession of an unbroken *lisière* above the Portland Channel, which opens into the ocean at fifty-four forty, showing that the Lord Chief Justice was convinced by the overwhelming force of the evidence in favor of the United States.

Canada, considering that her pretensions were not based on sound facts, made very favorable gains by the Adjudication award. At one or two points, as on the Stikine River, for instance, the eastern frontier of the *lisière* is brought probably a little too near the sea water, all of which redounds to the advantage of Canada. At the mouth of Portland Channel, at the south end of the *lisière*, Canada obtains Pearse and Wales Islands. At first sight the possession of these islands seems of small importance. But their geographical position, immediately opposite the Canadian harbor of Port Simpson, gives them, in spite of the retention by the United States of the two small outward islands of Kannaghunut and Sitklan, an important strategic value. Port Simpson is destined to be the western terminus of the new Canadian Transcontinental Railroad. Canada, with Pearse and Wales Islands in her possession, will control the Portland Channel, and can build at Fort Simpson another naval stronghold like Halifax on the Atlantic and Esquimault on the Pacific, and from it menace our developing trade across the Pacific Ocean with Alaska and Asia.

The management of the Alaska boundary contention, its submission to the Adjudication Board, and the resulting award cannot be called a real triumph for the cause of international arbitration. But, now that this dangerous frontier question is in a large measure out of the way, it is to be hoped sincerely that efforts will be made by both the United States and the Canadian Governments to bring about a commercial rapprochement between the two nations. And the sooner negotiations are carried on directly between Washington and Ottawa instead of by the roundabout and cumbersome way of Downing Street, the better —as M. Henri Bourassa, a grandson of Papineau, pointed out in a notable speech on October 23 in the Dominion Parliament —for the maintenance of cordial relations between the United States and Canada. We Americans—and by Americans are meant all those who live in the New World, from the Arctic to the Antarctic—should try to live as far as possible on friendly terms with one another, and let the nations of the Old World fight among themselves if they wish, while we sell them the implements of war, whether of food, or garments, or weapons. Estimated in dollars and cents, such a policy will pay much better than for Canada to help fight the wars of Great Britain in the Old World, or for the United States to try to draw the chestnuts out of the fire in the Orient for the benefit of European nations. Certainly, up to now, the Philippines have not been a paying investment for us; and to urge this country to invest in transoceanic wars in the name of commercial advantage is very much like advising individuals to place their money in one of the numerous South Sea Bubbles that are floating around in the industrial market. T. W. BALCH.

PHILADELPHIA, November 7, 1903.

MORTALITY STATISTICS AND THE AVERAGE DURATION OF LIFE.

TO THE EDITOR OF THE NATION:

SIR: The recent publication of Mayor Low's figures as to the lowering of the death-rate in New York last year gave rise to a discussion which leads me to ask the question, What relation is there between average mortality and average longevity? On the face of it the answer seems easy enough. Given a death-rate of twenty per thousand, year in, year out, and the average duration of life is fifty years. Thus reasons the average man, and he would be right if population were stationary. But, excepting a few countries and cities, it is not. The average age of all the dead in any one year proves nothing conclusive as to the longevity of the people in the particular locality, for the average age at death may be widely at variance both with the average longevity as based, by the process mentioned, on the death-rate per thousand, and with the average duration of life as ascertained by local medical experience. Thus, the physician's estimate of the probable duration of life of the average newborn child in New York will very likely be not far from thirty-five years, while Mayor Low's figures would seem to show an average of about fifty years. What, then, does the lowering of the death-rate of New York by, say, 2 per cent. indicate as to the average lengthening of life with which it undoubtedly is, in some ascertainable way, connected?

The subject is a puzzling one, as was admitted by an eminent physician who took part in the discussion concerning it. We know that, in estimating the average duration of life in New York and a few other American cities, due weight must be given to the constant influx of immigrants (mostly in the prime of life); but an equally important part of the problem is the question of the excess of births over deaths. Without full knowledge on these points, we can draw no conclusions from a decreasing mortality. In no department of statistics do figures so often lie while telling the truth. As an amusing illustration of this fact, I may perhaps recall the statement of the United States Census Bureau for 1870 as to the death-rate of Iowa—nine per thousand, if my memory serves me right. The figures were no doubt correct on their face, but the deduction that the average duration of life in Iowa was 111 years would have been preposterous. The simple explanation, of course, was that the sturdy young farmers (mostly newcomers from other parts of the country) who then formed the bulk of the population of the State had not yet had a chance to die; nevertheless, a sage commentator ventured on the assertion, in print, that "these figures prove Iowa to be the healthiest country in the world."

Similar, though possibly not equally glaring, mistakes will be made by the statistician who, without full consideration of the points mentioned, and perhaps of other data that may be readily supplied by your mathematical readers, draws inferences as to average longevity from recent death statistics. Without such data, the widely varying mortality figures (taken from the article "Vital Statistics" in the 'International Year-Book' for 1902) of cities like Chicago, 14.68, Montreal, 25.46, London, 18.8, and Moscow, approximately 31 per 1,000, prove practically nothing as to absolute or relative duration of life. GUSTAV POLLAK.

NEW YORK, November 8, 1903.

SIGNOR RICCI'S SUCCESSOR.

TO THE EDITOR OF THE NATION:

SIR: The appointment of Sig. Corrado Ricci as director of the galleries of Florence, as well as of the National Museum (Bargello), has been officially announced. Sig. Ricci is called away from his work at Brera while it is still unfinished, at least as far as the illustrated catalogue which he had in hand is concerned; but so much has been accomplished of unusual excellence that it is earnestly to be hoped he may have a successor capable of continuing what has been begun. There is, however, reason to fear that he will be followed by a man who, so far as he has done anything at all, has heretofore given only proofs of utter incompetence for such an office. And this not in the lack of men of ability and training. The Government already has, in similar posts, men like Cantalamessa in the gallery of Venice, Supino in the Bargello, Bariola at Modena, Modigliani in the Villa Borghese, or Valeri, now inspector at Brera and author of a valuable work on Lombard art recently published; or, going outside of its employees, there is Sig. Frizzoni, whose competence in matters of art is everywhere recognized, or Diego Sant' Ambrogio, or Sig. Carrotti of the *Officio Regionale*, all in Milan, or Filangeri di Candida, who declined the directorship of the museum at Naples, from motives for which we can have only sympathy. There seems no reason which can be avowed why the choice should fall upon one incapable of continuing the work of Sig. Ricci, and who, in fact, can avoid doing harm only by doing nothing at all.—I am, sir, very sincerely yours, S. K.

P. S. The *Corriere della Sera* just received contains a note to the effect that Dr. Ricci, in leaving Milan, had put the provisional direction of the gallery of Brera in the competent hands of Sig. Valeri; and adds, on the authority of a Roman paper, that the Minister Nasi will name Prof. Sinigaglia, the person alluded to above, not as director but as "comandato," which is a military term applied to persons not in the public service and commissioned for special tasks. It remains to be seen if the word can be made to cover a more important office.

TITIAN'S "SACRED AND PROFANE LOVE."

TO THE EDITOR OF THE NATION:

SIR: It seems to me a fatal objection to Signor Palmarini's interpretation of Titian's so-called "Sacred and Profane Love" as a representation of the same person in two different moods of mind, set forth by Miss Teresina Peck in your issue of October 15,

that, though neither of the personages is actually speaking at the moment, the picture is evidently a conversation piece. The nude woman is making a mute appeal to the other, to whom she is beckoning with the uplifted censer, and whom she regards with intense earnestness. The draped woman is no less clearly revolving a deep thought, anxious and irresolute. Her apparent repose is but "the tempest's central calm." She is neither "cold and shy" nor "fired with love," but is passing from the former mood to the latter under the influence of her companion. It is conceivable that Titian might depict Laura Dianti in two different states of feeling in distinct compartments of the same picture, but it is inconceivable that he should bisect her. The draped woman is parleying with her soul, undoubtedly, but the colloquy passes within her own breast.

This would not prove that Laura Dianti was not Titian's model (and the conjecture would derive some countenance from the evidence that he painted her "nuda e vestita") but for Signor Gnoli's discovery, announced in your impression of July 2, that the arms depicted upon the fountain are those of a Venetian family. Had she been the subject of the picture, they would have been hers, or those of her ducal lover. In any case, the identification of the model would afford no clue to the purport of the picture. I should for my part be disposed to entitle this "Chastity and Desire." I see no necessity for regarding the undraped female as Venus, although the physical objections stated by some of your correspondents, which would be conclusive in the case of a mortal, would not apply to a goddess. It nevertheless appears to me more natural to consider the figure as simply a personification of Desire. Granting, however, that she is Venus, she appears in no connection with any episode of mythology. The identification of the draped figure with Medea is quite untenable. It is founded upon a passage in the 'Argonautica' of Valerius Flaccus, the first three lines of which sufficiently refute it:

> "Ecce toro Venus improvisa resedit,
> Sicut erat, mutata deam mentitaque pictis
> Vestibus et magica Circen Titanida virga."

Flaccus evidently contemplates Venus's visit to Medea as paid in her chamber, but the scene of the picture is in the open air. Medea's *torus* cannot have been out of doors, and there is no *torus* in the picture. Flaccus's Venus assumes the character of Circe, and wears *pictæ vestes*. The vested figure in the picture is not the temptress, but the tempted; and where is the *magica virga?* The unclad person is younger than the clothed one, but Venus appears to Medea in the character of her aunt. It seems manifest, therefore, that Titian did not intend to illustrate the passage in Valerius Flaccus; and as the existence of this passage is the only reason for identifying the figure in the Medea, this theory falls to the ground. If Medea had been in Titian's mind, he would have intimated this by the introduction of some appropriate symbol.

There is no Paris edition of Valerius Flaccus with the date 1550 and "Sacred and Profane Love" as a frontispiece in the British Museum, nor do I find one mentioned by any bibliographer.

Mr. Andrews and I are agreed that the undraped figure represents Love in some one of its phases. His exposition is exceedingly beautiful, but I cannot reconcile it with the expression of the countenance, which he allows to be one of intense earnestness, and which appears to me to denote not wistfulness, but urgent solicitation "alluring to brighter worlds." The hesitation and conflict are in the countenance of the other woman. At the same time I must acknowledge that Mr. Andrews is at a great advantage from having continual access to the original picture.

I remain, dear sir, yours very truly,

R. GARNETT.

27 TANZA ROAD, HAMPSTEAD, LONDON,
October 27, 1903.

Notes.

Mr. William Roscoe Thayer has undertaken, at the request of Mr. Fiske's family, to edit the Letters, Journals and Memorials of the late John Fiske; and he will be greatly obliged to any of Mr. Fiske's correspondents who will send his letters for inspection. Address No. 8 Berkeley St., Cambridge, Massachusetts.

The family of the late Elizabeth Cady Stanton are preparing for the press a collection of her letters. Persons having any would confer a favor by sending them, in America, to Mrs. Stanton-Blatch, 612 East Buffalo Street, Ithaca, N. Y., and in Europe to Theodore Stanton, 9 Avenue du Trocadéro, Paris. The letters will be copied and carefully returned to their owners.

George D. Smith, 50 New Street, New York, has in hand 'American Bookbindings in the Library of Henry William Poor,' described by Henri Pène du Bois, and illustrated in gold-leaf and colors by Edward Bierstadt. The book will be manufactured in a limited edition at the Marion Press, Jamaica, N. Y.

Fresh announcements from the Macmillan Co. are 'The Opening of the Mississippi,' by Frederic Austin Ogg, and 'My Devon Year,' by Eden Philpotts.

'Under the Hill, and Other Essays in Prose and Verse,' including his table-talk, by Aubrey Beardsley, with numerous illustrations, is promised by John Lane.

An independent essay, entitled 'Optimism,' by Helen Keller, and 'Travels in Europe and America,' by Charles E. Bolton, are in the press of T. Y. Crowell & Co.

Nearly ready are 'The Engineer in South Africa,' by Stafford Ransome; 'Liquid Fuel and its Combustion,' by W. H. Booth; 'The Motor Pocket-book,' by Mervyn O'Gorman and Cozens-Hardy, and 'Canada in the 20th Century,' by A. G. Bradley, which E. P. Dutton & Co. are preparing.

'Literary New York: Its Landmarks and Associations,' by Charles Hemstreet, and 'Infection and Immunity,' by Surgeon-General George M. Sternberg, are to be looked for from G. P. Putnam's Sons.

James Pott & Co. are about to bring out 'Budapest, the City of the Magyars,' by F. Berkeley Smith.

Of the late John Fiske's 'Dutch and Quaker Colonies in America' we spoke at length some three years ago. The work has, after the manner of its predecessors, been beautifully reissued in two volumes by Houghton, Mifflin & Co., with illustrations that seldom even approach being trivial, and are for the most part examples for imitation by all publishers. There is a wealth of authentic portraiture, with facsimiles of autographs and other MSS., of charters, early title-pages, early maps, early views (of New York in especial), adding immensely to the understanding of the period and the narrative. Much of this pictorial apparatus is new. Peter Stuyvesant's face greets one who opens the first volume, William Penn's the second. The binding is in wine-colored cloth; the print leaves nothing to be desired, and the inserted cuts have imposed no gloss on the paper.

The Century Co. brings out fresh, holiday editions of John Luther Long's 'Madame Butterfly' and of Alice Hegan Rice's humorous little tales, 'Lovey Mary' and 'Mrs. Wiggs of the Cabbage Patch.' The Japanese illustrations for Mr. Long's novel are by C. Yarnall Abbott, and are happily conceived and skilfully drawn in tint, though the faces of the women are somewhat Europeanized in expression. All the plates are full-page, and harmonize well with a generous typography. The illustrations for the companion stories just named are somewhat in the vein of Phiz, inclusive of coloring, and are well in keeping with the text. The type is bold, but not equally to our taste with that employed in 'Madame Butterfly.'

A new edition of that pictorial guidebook, 'The Shakespeare Country Illustrated,' by John Leyland (Charles Scribner's Sons), contains two new chapters on the Washington and the Franklin "countries." It thus appeals to Americans, and, so far as photography can give it interest, little but praise is due. The genealogical matter is not entirely correct, and even Franklin's own researches into his family history are overlooked. Proper credit is given to Mr. Henry F. Waters for his discoveries in the Washington family record. The connection between reading-matter and illustrations is necessarily slight. The maps are excellent, and, in a more convenient form, the book would make an admirable companion for a visit to these places.

For a reprint of the Boston edition of John Dickinson's 'Letters from a Farmer' Mr. R. T. H. Halsey furnishes a judicious preface, in which the great popularity the letters attained is outlined, and a formidable gastronomic tribute eaten in his honor described, with toasts beyond the endurance of ordinary mortals. Mr. Halsey has also reproduced a very rare contemporary portrait of Dickinson, of which nothing is known; and the charming Duesbury statuette in porcelain of Mrs. Macauley, whose democratic leanings led her to sympathize warmly with the American colonies. The volume is very beautifully printed, and is published by the Outlook Company.

Henry Ospovat's pen-and-ink drawings for Browning's 'Men and Women,' one of the Dent-Dutton "Miranda Series," are very inefficient in conveying the suggestions of beauty of the poems. They have neither the directness which comes from grace of line, nor the mastery of light and shade which makes decoration, nor have they the redeeming merits of invention or poetic feeling or beauty. The defective drawing is everywhere noticeable in the figures; the rough pen-and-ink cross-hatchings fail to express the modelling of faces and hands, while the human form is not to be found beneath the loose, ill-fitting gar-

ments more like coal sacks than men's coats. "Old Pictures in Florence" and "Mesmerism" are striking examples of slovenly execution and of the abuse of intense black. The headpieces are of far better quality than the full-page illustrations; the little head in "Women and Roses" shows that Mr. Ospovat can draw a pleasing face when not preoccupied with the intention of being forcible. The type and general presentment of the volume are good, but, to make satisfactory pen-and-ink illustrations, more mastery of the material and a greater knowledge of drawing are necessary than Mr. Ospovat possesses at present.

The short essays on 'Some Arts and Crafts' written by women specialists for Dutton's "Woman's Library" will be found of use to the uninitiated desiring to choose a craft. They vary very much in interest, as also in literary quality. Miss Elinor Hallé's article on the art of enamelling is by far the best in the volume; it shows none of the feminine aptitude for digression, but gives a short history of enamelling and its uses in the past, and what is necessary to equip a would-be follower of the art. Miss Hallé insists on the necessity of long artistic training in drawing and design before anything worth while can be accomplished in ornamentation of any kind. May Crommelin's history of French and English Furniture from Henri II. of France to the Victorian epoch in England is the most important contribution, and very instructive in its account of the gradual development of each prevailing style of decoration. She also offers suggestions for modern house-furnishing, and advice to those who wish to devote themselves professionally to that work. All she says is so much to the point that one can only regret the florid, ejaculatory style in which it is given. Spinning, weaving, bookbinding, wood carving, and photographic portraiture are the subjects under consideration. The illustrations are fairly good.

Volume three of 'Critical Essays of Charles Lamb,' edited by William Macdonald (London: J. M. Dent & Co.; New York: E. P. Dutton & Co.), forms part of a twelve-volume edition of Lamb's complete works, and contains about half the non-Elian essays, handsomely printed, sufficiently annotated, and illustrated with numerous but indifferent plates. The statement in the preface that the editor had divined from certain cryptic passages in the essays that Lamb had made a proposal of marriage to Miss Kelly and been rejected, and that while his note to that effect was in the printer's hands Lamb's original letter containing the proposal was found by another person, affords a curious instance of literary penetration.

The moral drawn by Mr. Cleveland Moffett himself from his vivid descriptions of 'Careers of Danger and Daring' (The Century Co.) is that the average man could cultivate, by exercise, the habit of courage to such an extent as to be able to keep his head in a lion's cage or on the steeple of Trinity Church or on the girders of the East River Bridge. Most readers will scarcely be convinced. They will rather —and perhaps this result is quite as wholesome—regard with a new admiration and sympathy those who risk their lives in their daily task, especially when some public end is to be served. One of the chapters, on "The River Pilot," mentions incidentally a fact not generally known respecting the attempted relief of Gordon. The Canadian *voyageurs* employed by Lord Wolseley declare, it seems, that Khartum might have been saved if they had been trusted to bring the army up the Nile cataracts without being delayed for a test of their skill.

The counsels given to young men by Dr. William Mathews in 'Conquering Success' (Houghton, Mifflin & Co.) remind one of Samuel Smiles rather than of P. G. Hamerton (whose name the author misspells). But although most of them are obvious, the abundance of illustration by which they are relieved saves them from dulness. Nor is Dr. Mathews open to the charge, which might perhaps be suspected from the title of the book, of preaching a mere vulgar gospel of "getting on." To become a great captain of industry is not exalted here as the ideal of a successful life. There is not, however, an altogether satisfactory sense of proportion in the writer's grouping of famous persons. It is something of a shock to find R. L. Stevenson and Andrew D. Mellick, jr., bracketed as instances of perseverance under ill health, and Ella Wheeler Wilcox immediately following G. H. Lewes to show that a literary career may begin with rejected manuscripts. The transition from the energy of A. T. Stewart in building up his Broadway store to that of Sir T. F. Buxton as anti-slavery leader in Parliament is also somewhat abrupt. A few repetitions should have been corrected. It becomes tiring when one is assured for the third time within a hundred pages that *vivida vis animi* is one of the secrets of success.

'Ferns,' an illustrated manual for the Northeastern States, by Campbell E. Waters, Ph.D. (Henry Holt & Co.), is for amateurs, and is a substantial addition to the pretty copious fern library prepared for general readers. It possesses, besides, a good deal of interest for the professional botanist on account of an analytical key of novel character. The key itself is ingenious, but it has been found in some cases a little hard to work. An artificial analytical key has been called a pick-lock, and, like all pick-locks, requires a fair degree of familiarity with the wards in order to open the bolt. The text is well written and chatty, and, as a whole, interesting. It is, however, for the house, and not for the field, since it is printed in a volume of about four pounds' weight. The paper and typography are of a degree of excellence which makes the heavy book too fine for excursions and almost too handsome for the study table. But Dr. Waters doubtless desired to have a good setting for his exquisite photographic reproductions. A few of these plates are among the best of their kind, while all of them are, perhaps, as good as the subjects permitted. The chapter on Fern-photography, which closes the work, indicates that the author has devoted much loving care to this part of his task.

What with Mr. J. W. Davidson's recent encyclopædic work, 'The Island of Formosa,' and the three volumes that have issued from the pen of the scholarly Scottish missionary, the Rev. William Campbell of the English Presbyterian Mission at Tainan city, in Formosa, this island is now an easy subject of study, for the accessible literature concerning it is exact and voluminous. 'Formosa under the Dutch, Described from Contemporary Records,' is a portly octavo of 629 pages, printed at the Edinburgh University Press (London: Kegan Paul, Trench, Trübner & Co.). On the cover is stamped the golden sixteen-petalled imperial chrysanthemum, showing that this island, land of the morning-glory and blue bamboo, is now an integral part of the Japanese Empire. Mr. Campbell, besides being a delver in the Dutch mine, has made himself familiar also with the stores of Chinese and Japanese books relating to Formosa. Recent visits to Holland have enabled him to complete his work, for the Dutch of late years have been putting in order their archives of missions in the Far East. His book is divided into three parts, the first of which treats of topography, anthropology, and history of the Dutch trade. The story of the Dutch missions and of religion is very full. No fewer than 270 pages are given to the Holland correspondence and documents. Part III. treats of the conquest of the island under Koxinga. In an appendix pretty much all the learning in the old books relating to the island, as found in European authors, is gathered up in orderly arrangement. The explanatory notes represent many years of patient labor. In our age it seems strange that, amid so much effort for the "salvation" of the Formosan people, such things as torture and slavery existed, while it is a hopeful sign that under the Japanese, despite popular report to the contrary, the really responsible officials in the island have no sympathy with a course of procedure that in any way countenances judicial torture. Altogether this volume is highly creditable to the scholarship and patient research of the compiler. An excellent index opens the treasures contained between its covers, making it worthy of an honored place in the historical library.

W. E. Curtis's 'Denmark, Norway and Sweden' (Akron, O.: The Saalfield Publishing Co.) is a heavy volume of 505 pages, with 77 illustrations, containing the letters written by the author during the summer of 1901 to the Chicago *Record-Herald*. The title is slightly misleading, as only 65 pages are devoted to an account of Copenhagen and its immediate surroundings, while the bulk of the volume includes descriptions of all the principal towns and many of the country districts of the other two Scandinavian lands. Mr. Curtis has shown his accustomed skill in selecting interesting topics about the men and institutions of the North, and he relates them in a chatty, frankly non-literary manner. Many of the statements are marred by the inaccuracy of the traveller at the mercy of interpreters, and the frequently quoted foreign words and names are not always correct. In general, however, the proof-reading is remarkably good, and the proportion of mistakes is hardly larger than may be found in many more serious works. The reference in the frontispiece to the "late Queen Sophie" is probably due to confusion with the Queen of Denmark, and the title "Queen Ingeborg" under another portrait is evidently a slip, as is also the reference on the first page to the same princess as Charlotte. Most of the author's mistakes result from his overfondness for statistical and biographical details. Mr. Curtis evidently understands the taste of his democratic readers, for a generous space is devoted to the dif-

ferent members of the two royal families. Some of the stories about the Royal Danes tax severely the credulity of the patient reader. Here, however, as elsewhere, the treatment is markedly sympathetic. The details of contemporary Scandinavian politics are wisely avoided, and the author disarms criticism by the modest manner in which he refers to his own opinions upon the literature. The illustrations deserve special mention for their interest and beauty. The index of three pages is fairly adequate and accurate.

The tenth Bulletin issued by the Department of State at Washington is based upon certain Jefferson MSS. obtained from the Library of Congress in 1897, and hence not included in the calendars of the Jefferson papers printed in 1894. The material is very miscellaneous, and ranges from an interleaved diary to notes on scraps of paper, undated and unsigned; from anonymous letters of advice to printed price-lists of household wares. The series of Dumas, Dearborn, Madison, and Robert Smith letters contain much of public interest, while that of Page is strong on the personal side. An index of the three Jefferson calendars is added.

The cosmopolitan character of the German universities appears from the fact that, out of the 37,813 matriculated students, there are, according to the computation of the *Strassburger-Post*, no fewer than 2,731 foreign, or 7.2 per cent. of the total contingent. Comparison shows a slight proportional increase in the past decade (four-tenths of one per cent.). Distribution among the universities is very uneven; Berlin, Leipzig, and Heidelberg, where as many as 15 per cent. of the student body are non-Germans, being the favorites. Berlin reports 876 foreigners, Heidelberg 197, Leipzig 406. Bonn, which formerly was much frequented by outlanders, now has only 2.6 per cent. of them, and Rostock and Münster have only a dozen. Russia leads with 860 students, followed by Austria-Hungary with 536, America with 276, Switzerland with 253, England with 149, Asia with 133 (mostly Japanese), Bulgaria with 67, Rumania with 63, Greece with 56, Italy, the Netherlands, and Servia each with 45, Turkey with 36, Sweden and Norway with 32, Luxemburg with 27. The total number of Europeans is 2,299, of non-Europeans 432. The foreign element in the universities is considerably smaller than it is in the technical institutes.

We welcome anew 'Meyers Historisch-Geographischer Kalender,' for 1904, from Leipzig and Vienna by way of Lemcke & Buechner, New York. The original scheme of this instructive calendar is preserved, and old prints jostle with new (mostly photographic) as before. A novel feature is a table showing the latitude of the chief towns of Germany, and the difference between the local time and middle-European time.

—President Eliot's paper on "The School" easily takes the lead in importance among the various contributions to the November *Atlantic*. It is not the unbalanced theorizing of the doctrinaire that one finds here, but the application of sound common sense to the problems of elementary education, as those problems have presented themselves to the writer in the course of a long and ever alert career as an educator. The possibility of harmonizing the utilitarian and the humane, within certain limits; the advantages which may be gained by bringing the child into contact with other children and adults outside its home environment; the power of the school, by reflex action, to improve the home surroundings of its pupils; the development in children of the power of complete mental absorption in the work in hand; the cultivation in unison of the somewhat antagonistic habits of reading and observation; the training of the reasoning faculty, and the strengthening of the will-force, are the leading points discussed. For either parent or teacher it is an extremely suggestive discussion, and should by no means be missed. Sir Leslie Stephen's third chapter deals with his journalistic career. Apart from the first-hand information as to the review-writing of the time, the paper will be appreciated for the delightful vein (or, rather, flood) of humor which runs through it. One thinks of Lowell as he reads. In discussing the relative standing of the magazine and the book form of publication, Sir Leslie says that we seem to be reversing the order of the past: "The presumption is coming to be that an author publishes in book shape because he cannot get admission to a magazine." Brooks Adams reminds us again that we must kill somebody and do it quickly if we are to have any future. "Dreams of peace have always allured mankind to their undoing." Our present duty, as seen through his gory glasses, is to seize upon the ore deposits of China, lest Russia and Germany form a coalition, absorb Northern China and South America respectively, and suffocate us in the fumes of Russo-Germanic blast-furnaces.

—The workers in science are spurred on so strongly by their fascinating task of finding out new things, that they seldom snatch a moment to set forth afresh a consecutive view of the course of development of a given line of thought. That has been done, however, by way of exception, by Mr. Frank Allen in the *Physical Review*, for the subject of theories of color; and a curious procession of kaleidoscopic vagaries of the human intellect it makes—probably it would be hard to find another better exemplification of the weakness of the human mind. By holding fast to a sound building-stone contributed here and there, a few not too tottering structures have at last been built; of these each stands a menace to the others. The "grand confusion" on which all thinkers shipwrecked for many years was the failure to make any distinction between subjective sensation and objective cause of sensation. Newton not only made to the subject the important contribution involved in his separating objective ether-rays into a continuous band of gradually changing refrangibility, but also laid down this great principle—a foundation-stone for all psychology—on the subjective side: "The rays of light, to speak properly, are not colored; in them is nothing else than a certain power and disposition to stir up a sensation of this or that color." These words will appear in letters of gold when the final history of science is written.

—The current number of the Quarterly Statement of the Palestine Exploration Fund contains the last report of the excavations of Mr. Macalister at Gezer. Primitive rock-cut caves, representing, perhaps, an aboriginal pre-Semitic sanctuary, together with a large, rock-cut pool of unusual character, are reported and described. There have been no other striking "finds" and no important inscriptions. A note on the lamp and bowl deposits found under walls of the early Canaanite and Israelite periods is interesting. Mr. Macalister thinks that he can trace the following evolution in the "foundation rite" represented by these curious deposits. Originally, at the erection of a building, an infant was built into the wall alive, as a sacrifice. Of this there is no evidence from Gezer, but only the argument of analogy from the customs of other countries and races. In the next stage the child victim was killed and the body placed in a jar, which was set under or built into the wall. Of this there are evident traces. In the third stage pottery vessels, perhaps containing food for the victim, were placed with the jar. In the fourth stage, while the act of sacrifice continues, it is also symbolized by the use of a lamp and a bowl or bowls, the latter probably containing blood or grape juice. In the last stage, the one the evidences of which have been most frequently discovered, the human victim is omitted, but the symbols retained. Egyptian objects continue to be found in large numbers in all strata of the excavations, so that it is clear that Egypt was "dominant over Gezer throughout its history, as no other foreign nation seems to have been." Incidentally Mr. Macalister points out that this tends to refute the theory, now supported by Cheyne and others, which would make the Mizraim mentioned in the Old Testament (for instance, Solomon married the daughter of the King of Mizraim, who captured Gezer from the Philistines and gave it to her as her marriage portion), and the Musri, of the Assyrian inscriptions, generally, if not always, not Egypt, but a country in northern Arabia. Professor Porter of the Syrian Protestant College in Beirut gives the text and translation of another short Phœnician inscription from the Temple of Eshmun, at Sidon, slightly different, he thinks, from those hitherto reported, containing the name of the new king, Sadukyaton or Zedekyaton. This new name rather increases the difficulty of finding a proper space for the Eshmunazar dynasty at "any time subsequent to the days of Nebuchadrezzar so as to accord with the known facts in the history of Phœnicia."

—In the last number of *Mittheilungen und Nachrichten des Deutschen Palaestina Vereins*, Dr. Dalman, head of the new German Evangelical Archæological Institute in Jerusalem, reports, under the title "Epigraphisches und Pseudepigraphisches," some curious forgeries, the more important of which seem to be left over from the activities of Shapira and his school. One is a sarcophagus, now in a cellar-like vault under a house on the Mount of Olives. On the cover is sculptured a mailed head with close-cropped, full beard, a crown on the forehead, apparently a representation of a king or prince of the crusading period. Accompanying this is an inscription, in old Hebrew characters, borrowed for the most part from the Siloah inscription. Evidently an original, plain sarcophagus of a common type had been recut and then inscribed by antiquity forgers. This particular work suggests the Shapira frauds in the labor and expense involved in its preparation. A gran-

ite fragment of a column, said to have been brought from the east of the Jordan, contains a twelve-line inscription resembling in its details one of the fraudulent inscriptions of the same school. Fraudulent antiquities of another description illustrate the present activity of antiquity forgers in Palestine, who find a market for their wares among the ignorant and gullible pilgrims and travellers from this and other countries.

—The bilingual report for 1902-03, in Japanese and English, of the Imperial Library of Japan, formerly the Tokio Library, just issued, shows that the growth of the library since its formation in 1878 was steady and continuous until 1884. After a sinking spell for two years, there was a steady increase of books accumulated, issued, and read. Mr. Tanaka, the librarian, was trained at Cornell University, and had experience in other American libraries. The report shows a total of 211,283 volumes, classed under eight heads, of which 168,098 are Chinese and Japanese, and 43,285 are European and American. The majority of readers select literature and language, history, biography, geography, and travels, under two heads, but the greatest number in a single field are those in mathematics, science, and medicine. Theology comes last, and philosophy and education are penultimate. Fiction does not seem to be included in this library. An addendum in a still later publication shows that there was in March, 1903, a total of 401,419 volumes, and that, accommodations in the premises of the museum controlled by the Department of Education being judged inadequate, work on a new library building has been started. In other parts of the empire, after the oldest in Kioto, followed by the two in Osaka (one of which is very handsomely housed), there are, in addition to libraries of a private, corporate, circulating, or itinerant nature, 42 of a public nature, containing 217,813 volumes, making a grand total of 619,232 volumes, one-tenth of which are in European languages. Though free libraries are as yet few, there is a constant increase of use and interest in loaned books as shown by the statistics set forth this year. The number of books published in 1901 was 18,998, of which 18,963 were original works and only 35 translations. In the previous decade the annual number of publications averaged over 20,000, but translations were then much more numerous. Now translation, reduced almost to the vanishing-point in quantity, has vastly improved in quality. In a word, the era of making collections of books for free public use in Japan has begun, and the day of purely private ownership, Government or monastery seclusion, is over.

—The interest in 'Adventures of an Army Nurse' (Boston: Little, Brown & Co.) lies in its being a transcript of experience; and its value consists in the comparison of hospital work in our Civil and the Franco-German wars made at the time by a participant in both. The diary and letters reveal Mrs. von Olnhausen, of Massachusetts birth and ancestry notwithstanding her name by marriage, as a vigorous, narrow-minded, assertive woman with a great heart and supreme energy, who gradually developed some breadth of view, and, after considerable stress, generally had her own way, which seems to have been for the patients' good. The record confirms what many remember, that "Miss Dix's nurses" were assigned and detached quite independently of the medical authorities; that most of the women who went into the hospitals had had no other than domestic experience with sickness and none with wounds; that many of the detailed attendants had little interest in the duty and less in the patients; that the overworked and newly created staff was often handicapped by lack of organization; and that the hospitals nearest the field frequently were overcrowded. Abroad, Mrs. von Olnhausen had for the French as individuals only contempt, and for the German military hospitals disapprobation. "The most demoralized soldiers (not even excepting the Southerners after the war was over) that I have ever seen are these Frenchmen —dirty, ragged, haggard, miserable-looking fellows. . . . Such women and men as one sees in the fields cannot bear heroes" (p. 275). "I went to visit two [German] hospitals she has under her care, and no words can tell about them. In our most disorganized days in our worst field hospitals I saw nothing like it. The beds were abominable, the patients dirty, and, it seemed to me, in every way uncomfortable. The rooms were not even *ill*-ventilated" (p. 224). The volume is the outspoken record of a rural Yankee with no respect for authority, for precedent, or for other usages than her own, but with an overwhelming desire to *do* things, and a great sympathy for those in physical and other distress.

—Mr. Jack London has discovered a mysterious and unknown country, has penetrated it, and has come out alive. The problem of reaching it baffled even Thos. Cook & Son, of whom he inquired before starting, but there was no "impossible" in his dictionary, so here we have, in 'The People of the Abyss' (Macmillan), the story of his explorations in that hitherto unreported region. With an air that might become a Stanley or a Landor he now tells us all, and more than all, about—the East End of London! Sir Walter Besant, from the knowledge of a lifetime, was most impressed by the monotony of the East End; Mr. Jack London, having investigated it "in the summer of 1902," describes it as Dante might have described his Inferno if he had been a yellow journalist. And from his sojourn east of Aldgate he has also learnt that "whatever is true of London in the way of poverty and degradation is true of all England." So terrible is the condition of things that "there are forty millions of the English folk, and 939 out of every 1,000 of them die in poverty, while a constant army of eight millions struggles on the ragged edge of starvation." Mr. London's statistics must have been obtained by the same process as some of his photographs. In spite of such figures, he sees for the English "a broad and smiling future" so far as "manhood and womanhood and health and happiness" go. This reform is to be won by throwing upon the scrap heap "a great deal of the political machinery which at present mismanages for them." But if any penitent Briton should ask what he must do to be saved, the writer has no suggestion to offer except that the 400,000 English gentlemen recorded in the census as of no occupation should be set to work ploughing game preserves and planting potatoes. Mr. London would have shown himself more practical by drafting a bill for that purpose and publishing it as an appendix. It is earnestly to be hoped that he may never come to hear of the bread line on Broadway, or the sweatshops of Chicago, or the child labor of the South. Heaven only knows what article of the Constitution would then be safe from amendment.

—At last, apparently, we have that heretofore 'Unpublished Essay of Edwards on the Trinity,' about which we have had so many hints and so much discussion along the course of half a century. Bushnell had heard of it in 1851 and demanded its publication. In 1880 Dr. Holmes charged the custodians of the Edwards MS. with the suppression of an essay that was heretical "in the direction of Arianism or Sabellianism." In 1885 Professor Stowe wrote as having examined an unpublished essay of remarkable interest. We thought we had it when, also in 1885, Prof. E. C. Smyth published Edwards's 'Observations concerning the Scripture Economy of the Trinity and the Covenant of Redemption.' It was very disappointing, and it wasn't the real thing. Of this we had had actual intimation in two articles by Professor Park in 1881. He had had the lost book of Edwards, and it had vanished in a manner over which Professor Fisher of Yale University hangs a tolerably transparent veil. Later it was recovered and deciphered, and it is now handsomely published (Charles Scribner's Sons), "with Remarks on Edwards and his Theology," by Professor Fisher. Instead of being heretical, it is more orthodox than New England orthodoxy has been generally since Edwards's time. It is certainly more Athanasian. It is Professor Fisher's opinion that the essay was withheld because of its prophetic accusation of the later New England theologians as tri-theists. They meant to be orthodox, but they did not know what orthodoxy was, and suspected Edwards of heresy when he was more orthodox than they, holding a doctrine of tri-personality which was not tri-theistic. It is interesting that Bushnell, could he have unearthed the essay, would have found it departing from the current orthodoxy on the same side with his own opinions. Orthodox or heterodox, it is a singularly juiceless, dry, and gritty piece of work. It is not even faintly representative of Edwards's better mind as exhibited in his 'Nature of True Virtue.' It is a great relief to pass from it to Professor Fisher's excellent "Remarks," which abound in nice discriminations and are particularly admirable for their account of Edwards's influence on later theologians. To have Edwards commended by such late fruit as that which grew on Channing's trees, is a less singular performance now than it would have been some fifty years since.

MORLEY'S GLADSTONE.

The Life of William Ewart Gladstone. By John Morley. In three volumes. The Macmillan Co. 1903.

Mr. Morley's biography is an effective eulogy as well as a vivid portrait, and of this the reader will not in the least complain. As recent lives have occasionally reminded us, a biography by a friend and follower not frankly colored by friendship

and loyalty is sure to be bad. Nor has Mr. Morley made the preponderance of politics excessive, though he speaks of the "gap" made in these pages by the absence of any detailed account of Mr. Gladstone as theologian and churchman. For the world at large, the interest of the subject is purely political. On the other hand, Mr. Morley gives full weight to the fact that Mr. Gladstone's temperament was essentially religious. He was not merely a great parliamentary, and later a great popular leader, but, as Lord Salisbury said, "a great Christian." His career must be studied as that of a Christian statesman. "He not only accepted the doctrines of that faith as he believed them to be held by his own communion: he sedulously strove to apply the noblest moralities of it to the affairs both of his own nation and of the commonwealth of nations." This devout son of the Church was filled from the first with a genuinely evangelical if not Puritan zeal. "May God use me as a vessel for his own purposes," he cries out at the age of twenty-two. He desired ardently to take orders that he might help to redeem his fellows from the pit of sin. His prayers remind Mr. Morley of Milton. At Oxford he was imbuing himself with the principles of Toryism and ecclesiasticism, but he was neither a Tory nor a Churchman at heart. The contrast between the early Gladstone who entered Parliament in 1832 as the protégé of the Duke of Newcastle, the apologist for slavery and the enemy of the ballot and electoral reform—he says himself that he saw "a certain element of Antichrist in the Reform Act" (I., 182)—and the Gladstone of the later nineteenth century has been often dwelt upon; Mr. Morley makes it clear that his early political opinions were accidental. Oxford had tended, he said in his old age, to "hide from him the great fact that liberty is a great and precious gift of God"; but he was even then laying the foundations of a liberal career, for Oxford had given him "a single-minded and passionate love of truth"; truth, however, rather moral than intellectual, the self-devotion to an ever-living and ever-present God, leading to what used to be called "vital religion," and consecrating the young Tory to a work of which he and his early admirers little dreamed. On his pilgrimage he was as sure to gain the adhesion of men like Bright as he was to earn the derision of cynics like Disraeli, and fail to secure the fidelity of demagogues like Chamberlain.

Mr. Morley's chapter on Mr. Gladstone's characteristics as a young man is full of illustrations of the fundamental simplicity of his character. Two or three points are of unusual interest. In the first place, nothing has been so urged against his sincerity as his wonderful feats in reconciling his own changes of opinion or attitude with one another. Mr. Morley admits the weakness, but points out that it was connected with his profound belief in the necessity of consistency. Even a verbal or logical consistency was better than none at all. This was extremely irritating, but deceived neither friend nor foe. It was Mr. Gladstone's one absurdity, the absurdity of a very serious-minded man. Again, though he had extraordinary force and activity of mind, he had no intellectual or scientific curiosity, no desire to explore new fields of thought. His four "doctors" were Aristotle, Augustine, Dante, and Butler; his source of inspiration was the Bible; on occasions of "sharp pressure or trial," "some word of Scripture has come home to me as if borne on angels' wings," and he gives in perfect good faith several of these verses, though it is impossible to detect any significance in connection between the verse and the occasion.

Nearly half the first volume is occupied with the period from the time when Mr. Gladstone, at the age of twenty-three (1832), entered Parliament, to the repeal of the corn laws, in 1846. As a member of the House of Commons and of Sir Robert Peel's Government, he served his apprenticeship at the business which he called that of "working the institutions of his country." The Duke of Newcastle gave him his seat for Newark, but exacted no pledges. The tone of the House was then, far more than it is now, that of "the best club in London." The press was quiet and decent, public opinion was that of the intellectual and governing classes; family connections and social standing counted for everything, and bad manners were the unpardonable sin. So far from members of Parliament keeping their "ears to the ground," as we say, or asking for what is now called in English political life a "mandate," attempts to influence Parliament by monster meetings and public clamor were discountenanced. A member was to be a true representative, but never a delegate; in so far as he yielded to noise and pressure, he showed himself unequal to his task. Mr. Gladstone evidently resented the existence of the Anti-Corn Law League as an ungentlemanly organization. Cobden's great offence in the House was that he imputed bad motives to his opponents, that his tone was "harsh."

There is plenty of evidence, during this period, of Mr. Gladstone's conscientiousness. The opium war with China he denounced in the House; on the tariff he gradually became, like Peel himself, an enlightened reformer; he retired from the ministry on account of the Maynooth grant; in the proceedings at Oxford against Ward he voted against the condemnation of the book, and when Pusey was condemned for preaching heresy, he signed a protest; in the Lady Hewley case he voted for a measure confirming Unitarian titles, against which Anglican influence was arrayed. At the same time he characteristically supported the very grant which led to his retirement from the Ministry, and wholly failed to make his attitude intelligible.

At the outset the reader perceives that he is dealing with an intellectual giant. The best proof of it is not the number of hours he was able to devote to work (though what we hear of this is startling enough), but the fact that, without the least preparation in the way of a business or legal education, he was suddenly able to make himself recognized, not only by the country at large, but by the interests affected, as a master of economic legislation, knowing more about manufactures than the manufacturer, and more about imports than the importer. What is at least equally remarkable is that while he showed at once this extraordinary mastery of public business, it was combined with an equal capacity in private affairs. In 1839, at the age of thirty, he married, and, through his marriage, became involved in the affairs of the Hawarden property, which he converted by years of labor from what threatened to be a wreck into a prosperous estate.

Between the time of the repeal of the corn laws and the Crimean war, Peel died, the old Tory party dwindled to a remnant, and Palmerston became the most important man in the government. In 1851 Mr. Gladstone aroused Europe to the horrors of Italy's enslavement by the publication of his letters to Lord Aberdeen, but his impulse was humanity, not politics. His prepossessions were still in favor of the European system established at the end of the Napoleonic wars, and the cry of "nationality" did not appeal to him. It was the cry of suffering prisoners tortured for opinion's sake that he heard. In the Crimean war, on the other hand, there were no Poerios or Panizzis to be liberated, and the consideration which seems to have affected his mind most decisively was that Russia was an offender against "the public law of Europe." It was only very far-sighted liberals like Bright and Cobden who perceived that the war was a reactionary struggle, destined to retard progress, futile so far as English interests were concerned, and effective only in bolstering up the doomed throne of Louis Napoleon and the decaying fabric of the Turkish Empire. At this time Mr. Gladstone was no Liberal, as we understand the word, but a Peelite statesman, engaged, in a Coalition ministry, in "working the institutions of his country." It is as a financier and economist chiefly that, during these years, he shines. His brilliant entry into and occupation of this field is now familiar history, but it was not at all anticipated either by his colleagues or by himself. His first budget he has himself described as "the most complicated scheme ever submitted to Parliament." It was opened to the Cabinet (on the question of legacy-duties that body was entirely against him) in a speech of three hours; that is, it was a question at first whether it could ever come before the House at all. At its close, to quote Lord Aberdeen, "we were all convinced." Its author had made the Chancellorship of the Exchequer the second post in the Government, and laid down the principles which were to guide English finance and taxation to the present day, and which bid fair to remain his great permanent monument for all time.

Of Mr. Gladstone's political career from the date of the Crimean war to his acceptance of office under Lord Palmerston, it is difficult to speak summarily. Step by step, in Mr. Morley's voluminous record, it marks the path of a conscientious Conservative driven by the pressure of conscience and his own leadership into a new and strange position. Those who are inclined to doubt his sincerity will find it difficult to account for the fact that, whenever an abuse was to be attacked, he attacked it, and that he never gave a sign of allowing his interest to determine his opinions. Sitting for Oxford, he reformed the Universities, although he at first denounced the proposal for an inquiry, and afterwards made his usual vain attempt to reconcile one position with the other. He was one of the earliest public men to insist on an open civil service, and carried what we now call in the United States the "merit system" through the Cabinet in 1854, against the opposition of Lord John Russell, who objected to it that it would make

the institutions of England "as nearly republican as possible," and that "the new spirit of the public offices would not be loyalty, but republicanism." The great Whig families like the Russells regarded patronage exactly as the great Tories did, indeed possibly with greater jealousy. An open civil service threatened their power just as an open civil service in the United States to-day threatens the "organization" and the "bosses" who control it. In finance Gladstone insisted from the first that war loans could be justified only by necessity, and were economically an abuse. When the question of the Suez Canal came up, and Lord Palmerston denounced it as a bubble, and as tending to dismember the empire by opening a passage between the Mediterranean and the Indian Ocean which would be at the command of other nations, Mr. Gladstone defended the project, as in the interest both of England and of mankind, with as much enlightenment as any disciple of the Manchester School could have done.

Mr. Morley devotes a separate book of sixteen chapters to the period between the Italian Revolution and 1868, when Mr. Gladstone became, at the end of his sixtieth year, Prime Minister. While it is impossible to fix an exact date at which the old European order, established after Waterloo, came to an end, after the rise of a united Italy it was seen to have disappeared. In the next forty years the forces of modern society, so long held in check, were to change completely the face of the world. The demands of nationality and democracy were to prevail; Italy, Germany, and France were to be recreated; slavery was to perish in its last strongholds; the "Balance of Power" was to disappear into the limbo of dead political devices. That Mr. Gladstone was destined to play a leading part in this great drama was not clear till much later. According to Mr. Morley, it was not till after 1863 that any extraordinary change began to be visible in him; and if the change in Europe be dated from the Italian Revolution, we should be inclined, on the evidence of these volumes, to connect the change in Mr. Gladstone with the discovery of his mistake about the American war. Mr. Morley shows conclusively that Mr. Gladstone was neither a sympathizer with the South as a slave power, nor hostile to the Union on the Tory theory that the success of the South would benefit England. But the language in which, in 1896, he recorded his opinion of his blunder in proclaiming, in 1862, that Jefferson Davis and the other Southern leaders had "made a nation" (coming from a Cabinet Minister this was supposed at the time to mean that England was about to recognize the independence of the Confederacy, and led Mr. Adams to talk of packing up), shows the deep impression made on his mind by the whole affair. His defeat at Oxford in 1865 had also a most important effect on his later career. His connection with Oxford, according to Lord Palmerston, had had the effect of keeping him "partially muzzled" down to that time. Let him go elsewhere, he added, and "he will run wild"; he did go elsewhere, and no doubt Lord Palmerston would have considered his subsequent political life as very "wild." When he was sent for by the Queen to form his first Government, he exclaimed, "My mission is to pacify Ireland." Mr. Gladstone's sole great rival was now Disraeli; but Disraeli was impotent to do anything but alternately oppose and help on the work in which Mr. Gladstone was engaged.

Mr. Gladstone remained in power till 1874 This is the period of the disestablishment of the Irish Church, the first Irish Land Act, the abolition of Purchase, the Franco-German war, the downfall of the Third Empire, the Black Sea negotiations, and the Geneva arbitration of the *Alabama* Claims. Mr. Morley is so anxious to shield Mr. Gladstone's memory from the charge of indifference to the interests of the Crown that he represents him as standing "sentry over the interests, whether profound and enduring or trivial and fleeting, of the ancient monarchy of this kingdom." This is stretching a constitutional fiction to its extremest limits. He brought to its ripest perfection the system of Cabinet government; the ministers, nominally selected by the Crown, becoming really agents of Parliament. This modern régime—government by a changing committee of the House of Commons—bid fair, in the hands of a powerful minister like Gladstone, to reduce the Crown to a nullity, especially as it was reinforced by the theory, pretty nearly established in practice, that the House of Lords was not to block legislation once resolved upon by the lower House. The old ministers had been courtiers, who had had the skill to make the Queen seem to herself a great ruler. Mr. Gladstone was a poor courtier, and an enthusiast for a new order in which she seemed to play a more and more insignificant part. The pacification of Ireland meant more agrarian legislation; his foreign policy of neutrality, peace, avoidance of entangling alliances (not unlike that established a century before for the United States by Washington), would reduce to a minimum the power of the Crown in European affairs. Nor was it only with the Queen that Mr. Gladstone was sowing the seeds of unpopularity. It is difficult for us who have no established Church to estimate the bitterness engendered by his Irish Church measures; the abolition of Purchase alienated the classes from which the services were recruited; the *Alabama* arbitration was regarded as a "surrender"; a peaceful foreign policy brought no glory, and it was impossible to sympathize with a man who preferred morality to colonies and conquests. Disraeli, always keen to see the defects in his opponent's armor, and already perceiving the value of Imperialism as a cry, denounced his rival as an apostle of "disintegration."

Mr. Gladstone's abdication of the leadership when the Conservatives came in in 1874, produced a kind of party anarchy. Lord Hartington succeeded him in the House, but he could not fill his place, for the Liberal party had come to mean Mr. Gladstone himself and his vast popular following. It was he who forced the liberation of Bulgaria into the settlement of the Berlin Congress; it was he who, in the Midlothian campaign, showed that a wide popular suffrage had begun to undermine even the power and prestige of Parliament itself. When, in 1880, the Conservatives were beaten, and the Queen sent for Lord Granville and Lord Hartington, those leaders were forced to tell her that the only man in England who could form and carry on a Liberal government was Mr. Gladstone. At the time of this recall he was seventy-one years of age, and felt his strength to be declining. But his ascendency was at its height, and, surprising as it may now seem, he thought, in assuming the reins again, that he could look forward to a period of quiet and orderly constitutional change.

Throughout his whole ministry he was involved in storms and threatened with shipwreck on every side. His new measures —a new Irish land law and a wide extension of the suffrage—had not, like the earlier repeal of the corn laws and electoral reform, the effect of solidifying his power. They seemed to bring him rather enemies than friends. The disruption of the Liberal party, of which this ministry was the opening chapter, was not retarded by any late change in Mr. Gladstone himself. His traits deepened and hardened, his habits of mind and action were confirmed by long success. Liberalism had been above all things a régime of measures. For fifty years he had solved all questions by a plan of legislation settled in advance. His task had been to strike off one by one the shackles imposed by privilege on trade and commerce, on political rights, freedom of religion; in foreign affairs, legislation being out of the question, his policy had been one of non-intervention and good will—that is, of a very simple principle or rule of national action, corresponding abroad with the system which underlay Liberalism at home. During all this time he had neglected another side of politics. In 1885 we find him saying, "I have never looked much, in Irish matters, at negotiation or the conciliation of leaders." Not only in Irish matters, but in all others, it was foreign to his temper to look at anything but "the measure in itself" (III., 198). But politics is only half measures and principles. The other half is just that negotiation and conciliation of leaders, to say nothing of actual intrigue, which to Mr. Gladstone was distasteful and impossible. In his old age, at every turn, we find that while he still sticks to measures and principles, they have ceased to play the same part in the public eye. The work of securing them has been done, a new generation is thinking of other things; the temper of the time has become such as to make the road to power one for a man endowed with opposite qualities to tread. Mr. Gladstone was a great orator, a great legislator, and a great finance minister, but he was not a great negotiator or administrator of imperial business. In foreign affairs, always so theatrical as they strike the attention of the domestic audience, this great master of the rhetorical arts—this great actor, as his enemies would have called him—did not know how to "take the stage." It is easy to imagine Disraeli or Palmerston making a great deal of capital out of Odo Russell's threat of war against Russia, or the Sultan's offer of Egypt to England; neither caused Mr. Gladstone anything but embarrassment. He got all the blame for Majuba and for Gordon's death. At home he angered the Queen, he had to part company with Bright, found his match in Parnell, frightened the House of Lords and the Church, and began to be looked upon in many quarters as a leader of assassins and dynamiters. Some of this odium a man of the world would have managed to escape. To make matters worse, he had an explanation for everything.

Mr. Morley, in dealing with the last twelve years of Mr. Gladstone's life, goes into great detail. This is the period of the author's Chief Secretaryship for Ireland, and the bitter warfare which, first ending in Mr. Parnell's destruction and the Irish disruption, finally terminated in the defeat of Home Rule and the consolidation of the power of the new Conservative party formed by the union of the Liberal-Unionists with the Tories. This part of the book is necessarily more partisan in tone than the earlier portions; it can hardly be said that the biographer gives us both sides. We perceive Mr. Gladstone more and more a target of obloquy, and more and more deserted by old and tried friends—men poles asunder on subjects other than this one fatal difference, like the Marquis of Hartington and John Bright; but we are not sufficiently let into their confidences. This was a revolutionary period—a time of crime and violence, wholesale arrests and imprisonment, conspiracies and assassinations, and it is too much to ask of one of the actors in it absolute historical impartiality. But, on the whole, this part of the narrative is rather negatively than positively defective. Biographically it is a complete picture of the consistent end of an extraordinary career. It was impossible for Mr. Gladstone to retrace his steps or to stop. He had become the leader of a great democratizing movement, and, had he lived longer after failing to carry Home Rule, he would certainly have next attacked the House of Lords, or any other line of defence which blocked his path. As long as his strength lasted, he was as nearly irresistible as any man has ever become under free institutions, and time has yet to show whether even in the settlement of the Irish question he was not merely in advance of his time.

To attempt a parallel between him and other public men of the Victorian age is not easy, for at one or more points he surpassed them all. As a parliamentarian and party leader, his only rival was Disraeli; but Disraeli in finance, business, or constructive legislation counted for nothing. Palmerston was his superior in knowledge of the world and of men, and in what has been called a kind of inspired consciousness; but at every other point his inferior. Lord John Russell and Lord Derby were not men of his stature; Cobden had not upon his shoulders the government of an empire. Peel's career in a certain sense foreshadowed his own, but Peel had not his range. Gladstone had a literal mind, and at bottom a simple character, but his power as legislator to devise and as orator to persuade, his courage and ardor, his range of emotion and enthusiasm, his variety, his industry, his mastery, are such as to fill us with continual surprise. A sustained eulogy, such as Mr. Morley's, is apt to suggest a doubt whether the picture is not merely the glorified portrait of a friend and worshipper; but, before we close the book, the doubt has been dissipated by the marvellous facts of the career itself. We have read the life of a man too great to be completely measured and understood by his own age.

RECENT POETRY.

We observe that the London correspondents of American literary journals take pains to vindicate the British public from having grown indifferent to Kipling. It does not seem to occur to these correspondents that the very fact of their offering defence shows clearly some need of it. Ten years ago no such correspondence was needed; ten years ago the publication of a Kipling volume was an unquestioned literary event. Can any one look through the newspapers or watch the booksellers' counters and say that it is now such an event? At that time, moreover, of all charges that could be brought against Kipling the most impossible would be that of dulness, but it is hard to turn the leaves of 'The Five Nations' (Doubleday, Page & Co.) without an ominous foreshadowing of that calamity. We find him, for instance, employing tiresome repetends, as where, in "Buddha at Kamakura," there are twelve successive four-line verses each ending with "Kamakura." He has mere mouthing and big words, as in "The Old Men" (p. 50). Where the lurid or wordy qualities disappear, we have songs with choruses which strike the ear as tediously as in "South Africa." So marked are these qualities throughout the book that when the calm and noble lines of the "Recessional" are found at the end, it seems as if they must be the work of some other author pasted into the volume. Two or three of the poems at most retain the old, vigorous touch, as seen in the "The Bell Buoy" (p. 4). In this, in "The Destroyers" and the "White Horses," we seem to recognize the former Kipling.

That the race of meek and reverential Kiplingites has not passed by, is evident from the 'Ventures into Verse' by Henry Louis Mencken (Baltimore: Marshall, Beek & Gordon). The author inscribes his book on the first page "To R. K." as "Prophet of brawn and bravery!" and becomes sufficiently Anglicized himself to imitate his hero with such verses as this (p. 14):

THE ORF'CER BOY.

"He was a gran' bhoy!"—*Mulvaney.*

Now 'e aren't got no whiskers
An' 'e's only five foot 'igh,
(All the same 'e is a' orf'cer hof the Queen!)
Oh, 'is voice is like a loidy's
An' 'e's so polite an' shy!
(All the same 'e serves 'Er Majesty the Queen!)

To show, however, that the sway of Kipling over our younger poets is clearly waning, we note the following in a volume from one of our latest California bards, 'Of Both Worlds,' by Herman Scheffauer (San Francisco: Robertson) (p. 110):

RUDYARD KIPLING.

False to the poet's purpose high, in vain
Craves he admittance to their golden fane,—
Juggler and jongleur, whose vulgarian muse
Roars from her narrow heart her rank abuse!
Who never Beauty knew and never Wit,
Who beats the drums for Truth—while beating it.
Renown shall with a sponge erase his name
Where on her walls he chalked it—to their shame.

Mr. Yeats, in the volume called 'In the Seven Woods' (Macmillan), also reaches the reader a little less, we fancy, than in its predecessors. It is curious how, as even writers of genius multiply their works, they are apt to turn us back more and more to some single note which touches the heart more than all its ambitious predecessors, as if, for instance, Kipling were to live to be mainly associated with Mandalay and Yeats with Inisfree.

If we suggest some apparent decline in power to Mr. Kipling and Mr. Yeats, we cannot attribute the same decay to Joaquin Miller's 'As It Was in the Beginning' (San Francisco: Robertson), for there was not in him so much material for decaying. This oddly shaped book presents in brief his version into poetry of President Roosevelt's sentiments on the subject of large families. Passing by the cheap voluptuousness of his tale, we confine ourselves to a brief sample of one of his more purely descriptive passages (p. 33):

"Again the swirling pool was gone,
Again the boat swept on, swept on,
That moon was as a thousand moons!
Two dead men swirled, one swept, one sank—
Two wolves, two owls, two yelling loons,
Three lank, black wolves along the bank
That watched the drowned men swirl or sink,
Three screeching loons along the brink—
That moon disputing with the dawn
That dared the yellow, mad Yukon!"

The gifts and the melancholy life of Mr. Henley are recalled by his 'Song of Speed' (London: David Nutt). It has been called by Mr. William Archer "an imperishable utterance," and at any rate it puts into existence and, we might say, into motion the most wonderful invention of the times. Alas, that this poet's passage through life was as swift and powerful and almost as wayward and uncertain as the vast engine he describes (pp. 24-27):

"Hence the *Mercèdes!*
Look at her. Shapeless?
Unhandsome? Unpaintable?
Yes; but the strength
Of some seventy-five horses,
Seventy-five puissant
Superb fellow-creatures
Is summed and contained
In her pipes and cylinders.
Mind after mind,
On fire with discovery,
Filled full with the fruits
Of an hundred fat years,
And mad with the dreams
And desires of To-day,
Have toiled themselves dull
To achieve her components.
She can stop in a foot's length;
She steers, as it were,
With a hair you might pluck
From your Mistress's nape;

. . . . . .

And she runs down the birds
(You can catch them like flies
As, poor wretches, they race from you!);
Ay, and becomes,
As the Spirit and Mind
Of God's nearest approach
To Himself hath so willed it,
The Angel of Speed—
Speed in the Laugh of the Lord."

Those who remember John Boyle O'Reilly, the Irish-American poet, and the absolutely loyal way in which he flung himself into American life, will be glad to receive a volume, 'My Candles, and Other Poems,' by Eliza Boyle O'Reilly, his eldest daughter (Boston: Lee & Shepard). It is rarely that a young poet, printing a first volume, concentrates so much strength into six lines as does Miss O'Reilly into the close of her title poem, which opens the book:

"Once in a seaport on the coast of France
I found a tranquil church, time-scarred and gray,
High on a hill, a beacon to the bay;
I saw a rough lad reverently advance,
Drop his small coin, and, with an upward glance
At the dim altar, light his candle. Yea,
Amid the wild storm of the ocean spray
This token had been vowed against mischance.

" 'O Faith!' I cried, 'Thou art a wondrous thing!'
Forthwith I lighted candles that were mine—
Tapers of trust in purpose, kindness, youth;
Now, when the beating waves or still calms bring
Discouragement, I bend before the shrine
Of the dead mighty ones who strove for Truth."

Many pages of the volume are given to delightful passages of foreign travel, of which this is one of the most graceful (p. 33):

THE PRIVILEGED HOUR.

Up Lustleigh Cleave I went one summer eve,
And as I climbed I met a child at play,
Of whom I asked, "What is a cleave?"
Then through that pleasant Devon way,
Through uplands strewn with giant stone,
With granite boulders rent and overthrown,
She guided me.
"Some one up there," she said,
And heavenward went her eyes in childhood's vague surmise,
"I think he scattered something here,"
I answered, "Mere rough rocks, I fear."
Perplexed, but confident, she shook her head:
"Oh—not rocks then!" she chided me.
Thou never failing mystery
In which a child can wrap this earth

From doubt, from chill of unbelief, this earth
Of grievous death, of ever-hopeful birth!

'Visions, and Other Verse,' by Edward Robeson Taylor (San Francisco: Robertson), is the work of a man well known for his varied labors, being at the same time dean of a law college and vice-president of a medical college, and finding time to translate a most difficult poet, Heredia. Besides all this, he has printed his translation in three different editions, each showing much labor in the way of correction and remoulding. The constant labor over these sonnets has perhaps given him too much tendency to sonnet writing, in this following the perilous example of Lloyd Mifflin, to whom he dedicates this volume. We like better some of his shortest poems condensed into a single profound thought; for example (p. 11):

IMAGINATION.

How insignificantly small we seem;
Yet marvellous times there are
When every sense in sublimated dream
Wings on from star to star;
Ah, then all principalities are ours,
And we, immortals with Herculean powers.

No poet, whether large or small, has more reason to complain of his publishers than Robert Loveman, author of 'The Gates of Silence, with Interludes of Song' (Lippincott). His poems are, as usual, almost wholly in eight lines, with little homœopathic pellets of modest truth visible in each poem. To take a page at random (p. 16):

"Poor rambling, shambling soul of mine,
Beyond the night, beyond the day,
When thou dost unto death resign
This happy habitat of clay,

"In high conclave, at feasts divine,
Will legions leap to heed thy nod?
Or, doomed to darkness, wilt thou whine,
A beggar at the gates of God?"

To these the publishers add a page of circulars in which the author is successively compared by different and amiable critics to Wordsworth, Tennyson, Poe, Aldrich, and Henley; and his poems collectively to roses in midsummer, and to wandering stars in the deeps of heaven. Mr. Loveman may, for all this, be a modest and simple-hearted man, and we wish him a less flattering environment when he next publishes.

Prof. Charlton M. Lewis, in 'Gawayne and the Green Knight' (Houghton, Mifflin & Co.), reverts to the old practice of telling a tale of chivalry in cheery couplets like those on which Keats would sometimes unbend himself. Barring the rhyming of "unequal" with "sequel," "want" with "menthe," "laurel" with "moral," "of" with "love," and the like, his poem is a pleasant contribution to academic literature. 'Idle Hour Flights,' by Robert D. Burnie (London: Gay & Bird), aims at preserving Welsh romances, and has a few attractive Welsh landscapes by way of illustration, along with some bold innovations in grammar. He calls attention to poems by the late Mrs. Key-Blunt, stated to be the widow of an American officer, and daughter of the composer of the "Star-Spangled Banner."

The two recent poetic volumes which appear to have most of that quality of "Concealed Mystery" which our visitor, Mr. Yeats, regards as the highest, are both women, and both hitherto unknown to us—the one English, the other American. From Ethel Clifford's 'Songs of Dreams' (Lane) we take "Cain's Song" (p. 125):

Lo, I am matched with Jehovah. Life of his giving
Have I destroyed and made vain. Cold and apart,
Abel lies dead in his grave while I, Cain, am living,
Warm, with the blood in my veins and desire in my heart.

Outcast am I: but the earth, fertile and kindly,
Stretches beneath me. The sun sets in the West,
Golden and red, and I see it, while Abel sleeps blindly,
Deaf to the rain, and I hear it. Lord, which is best?

Branded am I: but the deer, russet and sable,
Still are for quarry. And I hunt not in vain.
Mine is the triumph of storm and the gladness of rain, but Abel,
Nothing he knows though his face is upturned to the rain.

Cursèd am I: but the night has mysterious giving
Of dreams, and day lights fires that burn in the east and west.
Thy favored one lies in his grave and I, thine accursèd, am living,
Quick in the wonder of earth and the sunlight:
Lord, which is best?

The other volume is 'The Eastward Road' (James Pott & Co.), by Jeannette Bliss Gillespy, from which we quote the title poem (p. 35):

"Let us go on along the eastern way.
Behind us flares the sunset's gold and rose,
Before us, in the dusk that no man knows,
The level high-road stretches straight and gray.
Let us go on to meet the moon's first ray
Above the eastward path that twilight shows;
Let us go on apast the moon, till glows
Across the eastern hills another day.

Though, through the dark, mad shapes go scurrying by—
Reason and Rapine, Power and Unrest,
Kingdoms unburied, empires yet unborn—
While the night wind blows cool across the sky,
While man's ambition struggles toward the west,
Let us ride on through moonlight into morn.

'Poems,' by Marie Van Vorst (Dodd, Mead & Co.), apparently the first volume of a young authoress, also shows more genuine power than most books of its class. "The Song of the Wheat," the leading poem, has a good deal of originality, and strength of passion is well exemplified in the sonnet called "Excommunicate" (p. 115):

I do not find an altar, or a priest,
Nor any sacred, still confessional;
Masses and vespers, I must shun them all,
Tho' every belfry bid me to the feast!
I may not wear the cross upon my breast,
Nor make its sign; or in repentance fall
Before the niched saint. In canticle
I must not chant one frail blurred note, or least.

For my religion is my joy and shame;
My priest, my altar, canticle, and mass
Art thou! and lest thou hear my creed, and know—
Shouldst hear me sing my love, or pray thy name—
Unshriven with my burden I must go;
Proud, excommunicate, I pagan pass!

'The Round Rabbit, and Other Child Verse,' by Agnes Lee (Boston: Small), is a really charming little book, which quite suggests Stevenson's 'Child's Garden' in its pretty and graceful trifles for children's recitations. It has also a few good illustrations. Such, for instance, is that of a cheerful old man and his daughter, interviewing a little girl of the Kate Greenaway description, who thus performs her services as guide (p. 80):

THE CITY GUIDE.

What garden's that? With pleasure, sir!
The very garden where
The mad dog ran, that grocer's cur,
That gave us such a scare.

This street? The prettiest street in town.
Aunt Mary lives on this,
And Baby Prue walks up and down,
And never goes amiss.

The name? I don't remember; but
Why need a small girl know?
I'm sure it's where I found the nut
And lost my bonnet's bow.

I'm glad I've helped you, traveller!
No matter what they say,
A city's very simple, sir,
When once you know the way!

'Between the Lights,' by Alice Herbert (John Lane), is a tragic little book, of which the "Joyous Suicide" is one of the less saddening and crushing poems, and it may be well to quote the only verses written, apparently, in a sunshiny moment (p. 19):

"FEW PASSIONS CAN OUTLIVE A LITTLE SONG."

When Memory comes teasing you,
Trying to break your heart,
Telling of things that used to be,
And how you bore a part,
The safest Lethe you can drink
(You'll never find it wrong)
Is just the little drop of ink
That makes a little song.

When waking nights are heavy things
And Spring nights hard to bear;
When every bird that sees you sings
A melancholy air:
Then never dream and stray about
And shut your eyes and long,
But take a pen and work it out,
And make a little song.

Though every smile, however sweet,
Should make you sigh "If only . . .!"
And all the throng of passing feet
Should leave you more than lonely:
Though all your cry be "Come again!
The empty days are long,"
Perhaps you'll hardly find the pain
Outlive a little song!

'Lyrics and Sonnets, Second Series,' by Thomas McKie (Edinburgh: David Douglas), has the same qualities which marked the first series, a sympathetic sweetness, with a tinge of commonplace, and also the charm always given to even mediocre Scotch poetry by the proper names, which lend such attraction to the lines by their association. In 'The Ministry of Love,' by Irene Abbott (Crane: Topeka), the author speaks of having consecrated her life to the rescue work; and poetry written with this intent must no doubt be cheering to the author herself, if to no others.

If Mr. Frederic Crowninshield's 'Tales in Metre, and Other Poems' (Cooke) impresses us a little less than his previous volumes, it may be because they are printed in a little less atractive form and take their names less from the painter's art, but they are certainly above the average in execution. 'The Overture,' by Joseph Russell Taylor (Houghton), is made pleasing by the names of those who furnish this overture, and becomes attractive by the preponderance of birds and butterflies. There is little that is of human interest in it.

The author of 'Some Rejected Verse,' William D. Washburn, jr., (Knickerbocker Press), shows good reason in his pages for the rejection, but none whatever for the word "verse." None of the pieces are in any recognized metre, not even blank verse, and one of them, "Wherefore," is at best in Whitmanesque. Some of them are dated at Minneapolis, some at Chicago, others in Eastern cities, and they belong to the large class of so-called poems which are no poems. 'Sonnets and Lyrics,' by Katrina Trask (Boston: Badger), are perhaps strongest in neither of these departments, but in a series of striking short verses labelled "Contrasts," *e. g.* (p. 95):

A man and woman, steeped in ecstacy,
Murmur, 'mid kisses, "Merciful is fate!"'

Far off, one—who has set that woman free—
Dies lonely; and a maid waits, desolate.

'Songs from the Hearts of Women,' by Nicholas Smith (Chicago: McClurg), suggests the English origin of its compiler, not so much in the larger space given to the work of English women as in his apparent ignorance of the two most gifted women poets in this country, Emily Dickinson and Helen Jackson, both of whom wrote poems of profounder religious feeling and more inspiration than three-quarters of those authors whom he quotes. Their poems, if not always intended for hymns, needed much

less modification for that purpose than was administered to many in this collection by those competent editors to whose "changes" Mr. Smith refers in his preface.

Of recent dramatic poems, 'El Dorado; A Tragedy,' by Ridgely Torrence (Lane), must be pronounced a little too prolix, and the anonymous, attractive and graceful 'Mors et Victoria' (Longmans) not quite prolix enough. Alfred Austin's 'Flodden Field: A Tragedy' (Harpers) is a shade stronger than the average quality of his numerous works, but seems to leave the poet laureate's seat still unoccupied. 'Hephæstus, Persephone at Enna, and Sappho in Leucadia,' by Arthur Stringer (Toronto: Methodist Book and Publishing House), is well and thoughtfully executed, but rather meditative than dramatic in its tone.

Valentine Brown, author of 'The Chieftain and Satires,' (Portland, Oregon), apologizes for the abrupt termination of his satire called "The Pilgrims," on the reasonable ground that "the author at this time was taken with the grippe, and, under the influence of quinine, Alastor and Azrael refused to answer any more interrogatories"—a fact which is to be placed to the credit of those imaginary powers. 'The City of Is, and Other Poems,' by Frederic Milton Willis (San Francisco: Mercury Press) is a little book which, although inscribed to "California the beautiful, California the potentially, surpassingly intellectual and spiritual," might rather be inscribed farther back to the potent and sometimes very mischievous spirit of Poe. This inheritance shows itself in the very title, and still farther in poems like "Through the Valley of Nil" (p. 23):

Life smiled on the lovely Child
And led him with delicate finger-tips
Into the Valley of Nil;
And, kissing his voluted linger-lips,
Quickened his inchoate will.

He shrank from the peopling blank—
Turned back toward the glittering spangles
Of love-living light on the Hill
Just out of the tortuous tangles
Of the solaric Valley of Nil.

But the gradient, paved with irradiant,
Vacuous violet light,
Had shrunk to a slender rill
Of fluctuant spirit, to the sight
Of the Child in the Valley of Nil.

Somewhat remote from Poe, and inspired, perhaps, by the ambition to offer to younger poets a perilous example, is the following, in which both the rhythm, the structure, and the doctrine, whatever it may be, may fairly claim to be the author's own (pp. 74, 75):

What through the fiercely surging tidal impulse
of the underlying, turbid source
of incarnating and evolving soul,
a sea of germic frenzy,
Aspire vandalically—leap like fiend
of direst evil on the quiet soul—
lash it in a devilish rage—and then,
insatiate, lick with rabid passion-tongues
the lambent empyrean spirit-fire;—
Cannot the gentle flame insinuate,
with soft persistence, its fine, dividing and
disintegrating angles—nullify
by essence-comminution all the fury
of the limbic and matricial sea—
and, timeless, spaceless, pulse with purest light,
in primal legislative glory?

With this rather hopeless specimen of crossbreeding between poetry and prose, we may leave for the present the subject of Recent Poetry.

RECENT FICTION.

The Ultimate Moment. By William R. Lighton. Harper & Brothers. 1903.

The Daughter of a Magnate. By Frank H. Spearman. Charles Scribner's Sons. 1903.

Pa Gladden: The Story of a Common Man. By Elizabeth Cherry Waltz. The Century Co. 1903.

The Law of Life. By Anna McClure Sholl. D. Appleton & Co.

The Beaten Path. By Richard Lawrence Makin. The Macmillan Co.

A Master Hand. By Richard Dallas. G. P. Putnam's Sons.

The Pine Grove House. By Ruth Hall. Houghton, Mifflin & Co.

The Little Shepherd of Kingdom Come. By John Fox, jr. Charles Scribner's Sons.

The Heart of Rome: A Tale of the "Lost Water." By F. Marion Crawford. The Macmillan Co. 1903.

'The Ultimate Moment' is a study of the social and political life of Omaha, Nebraska. It is written with some bitterness and much energy of denunciation, as though the writer, having been compelled to live in this enterprising town, had determined to save others from the experience:

"At its best, Omaha is not a beautiful city. It is only a big, sprawling, swaggering example of what the Middle West has done along the line of crass 'enterprise'—overgrown, arrogant, extravagantly boastful over matters not worth boasting about, while forgetful of most of those things in which a city should take a reasoning pride; vain of its show of wealth, . . . vain of its miles of streets, without stopping to reflect upon the deeper meanings of a street; vain of its hundred thousand people, without greatly caring what their character and power of service may be. It is a town that, from the day of its birth, has never set for itself any worthy civic ideal. . . . Could anything be more artificial or more abjectly silly than to set about building a metropolitan city in the middle of these farms? A marketplace—that's all the farmers need here right now. They're supporting seventy thousand useless people just for the sake of being in the fashion and having a metropolis."

The politicians of Omaha to whom we are introduced are much like other corrupt politicians, East and West, but there seems to be some hope for the Omaha mob which is held back from a lynching by the hero of the tale, unarmed and single-handed, and presently melts away before an appeal to order and decency. David Boughton (the hero) leaves his farm for the tense life and ambitions of Omaha, and begins to read law in the office of one of the city's lawyers; there are three hundred of these, but no justice to be had in Omaha, according to Mr. Lighton. It must be a wearing life, to judge from the atmosphere of uncontrolable emotion which the hero encounters. This is how the sub-heroine receives her father's announcement of his political ambitions:

"She was trembling; her face had taken on an ashen pallor, save for two burning flecks of red in her cheeks; her eyes were feverishly brilliant. 'Good-night,' she said; and with that she was gone."

This is how her father receives a rather timid request for his daughter's hand:

"Watson sat dumfounded, his lips parted, his eyes staring. For many seconds not a nerve moved. The blood fled from his face, leaving it overcast with a gray pallor, then came surging back in a full red flood, swelling the veins into cords and bringing big drops of sweat to his forehead."

No wonder the hero is easily reconciled to returning to his farm and abandoning his ambitions for a brilliant career in Omaha. If the farm life of Nebraska is half as charming as Mr. Lighton's description of it, it is a sort of Western Arcadia, which, after all, owes much of its prosperity to the existence of the market town that he condemns.

'The Daughter of a Magnate' is a great improvement on Mr. Spearman's last novel, 'Dr. Bryson,' because, though it is fully as technical, there is nothing morbid or pathological about it. The author has Mr. Kipling's gift for getting up a subject and making the lay reader feel the romance of machinery for the expert. As usual, in novels of this type the love story is a mere thread, a concession to the conventions of fiction. It is typical of the New Romance that the heart of the heiress is won, not by feats of arms, but by triumphs of engineering on the mountain division of a Western railroad. From her father's private car she sees with her own eyes the disastrous chances, not of encounters with the insolent foe, but of washouts and blizzards, experiences fully as moving as those the tale of which enchanted Desdemona. The hero is a rising young engineer who, in the discharge of his dangerous duties, breaks both arms and two ribs and blows himself up with a dynamite blast, all in quick succession; one must use one's expert knowledge of surgery, so abused in 'Dr. Bryson.' Nothing east of Pittsburg is even hinted at in 'The Daughter of a Magnate.' It is a romance of the West, of flooded roadbeds and delayed fruit trains, and the awful responsibilities of the train-dispatcher who has forgotten the "special" that contains the heroine. But it is true romance, a romance of stern adventures from which one might cut out the love story and sacrifice nothing; the hero's adventures with an engine in a blizzard being far more thrilling, especially when he encounters a flock of frozen sheep, than any incident of his wooing. Mr. Kipling is the acknowledged master of this style of writing, but Mr. Spearman has the advantage of a simpler and less crowded vocabulary, and leaves the impression of out-of-doors rather than of the engine room. The novel of action without a hint of psychology is not to be despised in the day of modern fiction that neither entertains nor lets one into the secrets of a great craft.

The late Mrs. Waltz's 'Pa Gladden' is a series of short stories, or rather sketches, of country life which derive a sort of unity from the personality of Asahel Gladden, a childless farmer whose shrewdness and large heart make him the friend and benefactor of the whole countryside. The country described seems to be that of the Ohio Valley, but the people and their ways would be as much at home in New England as in the Southwest. In spite of the dialect, there is something attractive about these sketches of a homely life and its tragedies; the latter are numerous and varied enough to give full scope to Pa Gladden's philanthropy.

'The Law of Life' is a story of a co-educational university not a thousand miles from New York in a city called Sparta. A ravine, waterfalls, bridges crossing the gorge, pine forests, and a stream creeping through the valley to join a lake are prominent factors, even actors, in the scenery. Thus he who reads, though running, may infer from this foot the identity of the Hercules. First to notice in the story is the homage laid at the feet of Alma Mater from the point of worship of one who smiles

at undergraduate crudities of enthusiasm, only to dwell the more intensely on the deep, adoring affection of professors and graduate students. The college is the real heroine of the story, fought, bled, and sighed for by her lovers, male and female. The masculine lovers have been better differentiated than the women. The President, courteous and steely, composed of soft and hard qualities, together with "the something that makes him Dr. Hunt"; the mathematical professor, emerging from his calculations only long enough to marry; the boyish professor of chemistry with his genius for friendship; Waring, the hero, ex-war correspondent and journalist, chivalrous knight to Alma Mater and all ladies, are drawn with entire definiteness. Far less so the women, in spite of their much too much described gowns and their varying teacups and house furnishings. The reader has to stop to think whether it is Allaire, Perdita, Helena, or Mrs. Maturin who is speaking, even though to one has been assigned the part of inconsolable widow and to another that of invincible maiden. There is one unusual trait about them, however: the traditional cat is conspicuously absent. There is only one woman who thinks or says feline amenities, and even hers are hardly more than those of a kitten with an assertive sense of its birthright. Co-education is seen to have made all men and women kindly. Every interest and every standard is intensely modern. Petty jealousies have yielded to the higher education; great ones, in their clashing, use no mediæval weapons. Barbara does not even think of eloping from her husband (guilty of nothing but old age and mathematical absorption) with the man to whom she really "belongs," but is strongly tempted to "take the clean, straight course—to be divorced from him and marry his friend." That this clean, straight course is relinquished will be a matter of gratification to the reader, who will further wish that something less vague than "instinct" had made Barbara decide upon her conduct. That, too, is modern, and partakes of the modern novel's trend, whereof the motto is, "Please omit ideals of conduct." Opportunity or habit determines everything. It remains to be glad when opportunities are innocuous and habits good. In the present book every moral issue is met with indeterminateness—the great present-day novel's personal equation. Even the professor who is martyrized because he opposes the gift of wrongly acquired money, slips into his martyrdom by a sort of fluke at the last. Kind hearts in fiction have grown to be more not only than coronets, but than simple faith.

The mixed motive, however, as we all know, is one of Nature's ironies, and in this book is compounded with much high thinking into an interesting story. In the main it is well told. There is an excess of detail, and there are some annoying uses of pet words which are degraded by such treatment into mere slang. One is "challenging," which appears at every turn, achieved by eyes, ears, tongues, in tragedy and comedy, for better and (still oftener) for worse. A young man's desire to cheer a season of gloom with a Platonic flirtation is called "a sudden longing for iridescence." At the same time coeducation does not deter even the President from the misuse of his wills and shalls, nor the widow from "fixing" a cup of tea. As for the use and abuse of the dash, the pages look like the old-fashioned telegraph language, and read like asthma. On the other hand, there occur such epigrams as this: "To the provincialism of the higher culture she opposed the cosmopolitan feminine."

The heroine of 'The Beaten Path' has far more reason than Barbara for wishing to leave her husband, but looks higher and farther than to instinct for a guide, and may therefore be considered a more valuable witness in the case of "Divorce versus Fidelity." The story deals with conditions of the Labor Movement as modern as those of Coeducational Universities, while its manner is in respiting contrast to the impressionistic style on one side and the overelaborated on the other. Its leisurely air, as removed from rush as from stagnation, is almost old-fashioned, bringing up memories of the English school of novels which produced Mrs. Gaskell and culminated in George Eliot. 'The Beaten Path' has not the captivating interest of the one, certainly not the sustained philosophy of the other, but it deals with labor agitations and with humanity's complex frailties in a spirit worthy of both, although on a more modest level and under the more dingy light of a later industrial development. "Sweet commentary on the times we live in," says the hero; "questions of right, questions of decent fairness, of simplest justice, put on the shelf, while we fight for the fundamental principle of civilization." The actors in the play, even those who work for good, are of widely differing creeds and ideals. Here is a rector to whom the church is a living force and the only one that avails to save; here a workman preacher with "the enraptured devotional loyalty of a servant to a beloved Master"; here a man of intellect and means giving his service to what he finds "within his soul and tests in the crucible of his own brain." The powers of darkness have their varying shades and shapes as well, embracing the political trimmer, the conscienceless promoter, the shady attorney, the domestic deceiver. There is small allowance of poetic justice. The reader must rest content with seeing the ravelled ends left dangling as in real life, while the characters cling desperately to their standards. While this cannot be quarrelled with on the ground of improbability, it serves, with the attendant quality of diffuseness, to make the book fail by a narrow margin of being a rarely good novel. Even as it stands, with every drawback noted, it is a story of unusual sincerity and clarity, told in unusually sincere and clear English.

Mr. Dallas's way of telling a story is very good. If an undue reverence for the blessed word "whom" has led him here and there to murder grammar, his treatment of murder is gentlemanly and tactful. His story is of assassination and mystery in New York twenty years ago, with disagreeables reduced to the lowest terms. The object-lesson is the ever-captivating one of the untrustworthiness of circumstantial evidence except, as the author judicially remarks, "when such evidence is conclusive." It would be crime to reveal the secrets of the case, but 'The Master Hand' is sure to please lovers of a detective story that shall not unduly harrow while it will strongly interest, being founded in possibilities and built up with ingenuity.

'The Pine Grove House' has the merit of an original background. This is a vulgar boarding-house in the country near New York, with its winter patrons and its summer ones, and a third estate added in the all-the-year-round aristocracy of the neighboring villages. Miss Hall's opening sketch of this dreary resort and all her picturings of its manners and practices are excellently dismal. The story, however, is fidgety in both construction and expression. The characters are better planned than executed. The patrician girl is too nice to be so unduly prostrated by her surroundings; the patrician hero too debonair to be so melodramatically demonstrative of his entire indifference to sordidness, so patronizing of the sordidly imprisoned fair, whether he is telling her he deeply respects her, or snubbing the rich village aristocrats who snub her, as in a duke-and-governess novel. The movement fusses with exits and entrances like the stage directions for a farce, and the language catches the infection. We offer a specimen: "To Amy came, as grievous in a measure, the realization that this she felt at sight of Helen was akin to the stir of that midsummer dream from which (there was the point) she had awakened." It is not all as bad as this. Some things are well put, as in the case of the old lady who "did like to be muched," and in the characterization of "the slightly contentious and rather disquieted type of much American aristocracy." The story is harmless, quite harmless, and every girl who reads it will want to know how it comes out.

'The Little Shepherd of Kingdom Come' is not an undersized clergyman, in spite of the anticipations raised by the title. He is a boy with a sheep dog: one who lived on the river Kingdom Come; one who was descended from the earliest settlers of Kentucky, and whose destiny was to fight for freedom as his ancestors had done before him. No one writes of Kentucky better than Mr. Fox. He forces one to take to heart the lineage of that pioneer race who, after the Revolution, found their way into the mountains from Virginia. He invests the Blue Grass Country with a charm which makes for the time a Kentuckian of every reader. As local history and geography, nothing could be better. His story dallies by the way, but is full of a touching interest. When it comes to the civil war, there is a splendidly effective showing of the unique position held by Kentucky, with its divided opinion, its varying occupancy, its Home Guards and State Guards, its guerrillas and provost marshals. The very phrase, "Blue Grass Yankees," is a volume of war history. Those who remember the war, those who forget and those who never knew it should read this book, and will cherish it, being forewarned that the story occasionally gets in the way, that several of the characters are entirely conventional, and the hero himself only too highly endowed. He alone, when a mite of a boy, observes the schoolmaster's love affair; he alone with his little dog can round up the old farmer's sheep; he it is who proves the dog's innocence, on an occasion of sheep murder, by knowledge transcending that of judge and jury; he can give the major points on shooting, and is to the Bluegrass boys an example of horsemanship. Girls refuse officers for him, colonels smile on him, Gen. Grant wants him.

It is a tribute to the essential charm of the portrait that with all his perfections he is easily lovable even to the reader. We must expect the familiar girl type of Southern story. Here she is, beautiful and brave, insulting and cajoling, with no variation from any of her sisters. The stern general and bluff major may be recognized at sight. Why do majors always "roar"? Mr. Fox pays Mr. Hopkinson Smith the homage of imitation in associating in his story a "Major" and a "Chad." We commend and recommend this as a high and gentle tale; a valuable mirror, too, of a thrilling time.

Mr. Marion Crawford's latest romance has no pretensions to be founded on fact, nor does it owe its interest to any possible identifications with living persons; it is merely a love story, interwoven with the finding of an archæological treasure and the mysterious course of the "lost waters" about which so little is known. These waters, we are told, often rise in different places in Rome, sometimes abundantly enough to impede the laying of foundations of modern buildings; they appear at different levels, coming from some unknown source, and finding their way to the Tiber, rushing through deep hidden passages. They have never been scientifically accounted for, but here and there some Roman mason, whose forefathers have practised the same trade, pretends, and is therefore believed, to possess secret knowledge of the course of the "lost waters," and in this tale the Roman mason Toto uses his knowledge for purposes of revenge. The dramatis personæ of Mr. Crawford's romance have nothing in common with the complicated creations of modern fiction, in which there are many wearisome problems to solve and very little happens; his story runs on with unflagging interest, and his characters behave under the impulse of quite comprehensible motives, exactly as the least imaginative reader might expect them to do.

The story opens with the ruin of the Conti family, and their hasty departure from Rome, leaving the youngest daughter, Donna Sabina, under the care of the Baroness Volterra, who has offered her a home, on the snobbish supposition that her own position in Roman society will be thereby on a firmer footing. The ancestral palace of the Contis falls into the hands of Baron Volterra, her husband, a successful financier of great smartness and lax conscience, who, wishing to realize the utmost profit on this investment, commissions an intelligent engineer to examine the substructure of the palace carefully in search of a hidden treasure supposed to have been buried there in past centuries, but which was not believed in by the family. Malipieri, the chivalrous young Venetian engineer chosen for this work, makes the acquaintance of Donna Sabina, and, touched by her dependent position, resolves to find the treasure, and to frustrate the Baron's plans by first confiding the secret of its discovery to the young girl and helping her to put in a claim for her part of her patrimony, of which her family had in their extravagance and selfishness defrauded her. He therefore sets about the work with secrecy, aided only by his servant. The rushing of the "lost water" is constantly heard, and there are indications of its having flooded the vaults in past times. Malipieri discovers a colossal statue of gilt bronze walled up in a separate vault, but meanwhile the mason belonging to the palace, Toto, hears from outside the knocking down of the wall and creeps in through a disused drain to see what is going on. He is found in the niche with the treasure by the disconcerted archæologist, who locks up Toto in his own rooms in the palace. The man escapes out of the window while Malipieri is showing Donna Sabina, who has eluded her chaperone, the Baroness, for an hour or so, the statue in the vaults of her ancestral home. This is the culminating moment of the story; for while Sabina and Malipieri are examining the treasure, the revengeful Toto, who possesses from his father the secret, turns on the lost water and floods the vaults, so that the young people are cut off from the upper world and in danger of death from starvation or drowning. We leave Mr. Crawford's readers to find out how all came right in the end. His fidelity to nature in showing the working of the Roman mind, from the prince to the workman, is admirable throughout this story, which is written in his usual style.

The Horsewoman. By Alice M. Hayes. Charles Scribner's Sons. 1903.

This volume is edited by the husband of the authoress, Capt. M. H. Hayes, who himself is a book-maker of a quite modern type. It is one thing to write in an original manner an interesting and clever book, but a very different thing to multiply volumes under various titles. However, the public at large continues to be deeply interested in everything regarding horses and riding, notwithstanding the pretended superiority of the "Red Devil" and other forms of horseless vehicles. The bicycle has come, and, after a brief period of wonderful popularity during which dire predictions were made as to the decadence and disappearance of the horse, has itself nearly passed away, except for commercial transportation of messenger boys and the like. The horse is coming back to his own, and we can forgive a well-padded book, neatly printed and with clear illustrations, because it tends to revive interest in honest horsemanship.

Mrs. Hayes is quite right in advising that girls be taught to ride early in life, for women past thirty years of age, having lost the pluck and dash of youth, find much difficulty in mastering the subtleties of balance and grip, and are afflicted with a nervous anxiety which tends to give them an appearance of stiffness and general discomfort in the saddle. To ride well and safely, any woman needs a good, well-trained horse; young and untrained animals should at all times be avoided. The requirements of a good saddle-horse are aptly described by Mrs. Hayes. She does not propose to do away with the side-saddle. Not all women are physically constructed so that they can ride comfortably astride; on the other hand, a considerable number of men have such conformation that they would be more comfortable in side-saddles than they are in men's saddles. All depends upon the shape of the hips and roundness of the inner thighs. A round inner thigh is devoid of gripping qualities which are absolutely essential to secure comfort of seat in a man's saddle. Mrs. Hayes has introduced in this volume what she designates as a safety skirt; but women are prone to follow the fashion of the hour in their riding skirts as well as in other tailor-made garments.

It requires considerable instruction and attention for the average woman to maintain her seat upon a horse so as to produce an equal distribution of weight. Mrs. Hayes advises that this can be obtained by avoiding the use of too long a stirrup, and by sitting a little over on the off side, so as to place the weight as much as possible over the line of the backbone of the horse. The woman rider, like the man, must mainly depend upon keeping her position in the saddle by balance and grip, though, of course, the man has more opportunity for the use of both than the woman rider on the side-saddle. Advice is given on the use of the hands, voice, whip and spur in connection with the seat. Lessons in riding prescribed for the walk, trot, canter and gallop and cross-country are all very well in an advisory way or for finishing off a practical education, but it would be wise for the beginner not to depend too much upon book instruction in learning to ride. A considerable portion of the volume is devoted to the hunting field, its pleasures and dangers for the woman.

Mrs. Hayes devotes a chapter to riding difficult horses, which is all very well for her and her horseman husband, but women should be careful to avoid any animal known to be a difficult horse. There are too many ways of showing courage in life, and too many duties of a high order expected of the modern highly educated and refined woman, to justify her in risking life and limb on bucking, shying, and bolting horses.

The Alien Immigrant. By Major W. Evans-Gordon, M. P. London: W. Heinemann; New York: Charles Scribner's Sons. 1903.

Sir Walter Besant's book on East London reminded us incidentally that we are not the only country confronted with the problem of alien immigration. Major Evans-Gordon now shows us in detail how serious the situation is becoming in England. His introductory section concerning the conditions in London would need only a few changes in names and figures to describe those with which we are familiar in New York. We hear of the "Ghetto habit," which prevents the dispersion of Hebrew aliens in the country; of the gradual driving out of the old population; of the transformation of dwellings and gardens into workshops; of the raising of rents 50 to 100 per cent. through the pressure of the newcomers; of the lowering of wages and of the standard of living; of the use of the local schools to make more effective the competition of alien with native labor; and even of an occasional racial riot, indicating a strained feeling between Jew and Gentile. "East of Aldgate," remarks the author, "one walks into a foreign town," and he further tells us that, when visiting the towns of western Russia within the Jewish pale, he was surprised to find himself in the familiar surroundings of the East End. "The life, the language, the people, the shops, and their contents were the same." A grievance on which special stress is laid is the effect of this invasion upon workingmen compelled by their employment to live within a certain area—the porters at Spitalfields Market, the dock laborers, etc., who are practically ruined

by the high rents resulting from alien overcrowding. There is no true analogy, it is contended, between the difficulty in East London and that in Russia and Rumania, where industrial openings could be found for tens of thousands of Jews without detriment of any kind to the rest of the population.

Major Evans-Gordon's conviction of the urgency of the question impelled him in the summer of last year to make personal inquiry into the immigration movement in general. He therefore spent several months in investigations at such centres as Dvinsk, Riga, Libau, Vilna, Pinsk and the neighboring villages, Warsaw, Lodz, Cracow, and Bucharest, and afterwards inspected the machinery for the forwarding of emigrants at Hamburg. He has thus produced a very instructive picture of the life and status of the Continental Jew, especially on the industrial side. In view of the intellectual ambition of the children of aliens in America, it is particularly interesting to read the author's testimony to the desire for education as one of the chief incentives to immigration. Obviously this section of the book is worth as much to American as to English readers, and the chapter on "Persecution" will be of special value, as bearing on the representations which our Government has made, and may make, respecting the treatment of the races and classes from whom our immigrants are largely drawn.

Major Evans-Gordon's inquiries, though of historical and scientific value in themselves, have also a distinct political purpose. The whole book is a plea for legislation fulfilling the recommendations of the Royal Commission on Alien Immigration, of which the author himself was a member. One may reasonably doubt, however, whether the adoption of American methods of restriction is quite feasible in England, where the smuggling of undesirables would be a much easier matter than it is here. But there certainly seems no valid argument against the establishment of a Department of Immigration, or against the proposed exclusion of newly arrived aliens from residence in any area which is officially pronounced to be already overcrowded. The startling information given by the writer respecting the large number of criminal and vicious aliens—in London, he says, from one-half to two-thirds of the traffic in vice is conducted by foreigners—strongly supports his advocacy of the further provision for the deportation of such aliens as within two years of arrival are found to be criminals or of notoriously bad character.

History of Concord, New Hampshire, from the original grant in Seventeen Hundred and Twenty-five to the opening of the Twentieth Century. Prepared under the supervision of the City History Commission, James O. Lyford, Editor. [Concord, 1903.] Two volumes, pp. 1477.

This work, handsomely printed and illustrated in good taste, is a model of its kind. Certain citizens of the capital city of New Hampshire, interested in the object of preserving a correct history of the town and city, came together and formed a commission. This body was legalized by vote of the city authorities, who appropriated $2,500 as a loan of the city's credit. The amount later was more than met by voluntary subscription, so that the city has been put to no expense. This historical commission had at least two hundred and fifty meetings. As a result, a composite work of a most creditable character is added to the list of New England town histories. A general narrative of more than 500 pages is contributed by Amos Hadley. Other writers have furnished papers upon special topics, altogether well written and readable. Combined with a unity of purpose, one finds here sufficient diversity of style to invest the pages with a literary as well as historic value. The book is a monument of labor performed by most willing and competent hands and in a spirit of complete harmony. It is a pleasure to note the good will thus existing among the people of a community. Concord has reason to be proud of this memorial, which is, by the way, wholly free from individual or business puffery.

There is a full index of subjects and of names. The proof-reader has done his work thoroughly; and if there are blemishes, they do not readily meet the eye. We note, however, on page 713, that the name of the venerable minister at Newington, N. H., who served the people there for sixty-eight years, is given as "John" Adams. It should be "Joseph." He was an uncle of President John Adams.

An entertaining chapter is "Canals, Stage Lines, and Taverns," by Henry McFarland, and we cannot do better than confine our extracts to it:

"Along the countryside, the stageman was regarded as holding a good place among worthies of the time. He could tell to loitering villagers news and gossip from tavern firesides in the larger lower towns. Perhaps Daniel Webster, Jeremiah Mason, Ichabod Bartlett, or George Sullivan had sometime been passengers in his coach, and he had spoken with some familiarity with those great men, or he had exchanged polite salutations with Dudley Leavitt, Prof. Edwin D. Sanborn, or the Governor of the State. Judges going up to hold court sat beside him, and held the reins while baggage was landed at wayside inns. Perchance he had clinked the social glass with Philip Carrigain, Esquire, and wished him success in his errand at Hanover. On the sightly highest seat of his yellow coach, rustic beauties, going home from service or from school, with handsomer faces than those depicted by the skilful hand of the Concord painter on the panels of the coach, perched where the long whiplash made its surprising whirl past their sunbonnets before it shot forward to make its still more surprising crack behind the ears of the leaders on the six-horse team. Schoolboys by the roadside swung their caps to the driver, and echoed his cheery whistle to the horses. The village blacksmith and saddler came to the fore wheel to take his orders when he drew rein. All the countrymen deemed it worth while to be on good terms with him, because he knew about their horses, and from his opinion as to what a likely animal would bring at Concord or Portsmouth there was no appeal" (p. 851).

Laura Bridgman: Dr. Howe's Famous Pupil, and What He Taught Her. By Maud Howe and Florence Howe Elliott. Boston: Little, Brown & Co.

The rapid progress of instruction among the deaf, dumb, and blind, and especially the remarkable gifts and qualities developed in Helen Keller, have naturally turned public attention back upon the earlier stages of this great philanthropy, and incidentally upon the pupil to whom it was first applied, Laura Bridgman. Dr. Samuel G. Howe, during the forty years that passed between this great triumph and his death, never found leisure to put his most conspicuous achievement in writing, and it is a very fitting thing that two of his daughters should now do the work for him. The details of the process which rescued this class of human beings from life-long darkness and almost despair, are here clearly presented from their father's written memoranda and in an admirable way.

The vast difference between the results obtained from Laura Bridgman and from Helen Keller are partly due to the progress of the age, which had, for instance, developed Radcliffe College for the latter's higher training. They are, however, due partly, of course, to that touch of individual genius which is personal in Helen Keller. To this are added some further individual differences, now for the first time made public, between the two careers. Thus, we now first learn that Laura Bridgman's life was shadowed for ten years by one of the old-fashioned and rather formal religious conversions, when her very soul was darkened by the fear of an angry God, and when Dr. Howe himself said that "he had difficulty in recognizing the girl whose clearness and simplicity of mind had so fascinated him, in this conventional and professing sectarian" (p. 286). From all this shadow Helen Keller fortunately escaped under the benign influence of Phillips Brooks and men of kindred spirit; and this fact, combined with singularly happy influences from her immediate companion, Miss Sullivan, have made her life, as it has made her face, far more joyous to contemplate than was that of her predecessor.

The simple fact undoubtedly is, that among the deaf, dumb, and blind there will be found as great a variety of temperaments as anywhere else. Even in Laura Bridgman's day Dr. Howe encountered in England a girl to whom he gave some half-dozen lessons beginning with the manual alphabet, and of whom he records that "she made more progress in two hours than Laura Bridgman did in two weeks" (p. 380). In reading Helen Keller's autobiography, one ceases to think of her as a blind deaf-mute, but rather thinks of her as one who, if she had possessed all the ordinary faculties, and so labored under no picturesque disadvantages, would still have written an autobiography eminently worth reading. That fact only makes this memoir of Laura Bridgman more valuable, as explaining those steps in education from which both these exceptional careers began. Intellectually speaking, both were the offspring of Dr. Howe, of whom this book will always remain one of the very best memorials.

Caliban's Guide to Letters. By Hilaire Belloc. E. P. Dutton & Co.

Satire, personal or general, is a feeble sort of expression unless the satirist is morally and intellectually superior to the person or thing satirized. If Mr. Hilaire Belloc possesses such advantages over the persons engaged in his own trade—the trade of producing reading matter for the daily press, for weeklies, and monthlies—he shows no sign of them in his collection of satirical papers on these persons and the rest of the machinery of production. Sometimes he is faintly funny, as in the article

on reviewing, but more often he is just foolish, as in the article on special prose. When he attempts to satirize Mr. Kipling, Mr. Chamberlain, and the British empire, the subjects are so far beyond him that his words are but the squawks of an infuriated parrot. His last chapter describes the ultimate destiny of many books, of most novels, hurried away by tons to the pulper's vat, there to be crushed and boiled and cleansed until they are reduced to a white paste, which, passing through several processes, again becomes paper. This chapter is instructive, and may be accepted as a literal statement of fact. There is appended an index of books that Mr. Belloc predestines to the pulpers within a year of publication. 'Caliban's Guide to Letters' is not included; but Mr. Belloc doubtless knows that its doom is written.

JUST PUBLISHED

The Nemesis of Froude

Everyone has been hearing of "The Carlyle Controversy," though few have had time to follow it in the profuse publications on the subject. It concerns the clearing of Carlyle's magnificent and beautiful character from the baseless charges of his executor and original biographer, JAMES ANTHONY FROUDE. The whole subject, interesting and enlightening in the extreme, to broad minds, is now summed up and closed finally in one decisive volume of less than 200 pages, admirably written, by Sir JAMES CRICHTON BROWNE and ALEXANDER CARLYLE.

8VO, BUCKRAM. $1.00 NET

Everyone must read this who wishes to preserve in his mind the correct image of the personality of the greatest Anglo-Saxon philosopher of the XIXth century.

LYON & HEALY, 91 Adams St., Chicago

BOOKS OF PERMANENT VALUE

The Life of Voltaire

By S. G. TALLENTYRE, author of "The Women of the Salon," etc.
Two volumes. 8vo, with numerous illustrations. Net, $6.00.

The narrative of the life and work of a man who, perhaps more than any other of his century, influenced the opinion of Europe. His keen analysis of the institutions and opinions of the day, his absolute fearlessness in regard to certain existing things which seemed to him to be wrongs, his enormous fund of wit, and his great force of expression have persisted as an influence in the literature of the years succeeding his own.

The Nature of Man Studies in Optimistic Philosophy

By ELIE METCHNIKOFF. Translation and introduction by P. Chalmers Mitchell, Secretary of the Zoological Society. 8vo. Illustrated. Net, $2.00.

It is not often that a scientific book may be read with ease, profit and pleasure by the general reader, so that M. Metchnikoff's book comes in the nature of an agreeable surprise. It is marked by a refreshing *naïveté* and a large simplicity which are characteristically Russian. The scientific importance of this work is so great that it is spoken of in England as the most valuable production since Darwin's *Origin of Species*.

The Art of the Italian Renaissance

A Handbook for the Use of Students, Travellers, and Readers. By PROFESSOR HEINRICH WOLFFLIN of the University of Munich. 8vo, with over 100 illustrations. Net, $2.25.

This book is designed for use as a handbook for students and all lovers of Renaissance Art. It will prove valuable for travellers in connection with the masterpieces which it describes; and the profuse and beautiful illustrations, with the careful explanations of the text, will bring Italy to those who wish to enjoy from their homes the wonders of the Italian Renaissance.

Rome and the Renaissance

The Pontificate of Julius II. Translated from the French of JULIAN KLACZKO, by JOHN DENNIE, author of "Rome of To-day and Yesterday," etc. 8vo, with 52 full-page illustrations. Net, $3.50.

The charm of this book is its strong personal element. The author has lived with his subject and lived with it many years, with the result that he has written a book of particular originality and absolutely fresh interest, although the subject is familiar.

NEW YORK—**G. P. Putnam's Sons**—LONDON

'The Art of Living Long'

The Famous Work of LOUIS CORNARO, the Venetian Centenarian. Translated and Edited by William F. Butler

Louis Cornaro, who fathomed the secret of longevity more effectively probably than any other person, is a character unique in history. Though possessed of a delicate constitution from birth, his life despaired of by physicians at forty, he lived to fully set forth at the ages of 83, 85, 91 and 95 the methods whereby he secured that complete mental and bodily power which was always at his command until his death at 103—the first to reduce the science of simple living to a system.

A few TESTIMONIALS from those who have received advance copies:

"A deeply interesting book."—THOMAS BAILEY ALDRICH.

"I think you have rendered a great service to your countrymen in translating and publishing this valuable work"—U. S. SENATOR WM. B. ALLISON.

"You have, to my mind, done a distinct service to the American people by putting within their reach a copy of this fine old man's tract on living."—EDWARD BOK, Editor *Ladies' Home Journal*.

"The papers are filled with discoveries made by distinguished scientists in the art of living long and healthily, but none of them has yet developed a secret so plain and simple as that of Cornaro."—U. S. SENATOR CHAUNCEY M. DEPEW.

"The Art of Living Long" is a valuable and curious book, and contains a good lesson."—LUCIUS F. C. GARVIN, Governor Rhode Island.

A handsome illustrated volume containing the only portrait of Cornaro. Full cloth, gilt top, etc. AN IDEAL CHRISTMAS GIFT. Price, $1.50, prepaid. For sale by booksellers, or will be sent upon receipt of price by the publishers.

Senator Hoar's Autobiography of Seventy Years

NOT only for its political importance, but for the unusual personal, social, and literary interest of the reminiscences it brings together, Senator Hoar's autobiography will be the most notable contribution of the year to memoir-literature. It would be impossible to find another man in the country who has known more of the important men and measures of his time than Mr. Hoar; and the charm and piquancy of his style, with its range, from the eloquent discussion of his political principles to the humor of his anecdotes, are as remarkable as his experiences. The book is refreshingly frank and full of character and individuality—a record of opinions as well as events.

For Sale Everywhere on November 21. Price will be $7.50 net.

JUST PUBLISHED

THE UNITED STATES in our OWN TIME

A History from Reconstruction to Expansion

Being an extension of "A History of the Last Quarter Century," by **E. Benjamin Andrews,** Chancellor of the University of Nebraska and sometime President of Brown University. One thousand pages, with nearly five hundred illustrations. Large 8vo, $5.

The great popularity and authority of this standard work has led to its extension to cover the entire period from the reconstruction of the Union to the new expansion of our territory—1870-1903. Besides forming the only existing minute history of the country in our own generation, and furnishing an unequalled aid to the memory of men now in their prime, it covers in the fullest manner the information most desired as to the immediate present.

Two New Editions at decreased prices

The Book of the Courtier

Translated from the Italian of Count Baldesar Castiglione

By L. E. Opdycke. With 12 reproductions of contemporary portraits. Small quarto, $4.00 *net.*

A new edition of Mr. Opdycke's scholarly translation of this famous work at a price placing it within the reach of all.

Rembrandt

HIS LIFE, HIS WORK AND HIS TIME

By Emile Michel. Edited and prefaced by Frederic Wedmore, and translated from the French by Florence Simmonds. With 76 full-page illustrations, of which 8 are photogravures. A new edition in one volume entirely reset. 8vo, $7.50 *net.*

OF

GENERAL JOHN B. GORDON'S Reminiscences of the Civil War

the *N. Y. Evening Sun* says:

"The tone of the book is genial, magnanimous and tolerant; the style unaffected, luminous and often eloquent. One thinks of John B. Gordon as a virile and lovable character. It was a fine thing for a man to bear himself so worthily in the great war; it was finer to write about it so sweetly and fairly in the decline of life—'nothing extenuate, nor set down aught in malice.' Every American should read General Gordon's book. He will be a better citizen for it, and it will be a tonic to his patriotism."

Cyclopaedia of Architecture

In Italy, Greece, and the Levant

Edited by WILLIAM P. P. LONGFELLOW. A new edition, with all the many illustrations (except the photogravures) of the $25 limited edition. Large 8vo, $6.00 *net.*

This elaborate and authoritative work, the value of which the *American Architect and Building News* declared was "almost incalculable," is now placed within reach of all. As a book of reference for students, the *Atlantic Monthly* described it as standard; the *Nation* gave it the highest praise, dwelling upon the impartiality of its criticism; the *New York Tribune* acclaims its permanency and authority.

American Myths and Legends

By CHARLES M. SKINNER

Mr Skinner will be remembered agreeably by his former volumes, "Myths and Legends of Our Own Land" and "Myths and Legends Beyond Our Borders." The present volume contains the result of careful study of a large number of legends, some familiar and some scarcely known at all, which relate to the United States. The new volumes have red letter title-page and photogravure illustrations.

Illustrated. 2 volumes. $2.50. net; half morocco, $5.00, net. Postage extra.

The Real Dickens Land

With an Outline of Dickens' Life.

By H. SNOWDEN WARD and CATHARINE WEED BARNES WARD

The authors of the present book have sought to bring out conspicuously Dickens' intimate knowledge of the character of places and of the important effect of place upon the human being. Almost every page in the book carries a reproduction from an excellent photograph of some bit of country, some nook or corner, some gate-way or room which was intimately associated with the life and work of Dickens.

Illustrated. Square 8vo. Decorated cloth, gilt top. $3.50, net.

Through the Gates of Old Romance

Edited by W. JAY MILLS

This book covers the early life of all the colonies. It is by the author of "Historic Houses of New Jersey," who also was the editor of "Glimpses of Colonial Society and Life at Princeton College, 1766-1773." There are ghost stories and love stories, and stories of adventure, and all are told with a freshness and vigor which make them peculiarly readable. The volume is illustrated with delicate drawings by John Rae.

Illustrated. 8vo. Decorated cloth. $2.00, net. Postage extra.

The Carlyle Country

With a Study of Carlyle's Life.

By J. M. SLOAN

The volume represents the careful study and use of a large amount of what is practically new material regarding Carlyle's life, as well as of a great number of portraits and views of places of the same associations which never before have been shown. The binding and printing, as well as the illustrations, of the book are particularly notable. There are added an appendix, a chronology, and an index.

Illustrated. Square 8vo. Decorated Cloth, gilt top, $3.50. net.

The Story of Nell Gwyn

By PETER CUNNINGHAM. Edited by Gordon Goodwin

A companion volume to the two volumes, "Memoirs of Count Grammont." The illustrations are notable—fourteen full-page plates in all.

Illustrated. 12mo, cloth, gilt top, $2.00, net.

Newly Revised
Monsanto & Languellier's Practical Course in Spanish
$1.25
Revised by FREEMAN M. JOSSELYN, Jr., Assistant Professor of Romance Languages in Boston University.
For many years this has been one of the most successful Spanish grammars before the public. It aims to make the basic principles of Spanish grammar familiar to the student by constant practice and repetition in Spanish, and to this end the Spanish examples are made as numerous as possible. The advance in linguistics, and the new rules of accentuation promulgated by the Spanish Academy, have made a revision of the book necessary. The original form of the work has been retained so far as possible, but such grammatical statements as needed change have been recast. The Spanish text is presented in accordance with the latest rules for orthography and accent.

*THIRD EDITION—**23d Thousand**—PREPARING*

Mr. JOHN MORLEY'S Life of William E. Gladstone

In three 8vo volumes, with portraits, etc. Cloth, $10.50 net

"It is a great task greatly achieved, a grand portraiture of a grand subject on a great scale and in a worthy style."
—*The Spectator*, London.

"A masterpiece of workmanship, with more than the fascination of a novel."
—H. W. Lucy.

"If the year were otherwise barren of important books, if nothing else appeared which the world would not willingly let die, the 'Life of Gladstone' would give rich distinction to this publishing season. * * * We know of no other book in which one gets a better notion of how history is made."
—*The Evening Sun, N. Y.*

"The volumes show a powerful intellect and a practised hand, controlled by the loftiest principles, at work upon a great theme in a spirit of absolute impartiality."
—*New York Tribune.*

Published by **THE MACMILLAN COMPANY** 66 Fifth Avenue, New York.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 19, 1903.

The Week.

From Washington, "on high authority" comes the intimation that the Panama muddle is to be settled this way: the United States will pay to the Republic of Panama the $10,000,000 fixed as the price of the canal strip by the Hay-Herran treaty; the bantling republic will then turn over the millions to Colombia as the price of undisturbed independence. As a corollary to the scheme, it appears that we are to take from the Republic of Panama whatever we choose. Against the beautiful simplicity of the plan it might be urged, first, that since $10,000,000 seemed an insufficient consideration for ceding control of that canal strip, it is an insultingly low figure for the loss of the entire Isthmus; next, that the pains of receiving the bonus and conveying it as a solatium to Colombia would be more cruel than any the Panamanians ever suffered under the tyranny of Bogotá; finally, that we really need not pay anything for the canal. The French company has rights that we must respect, but why should we pay Colombia for letting Panama go? Why give Little Americans a chance to say that we are paying "conscience money"? So our full-blooded expansionists will reason. It would be better to employ the typographical device so engagingly advocated by the *Sun*, and read the $10,000,000 entirely out of the treaty. Thus—for $10,000,000 read $00,000,000.

We are glad to see the *Tribune* pitching into President Marroquin for his ignorance. You cannot be too severe upon a man you have robbed, when he shows that he does not even know how to demand his money back. The idea of such an international *faux pas* as a direct appeal to the American Senate by the President of a foreign country! It is enough to make the blood of a trained diplomat run cold—or, at any rate, colder. Really, it is difficult to be patient with Marroquin. Has he never been cheated before, that he should display such ignorance of his remedy? He ought to have known that no American could pardon so gross a breach of international etiquette. We might have given back his property to a President who betrayed some knowledge of good usage, but to a blundering boor like Marroquin —never! Foreigners must be made to understand that this polite nation will make no restitution to violators of good form. A charitable plea might, however, be made for the irregularity of Colombia's appeal to our Senate direct. President Marroquin had probably been reading Senator Lodge's article on the Senate. He there learned that all the wisdom and goodness of the United States were massed in the Senate; that Senators really ran this Government; that they made the President do their will in every respect, and, particularly, allowed him to have nothing to do with treaties. What wonder, then, that the untutored Colombian Executive went straight to headquarters?

To show how scrupulously correct was our own conduct throughout, we need to read only the telegrams laid before Congress. Why, we did not recognize the revolution a minute before it occurred! In our supreme desire to follow the right course in stealing a canal, we telegraphed our consul at Panama on November 3 to find out if there was a revolution for us to recognize. He promptly replied that there was none yet, but hoped there would be in the course of the night. So, with great forbearance, our Government waited—with some impatience, it is true, but still it waited. Then note also how absolutely proper we were in paying no attention to Colombia's protest against our shearing off her best province. That protest did not arrive in Washington, Secretary Hay carefully observes, until two hours and fifteen minutes after we had recognized the independence of Panama. Of course, it was then too late to do anything. Justice might have required us to act, but think of the bad form! Seriously, the official dispatches sent in to Congress, meagre as they are, and far from telling the whole story as they are, make it certain that our Government knew all about the Panama revolution in advance, and had arranged to give aid and comfort to the insurrectionists. How else can we interpret the orders sent to Admiral Glass on November 2, *two days before the revolution*, "Prevent landing of any armed force, either Government or insurgent, with hostile intent, at *any point within fifty miles of Panama*"? There could not be a plainer guarantee to the rebels of immunity from attack by Colombian troops.

Dr. Albert Shaw, the editor of the *Review of Reviews*, is one of the closest personal friends of Theodore Roosevelt, and a frequent visitor both at the White House and at Oyster Bay. Hence peculiar interest attaches to his utterances in the current number of the *Review*, upon the Panama situation. The article was obviously written long before the recent developments in the Isthmus. Its comments are very striking for their accurate forecast of what was likely to happen at Panama. The shadows of the coming events are here cast before so clearly as to entitle Dr. Shaw to front rank among astrologists—provided, always, that the future had not already been revealed to him either at Washington or elsewhere. Thus, in most positive language, Dr. Shaw stated that, in the event of an uprising at Panama, "our Government will no longer follow the plan of holding the situation for the benefit of the Colombian Government." It was also quite plain to Dr. Shaw that if Panama, in revolt, should "appeal to the United States for friendship and protection," she would "not be treated with disdain." Dr. Shaw further averred that Secretary Hay would not pay less to the new republic than to Colombia for a canal, and that he would not permit such a new republic "to assert over our canal strip any absurd pretensions of sovereignty." Along the canal itself "the United States Government would be at liberty in its own way to administer justice, protect the public health, and do *whatever it might find necessary* in its capacity as a Government."

Senator Hoar intimates that the *Evening Post* should be ashamed of itself for attacking the Government "in foreign affairs." It ought to wait, the Senator insists, until it had the "facts" and "information" before it, to show what was the real "purpose of the Administration." But, really, it is only following the example of Senator Hoar himself. On December 6, 1893, he rose in the Senate to ask for information about Hawaii. That was an admission that he had not the "facts" before him, but did it deter him from attacking the Government? Not at all. He went on roundly to assert that the President was about to "commit an act of war against a friendly Power." So horrible a thing did that seem to him that he called for "a swift and indignant remonstrance of the American people," of a kind to make itself "heard by Executive ears, however dull they may seem to be." Surely, in that there is warrant enough for the *Evening Post*, from the very master of precedents and the flower of courtesy. The fact that President Cleveland was proposing to do an act of simple justice could not have so angered Senator Hoar as to make him forget the proprieties. At any rate, it does not lie in *his* mouth to rebuke those who speak out when the President is guilty, in the Senator's own words, of "an act of war against a friendly Power."

M. Bunau-Varilla had already, in his letter to Senator Morgan, shown himself such a charming example of the diplomat of the new school that his venture into newspaper correspondence is

like painting the lily. His cable dispatch to the Paris *Matin* is, so far as reported back to America, one of those inimitable combinations of sentiment and stock-jobbing which makes us regret the loss of a single word. He feels that the French recognition of Panama is proof that France appreciates the "elevated and noble scruples which have always governed America" in regard to French interests. Generous Americans, he says, gladly recall the services of France in the war of Independence, and also her magnanimity in offering us "for a nominal price the empire of Louisiana." This fresh view of the cordiality and liberality of France and of the delicate consideration of the United States is ample proof of M. Bunau-Varilla's skill in his new field of activity. But his burst of compliment rises to a climax when he assures the readers of the *Matin* that if "only a part of the capital invested" in the Panama Canal is saved, there would be "compensation for the balance in the closer friendship between the United States and France." Here we have a toast that beats the old one hollow. It is: 'Money is thicker than water."

The usual fatuous citation of foreign approval, when the United States undertakes a course questionable in morals and perilous in policy, is now made in connection with the movement to annex Panama. France likes it, Germany has no quarrel with it, England gives silent consent—therefore it must be wise and good. We know how swiftly that argument is reversed on occasion. The fact that other nations desire us not to do a given thing has been many times a powerful reason for doing it. But in the present case the motive is unconcealed. Europe has long wanted the United States to take direct charge of the unruly peoples of Central and South America. We have warned foreigners to keep their hands off, yet have refused to keep the turbulent and revolution-ridden republics in order. The result has been no end of vexation for European nations. Their debts have been refused payment; their trade embarrassed. If we would only hold ourselves responsible for the foreign obligations of the South Americans, and make smooth the way of European trade with them, our commercial rivals would be delighted. No wonder, then, that they hail every step which promises to embarrass us and aid them. As for the break-up of Columbia and her consequent inability to pay the interest on her foreign loans, it is obvious that we are, in that regard, laying ourselves open to troublesome reclamations.

If the Republican party were not possessed of a mind conscious of its own rectitude, Monday would have been a trying day for it in the House. The beginning of the debate on the Cuban Reciprocity bill was marked by an attempt on the part of the Democrats to make a virtuous action wear an unattractive appearance. The latter played their cards very well, and the honors of the first day's discussion rest easily with them. The determination of the Republicans to railroad the bill through the House by shutting off all amendments gave their opponents a chance to impugn their motives. Although the bill was defended by the Republicans on the ground that "the national honor required it," the new Democratic leader was quick to intimate that possibly the national honor had got mixed up with the necessities of the Sugar Trust. The refusal of the Republicans to entertain an amendment abolishing the differential on the refined, brought into play against the party that most deadly of all weapons, humor. The change of heart of those sixty-one Republicans who in the last Congress joined with the "solid Democratic phalanx in defiance of the Sugar Trust," was most effectively used. While questioning the sincerity of the Republicans, the Opposition hastened to support the pending bill because, as Representative Williams said, they recognize in it "a thoroughly Democratic proposition." The Republicans were thus represented as parading in borrowed clothes.

According to the *Tribune's* Washington dispatches, familiar but very weak arguments are to be advanced in favor of Gen. Leonard Wood's confirmation as major-general. Thus, we are told that the President had to promote him because he was the senior brigadier-general, and also because not to have done so would have been a discourtesy to the memory of President McKinley, who originally appointed Wood a brigadier-general. Now, if appointments to major-generalcies are to be made not for merit, but out of respect to dead statesmen, this is a valid argument. The common belief at the time was, that President McKinley gave Gen. Wood the brigadier-generalcy in order to keep him from accepting the presidency of the District of Columbia street railways at a salary of $25,000. As far as the argument of seniority is concerned, it is ridiculous enough when one considers that Gen. Wood had just been jumped over 456 other officers, all senior to him. Moreover, it was not Gen. Wood's only chance to become a major-general, since vacancies in that grade will occur in 1904, 1906, 1907, and also in 1909, by which time Gen. Wood will undoubtedly be better fitted for the rank than today. Most important of all, promotions from brigadier to major-general have not been governed by seniority under either Mr. McKinley or Mr. Roosevelt. The latter, for instance, in July, 1902, jumped Brigadier-Generals George W. Davis and John C. Bates over the head of the senior brigadier, James F. Wade, who had been five years in that rank. President McKinley had previously passed over Gen. Wade's head to the rank of major-general Colonels S. B. M. Young, A. R. Chaffee, Arthur MacArthur, Robert P. Hughes, and Loyd Wheaton. It was considered perfectly proper for Gen. Wade to take rank under these officers and to wait until this year for his double stars. If the Senate committee really wishes to ascertain professional opinion about Wood, it should cite army officers before it and promise them immunity for any statements they may make.

The ten per cent. cut in wages at Fall River is symptomatic. The abnormally high price of cotton does not really differentiate the textile situation from that of industry in general. The excessive amounts paid by the Steel Trust for its ore lands, its coke ovens, and other properties contributing to its finished product have put it in a similar dilemma. And it was only last week that the president of the American Cotton Oil Company explained a heavy drop in the earnings for the last year on the ground of the extremely high price of cottonseed. The railroads have also been exemplifying this tendency, the increase in their gross earnings being in a number of cases more than offset by the higher cost of all their supplies. The cut at Fall River is no surprise to any one acquainted with the industry, for it has been a well understood fact for months past that there could be little profit in manufacturing without an advance in the price of finished products.

Granting that the excessive quotations on cotton are due as much to natural conditions as to manipulation, there is still the question of the purchasing power of the community to be considered. A favorite argument with both cotton and wool manufacturers in recent years has been that the public would be forced to buy at any price. This has been shown to be a fallacy this year in the wool manufacturing industry; and evidently fears are entertained that the doctrine will prove equally ineffective in cotton. The slump in the Chinese demand, occasioned by the high quotations made by our manufacturers, has greatly enlarged the offerings in the home market, where increased economy on the part of final consumers has already begun to be witnessed. Hence it is the inevitable which has occurred. The cost of production must be reduced, and wages, as is usually the case, must suffer first. There can be little doubt that the movement will not be confined to Fall River, but will extend to the other southern New England manufacturing centres, and eventually to the northern New England textile communities—that

is, to the fine-goods mills. The question, of course, is, How will the operatives take the new situation? The presumption is that they will recognize its inevitable character and refrain from strikes.

The latest phase of the Montana copper-mining situation is most menacing. When a judge handed down a decision adverse to the Amalgamated Copper Company, that concern immediately announced the closing down of all its mines, smelters, and other plants in the State, throwing upwards of 12,000 men out of employment. We asked at the time if this action was for the purpose of coercing the higher court. It looks now as if the end in view was the coercion of the Governor and the Legislature, and eventually of the judiciary. The labor situation thus created threatened to demoralize the State. The burden of solving the problem was thrown upon the Governor, who received assurances from the Amalgamated people that if he would call an extra session of the Legislature to discuss the desirability of preventing judges with a bias from trying cases which might come before them, work at the mines and smelters would be resumed at once. The Governor has assented to this and issued the call. The position in which he finds himself, even as the executive of so notorious a pocket borough as Montana, is extraordinary. He says that, bad as is the present condition of the State, he believes it should continue indefinitely rather than that such a precedent as this should be established. The fact is, he has found himself confronted with what the Roman poet calls the severe necessity of nature, and has been unable to stand up under the shower of petitions which have come to him from taxpayers, labor organizations, and others.

The "open shop" is a dangerous subject, as the American Federation of Labor discovered on Thursday. The members saved themselves from disaster by recommitting some wild resolutions which, apropos of President Roosevelt's decision in the Miller case, declared that "this open-shop policy is but a subterfuge and a means of strengthening the non-union and scab-shop position of the union-hating capitalist corporations"; and that "this applies to the open shop under private management as well as to the open shop under Government or public management." The President can only be strengthened, not weakened, by such denunciation. He has take his stand squarely on the impregnable law which can recognize in public service no distinctions of color, creed, or social class. Should the Federation be rash enough to set up its dictum as superior to the fundamental principles of this republic, it would be exactly in the position of a bull fighting an express train.

One of the absurd pretensions of labor unions has been rebuked by a Canadian court. The city of Toronto called for bids for firemen's clothing; and the lowest competitor was the Crown Tailoring Company. The contract, however, was awarded at a higher price to a concern using the union label. Thereupon the Crown Tailoring Company obtained an injunction. In rendering a judgment, Chancellor Boyd declared that in issuing its specifications the city could not demand the use of any particular union label, and thus discriminate against certain classes of laborers who might be as capable as those entitled to use the label. The true test of ability, he held, is not membership in a union. This decision simply applies to public contract work the same principle that President Roosevelt laid down in the Miller case in the Government Printing-Office. A private individual may have on his clothing any label he chooses, and he may pay any price he can afford; his whims and tastes are matters with him to settle with his conscience and his pocketbook. But the Government, whether Federal, State, or municipal, is bound to treat its citizens without fear or favor. The man who will do the work properly, and at the lowest price, with or without union labor, is entitled to the contract. Else the public is robbed to fatten an industrial monopoly.

Premier Combes has announced to the French Senate the Government's intention of pushing the war against the teaching orders. The famous Associations Act of 1901 has already driven many of the religious orders out of primary instruction; now the Ministerial programme contemplates the permanent suppression of all secondary and superior schools managed by them. Authorized monks or nuns will be permitted to keep primary schools only. That would involve the closing of many historic colleges, and presumably the sequestration of their properties to the State. M. Combes further declared that the rights of the regular clergy in school matters would be separately considered as a part of the general readjustment of the relations of Church and State. That is a pretty clear intimation that the Government will seriously weigh the abrogation of the Concordat. Having deprived the orders of the liberties usual in all republican countries except France, and having withheld the stipends given by treaty to the regular clergy, the anti-clerical campaign would be complete. It will not be achieved without opposition, for there is an alternate project, with respectable backing, which provides simply for more stringent supervision of secondary and higher education.

"I have come to the melancholy conclusion that at present the country does not want a fleet nor an army nor public instruction"—thus Señor Silvela, the retiring Conservative chief, in his farewell address to the Spanish Cortes. Chamberlain may devote all the strength of his sixty-eight years to a demand for tariffs; Von Bülow may give his days and nights to the Agrarians and to the canal advocates. But not Silvela! It is not for this grandee to stoop to things of a fiscal nature. "The country," he declared, "is interested only in material reforms, in agriculture, in industry, trade, and public works. It is perhaps right. But I, for my part, in order to remain in office, required that the country should want an army, a fleet, and such a foreign policy as it ought to desire." Lest any one should be in doubt as to that policy, Señor Silvela added: "I mean a foreign policy frankly accepted without fear of the risk. To be on equally good terms with every one is not a policy." No wonder that the Madrid correspondent of the London *Times* spoke of the dramatic interest of this scene. To think that a nation could fall so low as really to want to recoup itself after long years of war and oversea losses! On good terms with the world? Free from the burdens of army and navy? Devoted to the arts of peace? Engaged in industry? How sordid, how material, how small! No wonder Señor Silvela, broken-hearted, quits politics.

The acceptance of the Austro-Russian demands by Turkey and the reappearance of Boris Sarafoff, the Macedonian leader, who had been reported dead, indicate the renewal of the Balkan rising in the spring. For the Turks will do nothing, and Sarafoff is one of the three great revolutionary chieftains. At the moment of formal acceptance, the Porte is making every effort to render the reforms of no effect. That will be done in a way long traditional at Constantinople. The most distasteful feature of the reforms is the provision for Christian "assessors" (inspectors) and officers of the gendarmery. But there is a class of subsidized Christians kept for precisely such exigencies. So long as the Sultan may have their nomination, he need not fear excessive zeal from that quarter. No scheme of reform, the working of which depends on the Sultan, is worth the paper it is written on. Austria and Russia, or, better, the European Concert, must set up an autonomous administration in Macedonia or face the prospect of the insurrection renewing itself with increased bitterness in the spring. The immediate need of the 25,000 refugees is food and clothing. With rifles enough, says that practised observer, Mr. A. G. Hales, of the London *Daily News*, the Macedonians could win their own independence. Hence the need of intervention during the armistice.

HASTE AND REPENTANCE.

Was it Roosevelt the historian, or Roosevelt the embarrassed party leader, who said, on receiving Panama's Minister, that his lightning recognition of Panama was but doing now "as we did nearly a century ago, when the Latin peoples of America proclaimed the right to popular government"? As he must be perfectly aware, what we "did" in 1822 was to recognize republics which had declared their independence from six to ten years before that date. In message after message, President Monroe referred to the revolutions in South America, but steadily refused to allow his hand to be forced, until the Spanish colonies had shown that they were able not merely to assert but to maintain their independence. In his special message of March 8, 1822, announcing recognition, Monroe gave a review of the long struggle, saying that "*the great length of time*" during which it had extended and the "utter inability" of Spain to reduce her revolted provinces, compelled him to conclude that the new nations ought to be recognized. Compare this deliberation with President Roosevelt's recognition of a seceding State before its own Government even knew that it was in revolution! Of course, President Monroe was a fearfully slow coach, who would have made a sad fist of it in these strenuous times; but if he waited six years, it does seem as if Mr. Roosevelt might have waited six days.

Clearly, it was not the Monroe Doctrine of recognition which Secretary Hay had in mind when he said that "the Monroe Doctrine and the Golden Rule" were the sufficient bases of our foreign policy. Colombians, who are sadly ignorant of the Scriptures, will be tempted to think that what he really said was, "the good old rule"—that they should take who have the power. We know that the king's business requireth haste, and so, apparently, does a certain sort of President's. The first intimations we had from the State Department breathed of all deliberation. A guarded recognition of the de-facto government at Panama would probably be found necessary, so one of Mr. Hay's assistants informed the reporters, but nothing would be done precipitately. That was before the Cabinet meeting of the 6th. Immediately upon its close, the startling news came that the President not only had recognized the de-facto insurrectionist government, but had entered into relations with it, and had notified Colombia that she must not attempt to restore her revolted territory. This was the indecent haste which filled all conservative men with amaze; and the President's maladroit reference to the example of Monroe only serves to make his own course appear the more unprecedented and indefensible.

Are we now bound to go to war with England—and also Cuba—for declining to recognize the independence of Panama? No one can tell, in these wild and whirling times. The British Foreign Office, it is true, alleges that it is simply following "international precedent" in waiting to see if Panama is really able to maintain her independence; but this is either an insult or a stupidity. Does not Lord Lansdowne know that we have abolished all precedents, including our own? These doddering diplomats of the old school are really "not in the game." The hustling youth who are now playing football with international law are rapidly making Monroe and Seward and Lincoln a perfect laughing-stock. When British ships chartered by Colombia appeared on the horizon, the Cabinet told the President that it would never do to prepare another piece of *Trent* humble pie for himself to eat; and so the orders to stop British ships on the high seas were graciously rescinded. With lawyer-like patience, Secretary Root is said to have explained to the Executive, who had been reading his duty in his wishes, that, really, there were certain laws that it would be just as well to respect; that what had been ordered done in Colombian waters was an act of war. "Why, is it?" was the surprised question of that just man armed; "then, of course, I'll take the back track." But the real magnanimity of the Administration did not appear until it was a question of imminent collision with Great Britain. Any old law was good enough for the Colombians; but when the Union Jack hove in sight, the President suddenly awoke to the need of looking into the books to discover what the rule was.

Another retreat by a rashly vigorous Administration is announced in the matter of the new canal treaty. The first ingenious plan, it will be remembered, was to take the act of Congress and write into it the word "Panama" wherever the word "Colombia" stood. But it is now regretfully admitted that the question whether this can be done is "one for a lawyer to decide." Well, the lawyers have already decided it adversely, and the pretty scheme is abandoned. The thing will have to be done all over again. A new and perhaps tainted treaty will have to be submitted to the Senate. This will have to be done on the eve of a Presidential election, and the strenuous short-cut to a canal which would have come to us all in good time, if we had been patient and decent, is likely to delay the project still further. The earliest and most consistent advocates of the Panama route—at a time when Secretary Hay was scouting it as beneath the notice of a serious Government—are free to oppose to the best of their ability any treaty that bears on its face the marks of collusion and bad faith, undeterred by the virtuous attitude of the Administration in rejecting the proposal to go back and complete an arrangement with Colombia, on the ground that it would look as if we were actuated by mercenary motives. (Besides, we can get the canal so much cheaper from Panama!) The Democratic Senators are of course preparing to oppose the hasty-pudding treaty with the overnight "republic" of Panama. They will do so on various grounds, some sincere, some partisan; but it is obvious that, if they are determined, they can prevent ratification. The Republicans are three votes short of a two-thirds majority in the Senate. The great project now bids fair to be made a matter of fierce party contests; to be thrown into the next Presidential campaign; and so to be imperilled anew. So much for digging a canal before it was caught.

It is easy, of course, to hold up hands of horror at the nefarious course of the Democrats. Republicans ask in pained amazement if it is possible that an Opposition party can place itself before the country in so "ridiculous a light." Yes, dear friends, it is all too possible. The Republicans, when in Opposition, showed just how possible. They remorselessly killed the Bayard-Chamberlain treaty during President Cleveland's first Administration, and their motives were of precisely the partisan character which they now attribute to the Democrats. To score a point against the President of the opposite party; to embarrass the Administration; to keep unsettled questions still in a condition to vex statesmen and inflame the country—that has been the way of political parties ever since they were born. We are not defending it. We simply say that it is inevitable (political human nature being what it is) with a Presidential election imminent, and that it should have been foreseen. Above all should it have been foreseen by a President who prides himself on never pursuing barren ideals, but resolutely grasping the attainable.

THE CANCELLED MESSAGE.

"We must forthwith take the matter into our own hands!" Those astounding words from the message that he would have sent to Congress but for the Panama revolution, President Roosevelt now makes public as a supposed justification. They are, rather, his deepened condemnation. They will revive the acute fears that many had when President McKinley was assassinated, lest a firebrand type of man succeed him. Mr. Roosevelt apparently strove to dissipate that alarm of sober citizens. They began to think that responsibility had steadied him, but now we find him taking a position which has in it the possibility of a thousand international quarrels and a constant threat of war. In an affair exclusively within the sovereign control of a friendly nation, he is ready to declare that "we can no long-

er submit to trifling" and "must forthwith take the matter into our own hands"—the matter being, it will be observed, the property of another country. Under such a robber contention, we should be entitled to seize any land on earth which we happened to want, and which we thought ourselves possessed of sufficient brute force to take. It is a declaration of stark and lawless absolutism, tempered only by land-hunger, which we have lived to see made by an American President.

That Mr. Roosevelt's hasty falling into the arms of the Jonah's-gourd Republic of Panama was a diplomatic blunder of the first magnitude, is a proposition by itself. Several of our first authorities on international law have assented to it; but it may be admitted that the public in general does not take a keen interest in such nice questions. What everybody can see, however, is that the overbearing and brutal tone of President Roosevelt's message, as he had it blocked out, is a most serious matter. That portends trouble. It could not come from an Executive who was as scrupulous about right as he was about might. To say to a friendly but weak nation that its protests in regard to its own property were "trifling," and that we should "forthwith take the matter into our own hands," is openly to advocate a policy of aggression. The man in the street can see that. Here is no matter for experts. The wayfaring man knows bullying when he sees it, and, unless he is a fool, also knows that, as a national policy, it means the launching of a thousand ships. Hence it would seem that Mr. Roosevelt, in order to prove that he was not secretly fomenting revolution on the Isthmus, is willing to appear as a permanent disturber of the national peace. He may be sure that no utterance of his, since his accession to the Presidency, has given such a shock to conservative men, in his party and in the country generally, as this bellicose fragment of his message. We knew that he was blundering; we did not know that he would publicly indulge in threats and braggadocio.

Why should the President take it as such a mortal offence that the Colombian Senate declined to ratify the canal treaty as it stood? He speaks of this lawful action as "insincere dealing." How does he know that it was not sincere? How does the *Outlook*, which is so pained at any one's accepting rumor regarding American public men, know that it was "the robber politicians of Colombia" who defeated the treaty? It says they did, and repeats the phrase "robber politicians" with an air of conviction which ought to be based on some knowledge. Has it any? As for the President, he should be the last man to say that opposition to a canal treaty may not spring from the highest and most patriotic motives. He himself did all in his power to kill the first Hay-Pauncefote treaty, so vitally related to the Isthmian canal. That treaty had been agreed to, even ardently sought, by the Administration at Washington. It was approved by the best newspapers and the leaders of thought throughout the country. Yet at that juncture, Mr. Roosevelt, then Governor of New York, burst out in a public interview with the hope that the treaty would be defeated. Was that "insincere dealing"? Did the *Outlook* call that the act of a "robber politician"? The treaty was defeated, but that led to none of the present howling. Mr. Hay went quietly to work to negotiate a new treaty, covering all the points of the old one in a way deftly to muzzle Mr. Roosevelt and the other Jingoes, and in due time it was ratified.

Nothing is commoner than to have treaties temporarily defeated. Our Senate has been a very graveyard of treaties. It ought to make the most solemn Senator smile to be informed by the President that the rejection of a treaty is a ground of international offence. If it were, we should have been at war by this time with half the nations of the earth. What diplomats, up till now, have done in such circumstances is to leave off making wry faces as soon as possible, and set about getting another treaty in the place of the one not satisfactory. There is no reason to think this might not have been done with Colombia. But no, says the President, "the time has come to declare that the beginning of the canal cannot be much longer delayed." Gladstone used to be called "an old man in a hurry," but why should the young man in the White House have been in such a consuming hurry? Could not a project which has been on our hands for sixty years wait till after his renomination? In his haste he has simply passed from one blunder to another, diplomatic and political, until now he stands face to face with the practical certainty of having, with all his hurry, only delayed matters.

THE TARIFF IN 1904.

The new Democratic leader of the House displays signs of generalship which must occasion great uneasiness among Republicans. To line his party up in favor of Cuban reciprocity was an act of constructive statesmanship. This is only the first step in a broad campaign for a revision of the tariff. Hence, while the Administration will be glad to receive Democratic support on this particular measure, it must accept it with the knowledge that it is possibly paving the way for a good deal of trouble later. Representative Williams's announcement that "we shall fight for a revision of the tariff," gains force from the fact that Republican leaders have lately been talking about the possibility of injecting more protection into the schedules after next November. The existing tariff obviously furnishes the Republican party no issue for 1904. The party is in the position of a banker whose credit is questioned, and who sees the need of paying out cash regardless of everything but the pinch of the moment. Mr. Williams, harping on the growing disappointment of the country over the Dingley law, says we must reduce our schedules. But the Republican party can never consent to that doctrine. Its contention will be that the tariff must be lifted higher.

Possibly Mr. Chamberlain's retaliatory scheme may furnish the "stand-patters" in this country the opportunity they need. If he will only keep up his discussion until next November, they may find an issue in him. It looks as if the "prosperity" cry would be out of the question in 1904. On the score of industrial conditions the country may not take alarm at all over the prospect of a Democratic administration. When one stops and reflects, it is really quite dreadful to think what will be the position of the Republican party in case the strenuous life should, after all, not turn out a winning issue. The tariff might then prove the last ditch. Just at present the tariff is somewhat under a cloud. More than two years ago President McKinley injected the poison of reciprocity rather liberally into the popular mind. Then, too, certain heartless political economists and newspaper editors have insisted on holding the tariff responsible for the industrial Trusts, with their efforts to advance artificially the price of commodities and their waterlogged capitalizations. Considering that a great many hundreds of millions of dollars have been lost in the stock market, and that wages are now being cut and mills shut up, under the latest Republican tariff, that does not seem on its face a very encouraging issue.

But it is right at this point that Mr. Chamberlain may prove a godsend to the "friends of protection." The tariff is capable of becoming a magnificent issue if rightly handled. A man must be blind who does not see why capital is now in mourning and labor in tears. What we needed was a great deal more tariff than we have had. But there is nothing harder than to make people see the obvious. Though we require a much higher tariff than the present, it would be risky to tell the voters that next year in plain terms. They might not see the point, and their base suspicions might lead them to raise the cry of plunder. But if we can announce in thundering tones that Mr. Chamberlain is preparing to ruin this country by his policy of "retaliation," they may be startled into a realization that the higher your tariff the higher your prosperity. The Republican managers have chosen the right way to work the thing. They have outlined a scheme which will effectually kill Mr.

Chamberlain's preferential goose. It is said that while they propose to be "loyal to protection," they are not unwilling to do something for the revisionists, and that a strong effort will therefore be made to bring into the Republican platform next year a recommendation of a law providing maximum and minimum tariff schedules. If power is given to the President "to proclaim an exchange of favors with nations which are ready for such negotiation," he will possess a card which will trump anything in Mr. Chamberlain's hand.

Mr. Chamberlain will have to rise at a very early hour if he expects to get the better of our "friends of protection." He is only a tyro at the business, whereas they are past masters. He cannot learn too quickly that his policy would do Great Britain not a particle of good as against this country, but that it would play into the hands of our tariff gamblers. He wants Parliament to give him the right to impose retaliatory duties, and then we shall see if the United States does not come down from its high horse right away. But if the "friends of protection" have their way next year, we shall simply mount a higher one. There is no knowing how high we might run up our schedules in case of a tariff squabble with Great Britain or any other country. Possibly we could do as much in that line as we did two or three years ago with stock-market quotations. Could anything please our "stand-patters" better than Mr. Chamberlain's threat to clap on duties to keep our products out of Great Britain? The loss to American industry from a curtailment of exports to that market would be only incidental. The thing to consider is the magnificent opportunity to raise our own tariff duties. To be sure, the benefit from this would accrue to only a handful of people; but that is a mere matter of detail. Let Mr. Chamberlain play his present cards, and we shall show him very quickly that we can trump his ace. The fact that his policy is not likely to be put into effect for several years, if ever, is of course no drawback to its use as a bugbear by our "stand-patters."

COLORED STATISTICS.

The *Manufacturers' Record* of Baltimore again illustrates how impossible it seems to be for many Southern writers to discuss in good temper any question in which the relation of the negro to the rest of the community is in any wise involved. We had occasion, some short while since, to point out how magnificently endowed by nature the six heavy negro States of the South were. We said that, up to this time, those States had not attained in material things anything like the degree of prosperity of the country as a whole. We found the explanation in the fact that their population was made up not of one race, but of two, in approximately equal numbers. We did not discuss the question whether the negro was or was not in any sense the equal of the white man. We suggested, however, that, among negroes as among other races, progress upward was possible. We did not consider whether that progress ever would or could raise the negro to the level of the white man, but we did ask whether it was not of supreme importance to the South that the conditions surrounding the negro should be made such as to encourage him to progress to the utmost of his inherent possibilities; and we asked whether the South, with so many millions of black men living in it, could afford to say to them, "Strive as you choose, succeed as you can; but, whatever you do, so long as there is a discernible drop of African blood in your veins you shall never be allowed to obtain many of those things which men of all races and of all ages have most keenly longed for." In criticising our article, the *Record* uses such phrases as "fools, fanatics, or fiends," "idiocy or malignancy," etc. We carry on no discussion with any one who sees fit so to express himself, because no possible good can result from it.

One thing is said by the *Manufacturers' Record* in the article in question, and one thing only, on which it is worth while to comment: "In 1860, these six States [South Carolina, Georgia, Florida, Alabama, Mississippi, and Louisiana], containing only 9 6-10 per cent. of the land area of the country and 13 8-10 per cent. of the population, possessed 18 3-10 per cent. of the wealth of the country." The proportion they contained of the land area of the country in 1860 was for practical purposes immaterial. More than one-half of the land area of the country was then virtually unpeopled. If it be true, however, that those States, with less than 14 per cent. of the population, had more than 18 per cent. of the wealth of the country, it is very important, because it shows that almost everybody for the last half-century has been wrong. Every historian who has dealt with the civil war has assumed that the preponderance of the North, great in numbers, was even greater in wealth. If President Davis and his various Secretaries of the Treasury were now alive, would not they rub their eyes on being told by a Southern writer that, man for man, counting negroes as well as whites, the South was in 1860 nearly 40 per cent. richer than the rest of the country? Would they not have some reason to feel that an attack was being made upon their management of the finances of the Southern Confederacy? For there can be no question that, if the South was so much richer than the North, there was no excuse whatever for the condition into which its treasury and its currency came long before the war was ended. How a section with few railroads, with practically no manufactures, with one-half of its population chattel slaves owning nothing, and a very considerable proportion in numbers of the whites then very poor, could really, in some mysterious way, man for man, head for head, have been richer than the rest of the country, we must leave for the economists of the *Manufacturers' Record* to explain.

Now, of course, everybody knows, and in his cool moments the editor of the *Manufacturers' Record* as well as anybody else, that in 1860 the North was very much richer, relatively to population, than the South. He has fallen into the same snare which has enmeshed many an amateur statistician before him. He saw certain figures in the census table, and straightway sought to make comparison of them without stopping to ask whether the way in which the table had been compiled made such comparison possible or not. According to the census of 1860, the true wealth of those six States named was, as the writer in the *Manufacturers' Record* says, 18 3-10 per cent. of the wealth of the country, although those States had only 13 8-10 per cent. of the population. But how was the wealth of these States calculated? Slaves were property. One-half their population was owned by some part of the other half, and a value of some hundreds of dollars a head was put upon this enslaved half of the population; and in that way, and in that way alone, did it come about that the wealth of the South in 1860 appeared from the census figures to be relatively greater than that of the North. A skilled artisan in Ohio was of vastly more value to the community in which he lived as a wealth producer than was a field hand on a plantation in the Alabama Black Belt, but the field hand figures in the return of the wealth of Alabama in 1860 as worth somewhere from $1,000 to $1,500, while the Ohio mechanic was, fortunately for him, not appraised as anybody's property.

If the deputy marshals who took the census of 1860 assumed each slave to be worth on an average $500, slave property would have added about $250 to the apparent per-capita wealth of the entire population of the six States under consideration. According to the census of 1860, the total property in the country, real and personal, including slaves, averaged only $514 per head of the population.

It is not possible to say with precision for how much slaves in these six States figure in the total valuation of the census of 1860. Some facts of great significance in this direction are, however, accessible. Manufactures of any considerable importance being almost unknown in these States (cities and large towns being very few), their wealth must have been largely agricultural; that is to say, their land constituted a larger

proportion of their total property than was the case in other sections of the country where the diversification of industries promoted and required the accumulation of personal property; yet the census returns point to the directly opposite conclusion. Outside of these six States, the assessed value of real property was nearly twice as great as that of personal property. In these six States the assessed value of personal property was almost twice as great as that of real. Slaves were, of course, considered personalty. In South Carolina and Mississippi, where the slaves were most numerous, the assessed valuation of personalty was about two and a half times as great as that of realty. According to the census figures, the true per-capita valuation of all property in 1860 was, in Mississippi $767 and in South Carolina $779, while in New York it was $475 and in Pennsylvania $487. No one could give a moment's intelligent consideration to such figures and not perceive their utter worthlessness for all comparative purposes. Indeed, outside of the vitiating element of the slave valuations, the table is useless for any purpose of comparison. It is scarcely possible that in 1860 the average inhabitant of Connecticut was nearly 46 per cent. better off than was the resident of Massachusetts; and yet the census of 1860 so states.

THE RIGHT TO NEW TRIALS.

Prof. J. H. Wigmore has an article in the November number of the *Columbia Law Review* in which he discusses the question of granting new trials because of the erroneous admission or exclusion of evidence. He pronounces the existing practice of our courts absurd and dangerous, and insists that it ought to be altered.

The present theory of the courts is that a party is entitled, as of right, to a new trial, whenever it appears by proper exceptions that evidence has been improperly admitted or excluded, the admission or exclusion of which may, *by possibility*, have affected the result as against him. If it is, humanly speaking, impossible to conceive that it did so affect the result, the admission or exclusion is treated as "harmless error," and a new trial is refused. But the limits of harmless error are very narrow. In nine cases out of ten error by the trial judge will vitiate the trial even though the record shows that, with the error disregarded, the result reached by the jury *ought to have been the same*. Mr. Wigmore gives some striking instances. In a case in Alabama, there being a dozen exceptions to rulings on evidence, one of these was found wrong and a new trial was granted, though no substantial prejudice through the rulings was asserted. In a case in California a new trial was granted for error in allowing the prosecution to contradict the defendant on a matter having "no reference whatever to the guilt or innocence of the defendant"; in a case in Nebraska for allowing the contradiction of a witness on an immaterial point; in a case in North Carolina where the whole evidence "warranted conviction"; in Vermont, because counsel in his address said that he knew his clients to be of good reputation, and that this was the best kind of evidence for them. In a late case in the United States Supreme Court, a new trial was granted in a homicide case because, after a "dying declaration" had been properly received in evidence, the error had been committed of admitting a subsequent statement by the deceased that her first declaration was true "in every particular."

The practice is productive of an enormous mulitplication of trials and constant miscarriage of justice. It has produced a notorious abuse in unscrupulous trials of cases "for exceptions"—counsel being employed not to get a verdict, but to trap his opponent into a slip on evidence which will enable him to upset the verdict, however just. In criminal trials it has been carried to such length as to sap public confidence in the administration of justice; in many parts of the country the constant rescue of convicted murderers by appellate courts for trivial error is thought to be ample justification for lynching by mobs without any trial at all.

The abuse can be defended only on one or two theories: either that the party has a legal right to a judicial observance of the rules of evidence *per se*, or that the reverse of the practice would involve a *usurpation* of the function of the jury. The first theory makes the observance of the rules of evidence, instead of a fair verdict, the end of the appeal; but this is the abuse itself, not a justification of it. The second is supported by neither reason nor analogy; the functions of the jury are at every turned exercised subject to the correction and revision of the court. It is everyday practice for an appellate court to confirm a judgment setting aside a verdict as against the weight of evidence, though, if the jury have any function at all, it is the weighing of evidence. In the ordinary case of a non-suit, or verdict for defendant directed by the judge and confirmed on appeal, the party defeated is cut off from the jury altogether, and the case is at an end. Why should the trial be vitiated for erroneous admission or exclusion of evidence if the appellate court is able to say that, even with the error corrected, the jury should rationally have been still bound to render the same verdict?

The practice is among the causes which have long been tending to enfeeble the bench and impair the confidence of the public in the administration of justice. The great democratic wave which swept through the courts and legislatures two generations ago has had effects of which those who swam with it little dreamed. To say nothing of the elective system, which, combined with short terms of office, inevitably tends to make judges timid and subservient, the temper of the time was jealous of judicial power and authority, and every effort was made to limit it. Statutes were passed, for instance, for the express purpose of diminishing the control of judges over verdicts and hedging them about on every side in their relations with juries. Their control over the proceedings in their own courts was taken away from them, and, in the name of simplicity of procedure, the most elaborate codes ever seen were constructed by the Legislature for their government. Under such influences a new ideal of judgeship gradually grew up, which makes the American judge today a figure radically different from that of which we have inherited the idea from the past. To succeed, his aim must be, not to develop the administration of justice and uphold the majesty of the law, as the great judges of the past did, but to be, as Mr. Wigmore puts it, merely an umpire of the game of legislation. This tendency was perceived by judges of the older breed fifty years ago. We find Judge Nisbet of Georgia saying in 1852:

> "It is to be feared, in these days of reform, that the judges will be so strictly laced as to lose all power of vigorous and healthful action. I have but little fear of judicial power in Georgia so aggrandizing itself as to endanger any of the powers of other departments of the government; or to endanger the life and liberty of the citizen; or to deprive the jury of their appropriate functions. The danger rather to be dreaded is making the judges men of straw, and thus stripping the courts of popular reverence, and annihilating the popular estimate of the power and sanctity of the law."

The fetish which has been made of the right to new trials is connected with this new phase of judicial development. As the judge's independence and courage are weakened, he inevitably grows fonder of rules which save him from responsibility.

The abuse seems now so imbedded in our jurisprudence that it will prove very difficult to eradicate. Some statutory efforts have been made in this direction, but thus far without much effect. Mr. Wigmore does not cite any cases to show that the right to a new trial on the score of trivial error is a constitutional right, and we know that in England, from which country we have derived all our legal theory on the subject, the abuse seems to have been swept away. Law reform in England has been directed to strengthening the courts, not weakening them, and "in England, to-day, the whole odious practice of misusing the rules of evidence as petty stratagems in litigious tactics has passed away. In the reports

of decisions there now occur annually not more than five rulings upon points of evidence, as against more than five hundred in the reports of the United States." It seems absurd to suppose that we have gone so far in this country on the wrong road that there is no help for us.

THE DEDICATION OF THE GERMANIC MUSEUM AT HARVARD.

CAMBRIDGE, November 11, 1903.

The opening of the Germanic Museum, which was dedicated yesterday, may well mark an epoch in American university education, for the Museum has come into existence as a recognition of the fact that not in books alone can the American student of a national civilization find the material he needs for an all-round view of his subject. Much that is most precious a nation or a race does express in words, and the written word remains; but much that is most characteristic it embodies through arts and crafts and customs, in stone or wood, in brick or metal, on canvas or on plaster. The mediæval epics 'Parsifal' and the 'Nibelungenlied' do not surpass the mediæval German cathedrals in either racial or epochal significance; indeed, one may fairly maintain that the higher achievements in poetry, be they epic, lyric, or dramatic, measure the genius of the individual poet rather than that of his race. A people, on the other hand, chose just such a monument of collective effort and taste as a cathedral to embody its ideals.

To bring together under one roof typical specimens of the most important non-literary expressions of the Germanic peoples is accordingly the purpose of this new Harvard museum. Through the eye, it will supplement the usual instruction by books. Eventually it will exhibit not only examples of architecture and sculpture and of the various lesser fine arts, but of tools, vessels, and weapons, together with models of all sorts of dwellings, vehicles, boats, and tombs; so that the visitor may get from it such a clear idea of the beginnings, growth, and range of the Germanic genius as a naturalist can get now of the evolution of animal types by visiting the Synoptic Room at the University Museum.

A museum of this kind is new in America, nor does Germany possess its like; for there the great Nuremberg collection is limited to German objects, whereas the Germanic Museum at Harvard will include all the Teutonic peoples and their descendants, namely, Germans—including those in Austria and in Switzerland—Danes, Dutch, Scandinavians, and Anglo-Saxons. It differs also from the Semitic Museum at Harvard, dedicated less than a year ago, in the important respect that the chief concern of the latter is with ancient peoples and a dead and gone civilization, while the Germanic collections will show the successive stages by which the dominant races of to-day—the German, the English, and the American—have come up out of the past, bringing with them their common Germanic inheritances, which, by mixture of blood, by the intangible moulding of land and climate, and by unlikeness in circumstance and fate, have been widely diversified.

The exercises yesterday were unusually interesting. Rarely can one listen to half a dozen addresses, all focussed on a given point, in which there is so little repetition; more rarely still do so many eminent speakers take part in a single celebration. Prof. H. C. G. von Jagemann, chairman of the German Department, presided, and in his opening remarks told briefly the story of the origin of the Museum. Nearly ten years ago instructors in the department began to discuss the project, which they first set before the public in an appeal printed in the *Harvard Graduates' Magazine* in March, 1897. Three years later an association, composed of prominent German-Americans and others, was founded, an active propaganda was begun, and subscriptions were solicited. The project received a cordial endorsement in Germany, where such leaders as Herman Grimm, Mommsen, Virchow, and Harnack took it up; and when the German Emperor, quick to perceive its rich possibilities, announced that he would present to the Museum casts of many of the most striking examples of architecture and sculpture, success was assured. As a handsel of his munificence, Kaiser Wilhelm sent photographs of his intended gifts, which were formally delivered by Prince Henry of Prussia, in March, 1902. The Harvard Corporation had already assigned the Old Gymnasium as a habitation, which has been so skilfully readapted that it serves admirably for the present collection.

The formal presentation of the Kaiser's benefaction was made yesterday by Baron von dem Bussche Haddenhausen, chargé d'affaires of the German embassy, in the absence of Ambassador Speck. He spoke gracefully and tastefully, and concluded by referring to the gift by German scholars of fifty-five galvano-plastik reproductions of the works of German silversmiths from the Middle Age to the eighteenth century, and to the gift by Prof. Archibald C. Coolidge of the history department at Harvard of 10,000 volumes on German history and civilization.

President Eliot responded in behalf of the Corporation, praising the unique act of the Kaiser, which had given a great impulse to the project, and pointing out how welcome to "this society of scholars" are the gift of the scholars of Germany and that of Professor Coolidge. Mr. Eliot gave a rapid history of the growth of museums at Harvard, from which one could perceive how anthropology, in the broadest sense, has claimed more and more attention.

The next speaker, Prof. Kuno Francke, to whose unceasing zeal the Germanic Museum is really due, described enthusiastically several of the purposes which such an institution must serve. He laid particular stress on its being a bond of union among the various studies relating to different phases of national life. It will, in uniting many scholarly interests, counteract the tendency to narrow specialization, since the same specimen may serve to illustrate the investigations of students in different fields. Coming to the concrete, Professor Francke showed, by an analysis of the figures from Naumburg Cathedral, and by a criticism of the equestrian statue of the Great Elector, the sort of use to which the treasures of the Museum can be put.

The Hon. Carl Schurz, President of the Germanic Museum Association, who was now introduced, emphasized the benefits which may be hoped for from this institution by the strengthening of international friendships. Sentiment alone, he said, does not determine political relations, but it counts for much; and at a critical moment even a little friendly sentiment may tip the scales in favor of peace. He denounced in noble language the efforts of "a sensational and unscrupulous press" to stir up an artificial excitement so as to make war appear inevitable between Germany and the United States. Blood is thicker than water; if that truth were kept constantly foremost, the senselessness of such a turmoil as we witnessed last year over the Venezuela affair would have been apparent from the start.

"To my mind," Mr. Schurz said, with memorable solemnity, "there is nothing more abominable, nothing more hideous, nothing more criminal, than the reckless goading of nation against nation for the purpose of disturbing their friendship and peaceful intercourse. It is a crime so infamous that it should put any one guilty of it outside of the social pale of civilized mankind. On the other hand, nothing can be more honorable and blessed than any effort to create and nourish a public spirit abhorring the resort to war, except in case of the most absolute and extreme necessity—a sentiment inspiring a statesmanship bent upon devoting in international policy the keenness of its eye to the discovery, not of the things that irritate and divide, but of the things that conciliate and unite."

Mr. Edward Robinson, Director of the Boston Museum of Fine Arts, spoke next on the cordial relations that should always exist between the two museums, whose collections should be mutually complementary; and then the exercises closed with a valedictory from Prof. William James, who had been requested, he said, to act as spokesman for the general body of teachers in the University. After the listening to much that was weighty or properly formal and didactic, his epilogue, abounding in irony and humor, was especially delightful. He began by referring to the background which a university with so many diverse interests as flourish at Harvard furnishes for each dweller in the academic circle; and went on, in half-playful vein, to specify the virtues and vices of German scholarship, in characteristic sentences, which considerations of space forbid me to quote. The effect of his address was electric. Thanks to its wit, the audience broke up still fresh after listening to nearly two hours of speaking.

The audience itself might justify a separate letter. It filled the New Lecture Hall, and comprised not only nearly all the notabilities of the University and distinguished persons from Greater Boston, but also representatives of other colleges and guests from many parts of the country. They had ample opportunity to inspect the Germanic Museum, which is already so well stocked that it is worth a day's journey to see; and in the evening at Sanders Theatre they attended the performance by Herr Heinrich Conried's New York company of three German plays—Hans Sachs's "Der Fahrende Schuler im Paradies," Goethe's "Die Geschwister," and Fulda's "Unter Vier Augen."

The celebration and the Museum itself are a tribute to the persuasive enthusiasm of Prof. Kuno Francke, who has labored for the project both here and in Germany and in Switzerland, and has had the good fortune to see it so soon realized. As President Eliot remarked, the establishment of this Germanic Museum will doubtless lead

to the founding at Harvard of similar institutions for the study of Italic and Gallic civilizations. WILLIAM R. THAYER.

Correspondence.

THE GREATEST COUNTRY ON EARTH.

TO THE EDITOR OF THE NATION:

SIR: Thoughtful citizens East, West, North, and South must acknowledge with bowed heads the truth of your statement in last week's issue, relative to the Panama affair, that "President Roosevelt and Secretary Hay have thrown American principles to the winds, and have committed the country to a policy which is ignoble beyond words." This out-Philippines the Philippine iniquity. One is compelled to fear with Hosea Biglow that

"Th' ain't no futur' for the man nor state
Thet out of j-u-s-t can't spell great."

C. H. PRESTON.

DAVENPORT, IOWA, November 14, 1903.

THE MORAL OF TAMMANY.

TO THE EDITOR OF THE NATION:

SIR: The recent success of Tammany in New York city presents once more an ever-recurring problem to the political idealist. The voters of the metropolis of the United States, it would seem, either deliberately prefer a rotten government, or they are unable to distinguish good from bad. The history of the race belies the former supposition; but to a man who has not entirely lost faith in human nature, a candid survey of municipal government in America would seem to prove the latter. By superhuman effort and united action, and under stress of shame, the intelligent and self-respecting element in the community can persuade enough lax and ignorant voters to throw their potent influence in favor of good government once in a while. But poor, weak human nature cannot be counted on to fight a Lexington or a Concord too often. A political system under which decent municipal government is only occasionally possible would seem to the detached mind at least signally defective. In the meanwhile, it is interesting for the student of political science to observe and note how many blows in the head with a cold chisel and sledge hammer our political idealists must have before they can get it into their skulls that universal suffrage under existing conditions in America is a lamentable failure. E. L. C. M.

CHICAGO, November 9, 1903.

FRANKLIN'S OXFORD DEGREE—A CORRECTION.

TO THE EDITOR OF THE NATION:

SIR: I regret that your correspondent "D.," who furnished, in your issue of June 25, a record of the convocation of April 30, 1762, at which Dr. Franklin was admitted a D.C.L., was, from ignorance of Oxford procedure, moved to draw erroneous inferences as to what took place on that occasion. As these inferences, though of so absurd a nature as to move any one who knows Oxford to laugh outright, might possibly mislead some Americans, and even disfigure future biographies, may I crave space to make the necessary corrections?

"D." would seem to have persuaded himself that the proceedings of that convocation were purposely arranged with "malice prepense," so as not "to do any more honor to Franklin than they were obliged to," and that, in particular, "the natural and proper claims of father and son" were maliciously reversed by providing for Dr. Franklin's son an "escort" of greater honor than for the father! As Franklin was at the time a distinguished, loyal British subject of whom Britain was proud, and of whom the University of Oxford was, of its own accord, showing its appreciation by conferring upon him its highest and much-coveted honor, it is extraordinary that any one could imagine the University stultifying itself by such silly behavior, or could describe the voluntary act of the University as something "they were obliged to"! By whom obliged, forsooth? But the whole hypothetical fabric tumbles to the ground in presence of the simple fact that the procedure on the occasion was precisely the same as on every occasion when honorary degrees are conferred by decree of convocation. "D." is entirely in error in supposing that any special "escort" is appointed on such occasions, and that the selection of this imaginary "escort" has reference to the estimation in which the University holds the recipient of the honorary degree. There is for each faculty an official, whose standing duty it is, in person or by deputy, to introduce the recipient, be he king or kaiser, general or ambassador, poet, philosopher, or South African empire-builder. At the time in question the University gave (besides D.D.) only two honorary degrees, those of D.C.L. and M.A. The recipient of the higher or D.C.L. degree was, as he still is, introduced in a Latin oration by the head of that faculty, the Regius Professor of Civil Law, or (in his absence or illness) by his deputy, while the recipient of the inferior distinction of an honorary M.A. degree was, as he still is, introduced in a Latin speech by the Public Orator (in his capacity of M.A.), or his deputy.

These proceedings were, of course, carried out in the case of the Franklins just as in the case of every one else, before or after. Benjamin Franklin was duly introduced, in the indisposition or absence of the Regius Professor of Civil Law, Thomas Jenner, D.C.L., by his deputy, William Seward, D.C.L., whose Latin oration appears to have been altogether worthy of the occasion; while the younger Franklin (whose honorary M.A. was, of course, intended as an additional compliment to his distinguished father) was presented by the Public Orator, as every honorary M.A. is to this day. Indeed, but for the notable and interesting fact of father and son receiving the higher and lower degrees together—a circumstance, I should think, almost without parallel in the history of Oxford—there was nothing to distinguish the conferment of these degrees from any other conferment of honorary degrees for which a special convocation is held. The personal rank, scholarship, or distinction of the officer of the University whose official duty it is to introduce the graduands, has nothing whatever to do with the matter. At the present moment the Public Orator who presents M.A.'s happens to be the rector of Lincoln College, who in a short time will himself be vice-chancellor, while the Regius Professor of Civil Law, who presents men for the D.C.L. degree, is Dr. Goudy, fellow of All Souls, the successor of the Right Hon. James Bryce. The recipient of an honorary D.Litt. degree is presented by the Professor of Greek (or his deputy) as senior professor of the faculty of arts, while an honorary D.Sc. is presented by the senior Professor of Physical Science. But Oxford would laugh consumedly to be told that the comparative honor of a D.C.L., a D.Litt., a D.Sc., or an M.A. degree is measured by the consideration whether Dr. Merry or Professor Goudy, Professor Bywater or Professor Love, is the more distinguished member of the University!

May I point out that the extract communicated by "D." is not the original, but an imperfect rendering of the Latin record by some one of uncertain scholarship in academic Latin? I subjoin the Latin original from a certified copy kindly furnished by the keeper of the Archives, a comparison of which with "D.'s" version will be found instructive. There is, of course, no such personage as the "Lord Vice-Chancellor"—*Dominus Vice-Cancellarius* is in plain English "Mr. Vice-Chancellor." The labelling of the Rev. William Seward as *Dominus*, on which "D." remarks, does not mean anything more. There is no such Oxford degree as M.C.L. with which "D." credits Thomas Bever, fellow of All Souls. "The most distinguished of young men" would hardly pass with a second-form boy for a translation of *ornatissimum juvenem*, and he would hardly render the plural *bedellis* by "the beadle," if he had once seen the stately procession of esquire and yeomen bedells, or mace-bearers, who carry the gold and silver "pokers" in front of the doctors elect! And surely everybody from China to Peru, who has heard of Oxford, knows that the *Procuratores*, the Executive of the University, are not "heads of colleges" (save the mark!). The giving of degrees is a function of the University, not of the colleges or their heads.

I should be sorry to impute to "D." the *malice prepense* which, in his concluding paragraph, he has so mistakenly attributed to Oxford; but I may be allowed to express the regret that one whose knowledge of the matter is so inadequate should have taken upon himself to draw inferences *in malam partem* from his own disordered notions of the facts, and have tried to give so ignoble an aspect to a proceeding of which Oxford and America may alike be proud.

JAMES A. H. MURRAY.

OXFORD, October 31, 1903.

Term
Paschatis Dño Dre Browne Vice Cancellario
1762

Die Ven. viz Tricesimo Die Mensis Aprilis Anno Dom. 1762 Causa Convocationis erat ut Ornatissimus Vir Benjaminus Franklin Armiger, Provinciæ Pensylvaniæ Deputatus, ad Curiam Serenissimi Regis Legatus, Tabellariorum per Americam Septentrionalem Præfectus Generalis, necnon Regiæ Societatis Socius (si ita Venerabili Cœtui placeret) ad Gradum Doctoris in Jure Civili, et Gulielmus Franklin Armiger Juris Municipalis Consultus ad Gradum Magistri in Artibus admitterentur, necnon, &c. &c. [the usual clause to admit of any other business]. Causa Convocationis sic indicta, proponente singillatim Domino Vice-Cancellario, placuit Venerabili Cœtui ut prædictus Ornatissimus Vir Benjaminus Franklin Armiger ad Gradum Doctoris in Jure Civili, et

Gulielmus Franklin Armiger ad Gradum Magistri in Artibus, Honoris Causa admitterentur.

Spectatissimum Virum Benjaminum Franklin Armigerum præeuntibus Bedellis in Domum Convocationis ingressum Dextraque prehensum Dñus Dr Seward Collegii Divi Joannis Baptistæ Socius sub eleganti Orationis Formula Dño Vice-Cancellario et Procuratoribus præsentabat ut ad Gradum Doctoris in Jure Civili Honoris Causa admitteretur. Quemque hoc modo præsentatum Dñus Vice-Cancellarius sua et totius Universitatis authoritate ad dictum Gradum Honoris Causa solemniter admisit.

Ornatissimum Juvenem Gulielmum Franklin Armigerum a Thóma Nowel A.M. Collegii Orielensis Socio et Publico Oratore similiter præsentatum Dñus Vice-Cancellarius ad Gradum Magistri in Artibus similiter admisit.

Notes.

'The Rogerines: Some Hitherto Unpublished Annals belonging to the Colonial History of Connecticut,' is a work inviting subscriptions; the first part, "A Vindication," in seven chapters, being by John R. Bolles, and the second, the History of this nonconformist society of the seventeenth century, being by Anna B. Williams, who should be addressed by would-be subscribers at No. 82 Walnut Street, Springfield, Mass.

Miss A. E. White, No. 18 West Sixty-ninth Street, New York, invites subscriptions to 'A Book of Bryn Mawr Verses,' to be published about New Year's.

Fournier's 'Life of Napoleon,' translated under the editorship of Prof. E. G. Bourne of Yale, is in the press of Henry Holt & Co.

The Outlook Co. announce 'A Preacher's Story of his Work,' by Dr. W. S. Rainsford, and 'The Story of a Labor Agitator,' by Joseph R. Buchanan.

The Imperial Press, Cleveland, will publish directly Prof. John B. McMaster's lectures delivered last spring at the Western Reserve University on 'The Acquisition of Political, Social and Industrial Rights of Man in America.'

The Robert Clarke Company of Cincinnati will soon bring out a book on 'The Graal Problem: From Walter Map to Richard Wagner,' by J. S. Tunison, the author of 'Master Virgil.'

We learn that Mr. J. E. Spingarn's 'History of Literary Criticism in the Renaissance' is being translated into Italian by Dr. Antonio Fusco of Naples. Benedetto Croce will supply an introduction.

The feature of novelty in the new issue of the 'American Jewish Year Book' (for A. M. 5664 = A. D. 1903-4) is a biographical list (68 pp.) of rabbis and cantors officiating in the United States. Incomplete as it evidently, almost necessarily, is, it should prove most useful.

The activity of Mr. Thomas B. Mosher of Portland, Maine, in reproducing with a taste somewhat *recherché* the literary classics of the mother country, in whole or fragmentarily, but always in dainty and handy form, is well known. A little troop of these companionable booklets has joined the swarm of greater on our table. There is an "Old World Series," exemplified by James Thomson's 'City of Dreadful Night,' Browning's "Pompilia,' and Fiona Macleod's 'Deirdré.' A parallel series, not specially designated, contains this last author's 'The Divine Adventure,' W. B. Yeats's 'The Land of Heart's Desire,' Arthur Symons's 'Lyrics,' and W. E. Henley's 'In Hospital.' A smaller set embraces Andrew Lang's 'Aucassin and Nicolete,' Mrs. Browning's 'Sonnets from the Portuguese,' Swinburne's 'Laus Veneris,' Stevenson's 'Aes Triplex,' and Richard Jefferies's 'A Little Book of Nature Thoughts.' These illustrate very well the cast of Mr. Mosher's net.

Only the eyes of youth could attack undaunted the 'Complete Works of Edmund Spenser' condensed within 900 pages and published in a showy binding by T. Y. Crowell & Co. For adults moved by the need of glasses or by the fear of them, the bait is a brief introduction by Prof. W. P. Trent. Here the type is bolder, but none too bold.

We were scarcely prepared for the Scott-Thaw limited reissue of the tiny Bell-Macmillan 1898 edition of Holbein's 'Dance of Death,' with Austin Dobson's introductory note. The text has been reset verbatim in this country, the form has been elongated about two inches, and Japanese vellum has been exchanged for paper, ensuring a clear but less sympathetic impression. The cuts are identical. Rubricated titles assist the general pleasing effect. Mr. Dobson's note, however, is sadly antiquated. He argues that the designs are Holbein's because in his manner; but meanwhile and very recently the original drawings have come upon the market, and examination shows that they are by more than one hand. Further, it is seen that the copies on the wood were not line for line, some of the drawings being in wash, others in wash and line, and others still in pure line. And again, it is demonstrable that the designer was not always, and hence possibly not at all, the draughtsman for the wood-engraver. In short, hereafter, nobody ought to discuss the woodcuts of the Lyons edition of 1538 except in comparison with the drawings, as has never happened for the whole series. Both sets ought to be reproduced in collotype. The Douce cuts here given for the third time are valuable chiefly as memoranda, not being minute facsimiles of the Lyons originals.

In 'My Favorite Book-Shelf' (San Francisco: P. Elder & Co.), Mr. Charles Josselyn has reprinted passages that he particularly admires from authors of wide repute, from Montaigne to "Ouida." Those who also admire these passages can read them here in elegant typography and binding.

In two handsomely printed and attractive volumes Mr. Sherwin Cody has given the public 'The Best Tales of Edgar Allan Poe' and 'The Best Poems and Essays' of the same author (Chicago: A. C. McClurg & Co.), accompanied by a sketch of the poet's life, and brief but intelligent critical introductions.

We have for some time noted with satisfaction a growing disposition on the part of publishers to bring out new and handsome editions at moderate prices of old and approved books, and we should be glad to believe that this is a sign of a reaction in the public taste against the crude stuff that has been pouring in such a torrent from the presses. No better book could have been chosen for reproduction than the delightful 'Autobiography of Leigh Hunt' (edited by Roger Ingpen, in two volumes—E. P. Dutton & Co.). Other autobiographies may bring before us more important persons, or place us in the midst of more stirring events; but few, if any, are so candid, so free from all self-absorption, so innocent of posing, so charming in style, or which so endear the subject to the reader. But a book so well known—which drew from even the splenetic Carlyle the comment, "I call this an excellent good book, by far the best of the autobiographic kind I remember to have read in the English language; and, indeed, except it be Boswell's of Johnson, I do not know where we have such a picture drawn of a human life as is in these volumes"—can well dispense with eulogy from us. The work is enriched with portraits of unusually delicate finish, is printed in attractive type, and clothed in a very tasteful binding, so as to be an ornament as well as a treasure to any library.

The Rev. Paul R. Frothingham's 'William Ellery Channing' (Houghton, Mifflin & Co.) is a sermon-study of the great liberal preacher and philanthropist, and is substantially the sermon preached by Mr. Frothingham at the unveiling of the statue of Dr. Channing in Boston, June 1, 1903, the hundredth anniversary of Channing's installation as minister of the Federal Street Society. It is of much higher character than the ordinary commemoration discourse, indulging in no fulsome eulogy, but distinguished by sincere appreciation. Here is the quintessential Channing, the various energies and aspirations of the man exhibited in their just proportion; a nice acquaintance being shown with the whole range of Channing's works, and with the biographical material that has accumulated in the course of Channing's posthumous career.

'The Young Pretender,' by Mr. C. S. Terry (Dutton), is an unassuming but satisfactory life of Charles Edward, which is well printed, and is published at a very reasonable price. Little more need be said about it than that the main sources used are already familiar to readers of Stuart literature—with the possible exception of the Egerton letters of James III., which were published by Mr. Terry in the *English Historical Review* (July, 1901). Mr. Lang's life of Charles Edward in the Goupil series has been placed under heavy contribution, but all indebtedness is frankly acknowledged. Though popular in form, this sketch is based on original authorities, and possesses a great deal of the vivacity which the subject demands.

Mr. I. A. Taylor's 'Sir Walter Raleigh' (Dutton) wears precisely the same garb as Mr. Terry's 'Young Pretender,' and is marked by the same general characteristics. Less indebted to any one book than Mr. Terry is to Lang's 'Charles Edward,' Mr. Taylor draws his material from a wide area, and has done more than coördinate the numerous lives of Raleigh which already exist. As every one knows, this paragon of cleverness and grace had some unpleasant qualities in common with the average greedy Englishman of the Tudor period. Mr. Taylor inclines to pass over the shortcomings and to accentuate the brilliance; but the sketch is so short that it cannot be expected to sift evidence minutely. According to Stevenson, "God has made nobler heroes, but he never made a finer gentleman than Walter Raleigh." Mr. Taylor is not an iconoclast, and apparently rests content with the popular verdict.

'The Regency of Marie de Médicis,' by Dr. A. P. Lord (Holt), is a short monograph which centres round the persons of Sully, Concini, and Condé. The author says, in his preface: "The withdrawal of

the Duc de Sully from affairs some months after the death of Henry IV. has always seemed to me a subject inviting more attention and research than has been given it in these days. It was a momentous step for him to take, and fraught with the most far-reaching results for France." But this is only one of Dr. Lord's subjects. The struggle between the Queen and Condé receives quite as much attention as is devoted to Sully's disgrace, and the circumstances of Concini's death are also examined with considerable care. Any study of French history which deals with the six years between Henry IV.'s assassination and the assassination of Concini is bound to find its main interest in the court intrigues of that shameful time. Dr. Lord has made himself sufficiently familiar with the memoirs of the period, and his narrative, while not going very far below the surface, gives a clear account of personal rivalries. The two most striking features of the volume are its insistence upon the diplomatic cleverness of the Queen Regent, and its delineation of the plot which was hatched by the Comte de Soissons and Concini for Sully's dismissal from office.

'A History of French Versification,' by L. E. Kastner of Owens College, Manchester (Oxford: Clarendon Press; New York: H. Frowde), is a valuable contribution to the literature on this subject as it presents in a clear and systematic form all that it is really important for the average student of French prosody to know. Within the moderate limits of his volume of 300 pages, the author has managed to compress so much useful and accurate information, and to present it in so clear and interesting a form, that he deserves both thanks and praise. After stating very simply the principles of French versification, he proceeds to study the component parts, the syllabism, the rhyme, the cæsura, the overflow, supporting his statements by numerous and remarkably well-chosen examples and selections from the poets. The metrical line is very fully treated, and particularly interesting and illuminating are the chapters on "The Strophe" and "Certain Fixed Forms." A full bibliography adds considerably to the value of this excellent book.

There are still singers in Israel, and among the French Canadians of Lowell, Mass., one is making himself heard. A disciple of the Symbolists, but yet more of the Parnassians, Mr. J. H. Roy, in his 'Voix Étranges' (Lowell: L'Étoile, Lepine & Co.), offers some poems of undoubted worth, together with many mediocre ones. His originality is not very great nor very striking, yet he gives fair proof of poetic talent, and, with a restricted output and more patience in the fashioning of his verse, he ought to turn out pieces not unworthy of the appreciation of critics. "Le Gueux," "Aux Temps bibliques," and "L'Inconnu"—all save the last line of the latter—are good work, with a breadth and a color that recall his great masters Hugo and Leconte de Lisle.

M. Maurice Souriau of the University of Caen has published a very full account of 'The Literary Movement in Normandy from 1898 to 1902' (Caen: L. Jouan). The perusal of the booklet brings before the reader the names, among others, of Mme. Octave Feuillet, René Bazin, Léopold Mabilleau, well known in the United States as a lecturer and a thinker, and of M. Souriau himself. Assuredly, the Normans have no reason to be ashamed of the literary production to which their province has given birth.

In an article descriptive of the Wrangell Mountains in Alaska, in the *National Geographic Magazine* for November, Mr. W. C. Mendenhall commends this region to the attention of our mountaineering clubs. Containing the only active volcano in the interior of the continent north of Mexico, it offers many attractive problems to those interested in physical geography or geology and the allied sciences—especially, unique problems of vulcanism and glaciation. The paper is illustrated by some striking photographs, as are also the brief accounts of the rubber plantations of Mexico and Central America and the Ziegler Polar Expedition. Mr. C. H. Burritt describes the work of the Mining Bureau of the Philippine Islands, of which he is chief, and urgently recommends its reorganization, so that it may "take up the work of (a) geological and mineralogical surveys and studies, and (b) the promotion and encouragement of the mining industries." A notice of this season's explorations in the northwest Himalayas, by Dr. W. H. Workman and his wife, states that they have surpassed their previous ascents. The lady reached the summit of a peak 22,568 feet in height and made the highest record for women, while her husband climbed to an elevation of 23,394 feet, which gives him the world's record for men.

The principal contents of *Petermanns Mitteilungen*, number nine, are accounts of an exploration of that part of the Great Rift valley lying between Abyssinia and Lake Stefanie, and of the International Association for the study of earthquakes founded at the recent congress of seismologists held at Strassburg. The constitution is given, and the proposed methods of observation explained. Delegates were present from twenty countries, including two from Japan. Prof. H. F. Reid of Johns Hopkins represented this country. The stability of the population of Europe is strikingly shown by a study of the census returns of the German Empire, the centre of gravity of whose population (*Bevölkerungsschwerpunkt*) has moved only some six miles north by eight miles east since 1816. It is in the Province of Saxony, about twenty miles southwest of Halle. "Westward the course of empire" does not hold true for the German.

In our notice of Mommsen last week, we trust most of our readers corrected, in the middle of the second paragraph, "Mommsen has done for Roman *private* law" into "public;" an oversight of the press.

—Volume VI. of 'The Philippine Islands, 1493-1898,' as its title now reads (Cleveland: The Arthur H. Clarke Co.), covers the period 1538-1588, and includes documents having a very wide range of interest. Jealousy between ecclesiastics and laymen again appears in numerous instances; as does jealousy between the soldiers still remaining from the conquests under Legaspi and the new officials sent over from Spain or Mexico. The decree founding the Audiencia (Supreme Court) in 1583 is concluded, and under 1586 fall a string of documents containing protests to Philip II.'s Council of the Indies against the new Audiencia, as too burdensome for the struggling young colony, still properly in its conquest period (as shown by many references in these documents to the relatively few converts yet made, the small number of missionaries, the few Spanish settlements, etc., for which thus far, it appears, Philip II. had spent 3,000,000 pesos, through Mexico). This protest against the Audiencia is only one part of a long memorial to the Council of the Indies from all the estates in Manila, ecclesiastical, political, and military (signed even by the members of the Audiencia themselves), reciting in great detail the status of affairs in the islands in 1586 and suggesting reforms. Various private letters support it in part, and reveal that the document was a sort of compromise between the various struggling factions, who could yet unite on the main points and could also present to the king a dazzling project for conquering all China. It appears, from a decree issued at the request of merchants in Spain, that China was getting altogether the best of the annual trade, taking 300,000 pesos of Spain's hard money annually and destroying, with her lighter silks, etc., Spain's market in Mexico and Peru. Seventy-five pages of this volume are also given up to selections from Father Juan Gonzalez de Mendoza's history of China as approached through the Philippines from 1576 to 1584 by Spanish friars, and there are two plates representing the title-pages of two books of this history, from the Madrigal (second) edition of 1586 in the Library of Congress. The other illustration of this volume is the facsimile reproduction of the end of an old manuscript in the Seville archives, with the signature of Father Sanchez, the Jesuit sent as delegate to the Council of the Indies to present the memorial above mentioned.

—'Memoirs of Napoleon Bonaparte, from the French of F. de Bourrienne' (Stokes), is not in any exact sense a translation of Bourrienne's 'Memoirs.' The ten volumes of the original have been compressed into one, with the help of very small type and very courageous abridgment. The title-page informs us that the text is "newly edited, with notes," but the notes (such as they are) cannot have cost the editor much trouble. Except for the interpolation of a few passages from other works, he seems to have taken his duties light-heartedly; nor can we find that the interpolations themselves are of great value. A brief and unsigned preface tells us that "no one can read these Memoirs without being convinced of the truth of the narrative, or fail afterwards in forming a perfect estimate of the personal character of Napoleon. The only work in our language which bears any comparison with the present in its graphic delineation of character is Boswell's 'Life of Johnson.'" Such a statement requires little comment from the reviewer. If the editor thinks that internal evidence substantiates the truthfulness of Bourrienne's narrative, what light does he think is thrown on the problem by external evidence? Bourrienne was not a man to write an accurate life of any one with whom he had ever had personal dealings. Nothing is said by the present editor of his character and career. His peculations and his disgrace are passed over without a word. Before stating that the truth of the narrative is obvious, the editor should have investigated the part that was taken in its preparation by Villemarest. He should also have consulted 'Bourrienne et ses Erreurs,'

to which Boulay de la Meurthe contributed as far back as 1830. In fine, it is impossible to praise this book as a piece either of editing or of abridgment.

—Mr. Arthur Hassall's 'Mazarin' in the "Foreign Statesmen" series (Macmillan) is marked by a strong note of admiration. It is easy to disparage this Italian adventurer who became the real ruler of France during Louis XIV.'s minority, but the fact remains that he left his adopted country more powerful than it had been on the death of Richelieu. Rejecting Michelet's estimate altogether, Mr. Hassall will not admit that Mazarin deserves to be styled "an unprincipled actor, libertine, and gambler, who subordinated every question of state to the meanest regard for his personal interests." Neither is he willing to accept the contemporary testimony of the *Mazarinades*, vitiated as they are by the animosities of the Fronde. The best modern authority in France for the career of Mazarin is M. Chéruel, whose seven volumes contain all the essential materials and tend to justify Richelieu's choice of his successor. Mr. Hassall accepts M. Chéruel's appreciation of Mazarin with little modification, and the Cardinal is here made to appear "an indefatigable and patriotic minister, whose fame principally rests upon his success in making France illustrious by her victories and diplomatic triumphs, and in leaving her on his death the leading power in Europe." Mazarin's preëminent talents were those of diplomacy, and Mr. Hassall is mainly concerned with his career as foreign minister. Like Richelieu, he had little talent for finance, and his accumulation of a vast fortune does not represent business ability in the ordinary sense of the term. The opinion that he was ready to sell France if the payment found its way to him, must be discarded in the light of M. Chéruel's researches. He was avaricious, but he possessed more patriotism than many of the French nobles—more, for instance, than the hero of Rocroi. Mr. Hassall endeavors to define Mazarin's position by comparing him with Disraeli, whose patriotism was undoubted, and who succeeded in overcoming the personal unpopularity of his early years. This book would have been more generally interesting if the author had not been forced to keep so closely to the details of diplomacy; but it is not Mr. Hassall's fault that Mazarin was a negotiator rather than a man of action.

—The third volume of papers read before the Massachusetts Military Historical Society (Boston, 1903) contains seventeen discussions of the operations of the Army of the Potomac and two or three of the Confederate Army of Northern Virginia, from the autumn of 1862 to the winter of 1863, when both opponents went into winter quarters. All of the papers are by active participants in some portion of these campaigns, and all illuminate many dark problems of the activities of the two years. Of the seventeen, three, by the late Gen. Francis W. Palfrey, Lieut.-Colonel (now General) George B. Davis, and the late Col. William Allan of the C. S. A., treat of Antietam; General Palfrey's paper being a sort of supplement to and corrective of his volume upon 'The Antietam and Fredericksburg' in the Scribner series of "Campaigns of the Civil War." Fredericksburg and its preliminaries are discussed by the late Gen. William F. Smith and Colonel Allan; Chancellorsville has four presentations from varied points of view, by Maj. James F. Huntington, Col. Theodore A. Dodge, Gen. Alexander S. Webb, and Capt. John Bigelow. The larger number of the papers are upon the Gettysburg campaign, consisting of three by Colonel Davis, two by Gen. Greely S. Curtis (all of these upon the general strategy of the battle); an account of Ewell's attack upon Culp's and East Cemetery Hill, by Captain Edward N. Whittier; the story of Pickett's charge, by Col. William R. Driver; and Colonel Allan's view of the battle and its results from the Southern aspect. There is a good map of Eastern Virginia and an ample index.

—General Webb's contribution is devoted to a vindication of the conduct of Meade, with his Fifth Corps, at Chancellorsville, against certain (largely anonymous) charges of refusal to send his command into critical parts of the fight—charges which were apparently meant to reflect upon his ability or courage in his more conspicuous duty at Gettysburg. General Webb makes clear that Meade was recognized by the majority of his associate corps commanders upon the Chancellorsville field as the most competent officer on the ground to bring order and victory out of the irresolution and lack of purpose into which affairs had drifted under Hooker; and that, far from being slow to push his men into fight, he was positively restrained from action by Hooker, although he chafed intensely under this refusal of his superior officer to take any steps to redeem the campaign from shameful disaster. As to whether Meade should have attacked Lee at Williamsport after Gettysburg, there is the same difference of judgment expressed by the critics in this book as has hitherto been shown in histories of the campaign. Colonel Allan, from the Confederate standpoint, is persuaded that Lee would have been pleased to receive a trial of his entrenched lines by his adversary; while Colonel Davis expresses the opinion which impartial military judges will, in our opinion, be likely to hold, that a possible great opportunity to crush the Confederate cause was refused under excessive apprehension of the consequences of defeat by the assailants. In war there must be hazardous ventures in which loss of life is secondary to the gaining of invaluable time and the chances of a vital success. At other times the lack of resolution "to make or break" snatched victory from our arms, as General Palfrey's paper shows was the case upon both flanks at Antietam, where the Confederates were several times upon the point of rout when the Union attack was suspended.

—Mr. C. A. Dinsmore's 'Aids to the Study of Dante' (Houghton, Mifflin & Co.) is a book of an entirely different character from his 'Teachings of Dante,' which appeared two years ago. The earlier work may be described as the reflections of a clergyman on his first perusal of the 'Divine Comedy'; the present volume, the fruit of extensive study, is a text-book, a compilation, the result of an attempt to include within handy compass all the extraneous information that an ordinary reader of Dante will need. This project has been carried out intelligently and successfully, and the book ought to render substantial service to students who have not ready access to a large library. The early biographies of Dante are reprinted from already existing English versions (and not in the original text, as they are in Zenatti's recent 'Dante e Firenze'); the poet's times, life, personal appearance, character, and purpose are discussed in well-chosen extracts from Church, Lowell, Norton, and Moore; an analysis of his works and the essentials of an exegesis of the 'Vita Nuova' and the 'Commedia' are furnished by passages from the same authors and from Witte, Gaspary, Comparetti, Scartazzini, Gardner, Wicksteed, Federn, Bryce and Saintsbury. It will be seen that Mr. Dinsmore has in the main used good authorities, although the absence of Italian commentators can hardly fail to arouse some misgivings. He himself deals briefly with "Lyrical Poetry before the Time of Dante" and "The Paradiso"; in the former treatise he follows Gaspary, in the latter he draws upon his own 'Teachings of Dante.' The minor works scarcely receive their due, and the unattached lyrics are omitted altogether. Otherwise the book is well proportioned and systematically arranged. Several portraits and diagrams add to its attractiveness and utility. The least satisfactory part is that called "The Moral Teachings of St. Thomas Aquinas," which consists of a few pages of Rickaby's translations from the 'Summa.'

—An important study of Lactantius and his times is that by R. Pichon ('Lactance'; Paris: Hachette). The work is dedicated, significantly, to Gaston Boissier and Ferdinand Brunetière. To the one the author acknowledges immediate inspiration for his theme; to the other, the reader feels, are partly due the freshness, penetration, and literary horizon conspicuous in the book from first to last. M. Pichon gleans a corner of the field which M. Boissier, in his admirable work, 'La Fin du Paganisme,' was forced to pass by. Lactantius, indeed, belongs with the period immediately preceding the death throes of paganism; he is a halfway mark, standing between the apologetes of the third century and the theologians of the fourth. Lactantius's great aim is to interpret Christianity to the cultured classes; he seasons his apologetics with philosophy, and clothes it in a Ciceronian style; he seeks, above all, to prove that Christianity is not subversive of that temporal order which was symbolized for ever, as then it seemed, by the Roman Empire. These several aspects of Lactantius's programme—his philosophy, his theology, his regard for classic style, his political views—M. Pichon examines in turn. He finds that his author, not a striking personality in himself, is for this reason a more trustworthy index of his times; without the depth of St. Augustine or the versatility of St. Jerome, Lactantius is a better model of that sane and inclusive Christian humanism which was the peculiar product of the age. Of the many interesting matters treated in this work, the most important is the discussion of the 'De Mortibus Persecutorum.' M. Pichon settles beyond cavil that the treatise is genuine; he also regards it not only as an indispensable historical source, but also as the first attempt in Latin literature at a philosophy of history.

—At the first meeting in this academic year of the Oxford Philological Society, Dr.

Grenfell read a paper on recent literary discoveries at Oxyrhynchus, with especial reference to a new epitome of Livy, XLVII.—LV., written by one palpably more interested in chronology and also in domestic Roman politics than was the author of the epitome of these books already in the possession of scholars. Hence several new events are revealed, throwing much needed light, for instance, on the war in Spain against Viriathus and on the circumstances of his death. To archæologists the statement is new that Mummius distributed some of the statues he had plundered among cities in Achæa and in various Italian cities. Apart from this epitome of Livy, Messrs. Grenfell and Hunt have in readiness for the forthcoming volume of the Egypt Exploration Fund (Græco-Roman branch) a whole treasury of remarkable finds. They have secured a very long fragment of the 'Logia' of Jesus, which includes the beginning of the collection, and answers several questions raised apropos of the first fragment of 'Sayings.' A portion of the argument of a play of Cratinus, the "Dionysalexandros," proves the Alexander involved to have certainly been Paris, and the play by Cratinus the elder. Besides fragments of Homer, Demosthenes, and Xenophon ('Cyropædia'), there is a specimen of the Pindaric Parthenia. Altogether, Dr. Grenfell's paper was pronounced one of the most important communications ever made in our time to any learned society. It is remarkable, nevertheless, that nothing really of the first rank has yet been discovered. This is emphatically true of the new 'Sayings' of Jesus. They are curious rather than genuinely important. It is easy to see why they were excluded from the Gospels.

A BRITISH COLONIAL ADMINISTRATOR.

My Colonial Service. By Sir George William Des Voeux, G.C.M.G. 2 vols. London: Murray; New York: E. P. Dutton & Co. 1903.

This is the work of an educated English gentleman who, wherever he went, at home and abroad (and he was a much travelled man), had the entrée into the best society. His two volumes abound in good stories, and there are many notices that will be interesting to the student of natural history, resulting from the observations of Sir William Des Voeux when, in early life, he made journeys into the interior parts of British Guiana. The general reader will be likely to skip the extracts from diaries and private letters which are plentifully strewn over the volumes; but, to the student of the government of colonies, these living records will be of high value, as they show the Colonial Administrator at his daily work; under the microscope, as it were.

One of the youngest sons of a younger son of a family in the baronetage, Sir William Des Voeux was educated at Charterhouse School, and at Balliol College, Oxford, when Jowett was "The Master." For the energies of younger sons who have to make their own way in the world, Great Britain is provided with a safety-valve in India and the colonies. To Canada young Des Voeux went, in 1856. Giving up his first intention of farming, he turned to the law, and was duly called to the Canadian bar in 1861. He started the practice of his profession in partnership with Mr. Strong, who since 1892 has been Chief Justice of Canada, and is now the Rt. Hon. Sir Samuel Henry Strong, Privy Councillor of Great Britain. To Des Voeux the solicitor's part of the business, which principally fell to his share, was always repulsive, and it now became more objectionable than ever. He was glad to get out of professional practice by accepting an appointment as a magistrate in British Guiana. During his stay in Canada Sir William received much kindness and made many friends. He had, moreover, at intervals visited the United States—both North and South—and he records with pleasure the kindness he received, from President Buchanan at the White House downwards.

Assuming his duties as a stipendiary magistrate in British Guiana at Christmas-time in 1863, Sir William did much travelling into the back lands of that country, whose territory covers an area of over 100,000 square miles. This he thoroughly enjoyed. But he was not always stationed in a district which gave him such pleasant opportunities of wandering in the wilds. He did duty in districts within the civilized portions of the colony. It was while so employed that he formed the opinion that the East Indian immigrants, imported under the indenture system to labor on sugar plantations, were not fairly treated. His convictions in this regard were put into a memorial to the Secretary of State, then Lord Granville, with such fervor that the London *Times* described the document as the severest indictment of public officers "since Hastings was impeached for tyranny over the lord of the holy city of Benares and over the ladies of the princely house of Oude." The British Government sent out a commission of inquiry to the colony, which pursued its investigations for some months in 1870 and 1871. Much improvement in the system dates from that time, and the East Indian immigration system of British Guiana is now so conducted as to afford no occasion for question as to its beneficial results, both to the immigrant and to his employer. The only cause for wonder is that the Indian Government itself does not use the system to a greater extent to get rid of some of the surplus of its teeming population.

When taking a holiday in Europe in 1866, Sir William spent some time at Cannes, where he had a very interesting interview with Lord Brougham (then in his eighty-eighth year), who had many years before shaken the British Parliament by his eloquent denunciation of the treatment of the missionary Smith (sometimes called the Demerara Martyr), who had been condemned to death on a charge of encouraging the insurrection of slaves in Demerara in 1823, and had died in prison before his reprieve was received from England. Though the old man had lost his memory for present affairs, the name of Demerara lit up the unquenched spirit that still survived within him. His familiarity with minute details of the Demerara insurrection struck Sir William as extraordinary: "During his relation he became much excited by a revived indignation. With one hand he took repeated pinches of snuff, which before the end of the interview was abundantly sprinkled over his shirt front, while his other hand made quick gestures as though he were addressing a large audience." Only once again did our author see this famous old man eloquent. It was at a party given by the family at the Villa Lénore; then, "during the evening he walked through the room, taking, as far as I saw, no notice of any one, and apparently unconscious of what was going on—a truly pathetic spectacle."

In 1869, Sir William was appointed administrator of the Island of St. Lucia, one of the Caribbean group, lying between the British colony of St. Vincent and the French colony of Martinique. His position was much like that of a Lieutenant-Governor, and he had above him the Governor-in-Chief of the Windward Islands, whose headquarters were then at Barbados. One of those chiefs under whom he served was the redoubtable Sir John Pope Hennessey, whom he describes as a very agreeable man socially—an opinion that will be shared by all who had any acquaintance with that lively Irishman, however much one may differ upon the line of policy he pursued in colonies where the treatment of subject races is an ever burning question. St. Lucia is governed under the crown-colony system; that is to say, the laws are made by a council consisting partly of officials and partly of private persons nominated by the Administrator, approved by the Governor-in-Chief, and appointed by the Sovereign, at the instance of the Secretary of State for the Colonies. Over the deliberations of this Council the Administrator presides with a casting vote as well as a deliberative vote. In executive matters, the Administrator is controlled by the Governor-in-Chief, who, however, if a wise man, will not unduly interfere with a competent Administrator. To a man of intellectual vigor, at the age of thirty-five, as Sir William Des Voeux then was, there was plenty of scope for the exercise of governing power, which he did not fail to exercise. The first thing was to purge the civil service, which was a veritable Augean stable. The Chief Justice of the Colony was tried on charges of (1) corruption, (2) drunkenness, and (3) indebtedness to the practitioners of his court; was found guilty of each offence, and dismissed the public service. So sodden had this judge's brain become that, on the trial of a man for burglary, his honor had solemnly addressed him, on conviction, as though his offence had been rape; and there were several other cases of a similar kind. It may here be interjected that in tropical colonies, where one has always a thirst, and always something to drink, one of the most difficult things in administration is to get a conviction against an offending official charged with intemperance. You can prove a transgressor to be guilty of embezzlement, or any serious dereliction of duty, but "a fellow-feeling makes us wondrous kind" when a man stands a chance of losing his office on account of hard drinking which lessens his usefulness for duty and brings scandal upon the public service. The St. Lucia judge had once before been formally accused of drunkenness, but, though the offence was committed in the sight of a great number of witnesses, the accused was acquitted, no doubt from the failure of the witnesses to appear against him. The records of the registry of the court were in a disgraceful state, for the Deputy Registrar had been imitating his legal chief in habits of inebriety; but before regular steps could be taken for his re-

moval from office, this "popular man" died from the effects of drink. Besides these black sheep, the Medical Officer, the Chief Revenue Officer, and a member of Council had been compelled to resign their appointments. The member of Council had been discovered to be defrauding the Excise in connection with his rum distillery.

St. Lucia had long been notorious for being infested with a most venomous kind of snake, the *fer-de-lance*, whose death-dealing bite had yearly added its quota to the mortality in the island. Sir William imported the mongoose, the mortal enemy of snakes, into the island, with such very successful results that, from 22 deaths in 1869, the number had fallen to one death in 1898. The roads of the island were soon taken in hand. Their care had been intrusted to commissioners, most of them planters, who were supplied with labor by the corvée system, a survival from the time when St. Lucia was under French rule. Too often was work done on the planters' private roads instead of on the public highways. Moreover, there was great laxity in supervision of such work as was done on the roads of the colony. For the corvée system a poll tax was substituted with success. There was no public hospital in the island, and such charitable institutions as existed were in wretched condition; and there was a sad want of medical aid for the great majority of the people. All these defects were gradually remedied by Sir William Des Voeux, who also established a central hospital and district hospitals. A new masters and servants law was passed, a Government savings bank was established, and various other useful measures were carried through, to the advantage of the colony. The principal piece of legislation, however, which Sir William Des Voeux was able to accomplish was the passing of a Code of Civil Law, which he managed to carry through the local Council only just before leaving St. Lucia in 1877. It was "the work of three weary years." Connected with it was a code of civil procedure.

When, nowadays, Mr. Chamberlain is anxious that central factories for the sugar industry should be established in the West Indies, it is worth noting that nearly thirty years ago such a factory was established at Cul de Sac in St. Lucia, through the efforts of Sir William Des Voeux, who had been impressed by the successful working of such factories in the neighboring French colony of Martinique. It was only by interesting some of his own personal friends in the venture that sufficient funds could be obtained to establish and work the factory, which did not, however, prove a financial success at that time. After varying fortunes, it is now fairly prosperous, and it has always set a standard of sugar manufacturing for the estates in St. Lucia. It remains to this day the only central factory in any of the smaller British West Indian Islands.

As regards the responsibilities of governing a small colony like St. Lucia, Sir William justly observes that "it is a common notion that the quantity of work required of a Governor increases in direct proportion to the importance of the colony governed." This error was shared by Mr. Gladstone, the Prime Minister, who, meeting Sir William Gregory, then just returned from Ceylon, said: "Mr. Gregory, when are you going to publish your Aristophanes?" Sir William replied: "I have of late years been so occupied with public business that I have made very little progress." To this Mr. Gladstone: "How can you say that? You have only charge of a little island, whereas I in my present position always manage to give one or two hours a day to classical work." Upon this Sir William remarks: "This reflection I venture to think unjust, and I have a confident belief that had even Mr. Gladstone been Governor of Ceylon, he would not have been able to fulfil the duties creditably without more time than he gave to the work of governing Britain." In explanation of his statement, Sir William points out, with good reason, that "the higher the places in the official hierarchy, the more capable, as a rule, are the subordinate workers; the lower the place, the greater is the amount of drudgery to be undergone by the Administrator, who is obliged to do much which is ordinarily done by subordinate officers, and has also to exercise a much closer supervision over his assistants." The amount of work that falls to the Governor of a self-governing colony is but a trifle compared with that which has to be done by the Governor of a crown colony. The Marquess of Normanby, who governed many of the self-governing colonies, told Sir William Des Voeux that when he had spent two or three hours at his desk, he regarded it as a very exceptional day's work, and that there were many days when there was no obligatory duty to be performed. In such colonies, in fact, the Governor reigns but does not govern. In crown colonies, on the other hand, an able Governor may justly say, "I am the State."

For eleven months, in 1877, Sir William was Lieutenant-Governor of Trinidad, that highly prosperous British colony which lies at the mouth of the River Orinoco, awaiting the era of peace that shall develop the trade of the ever-revolutionary republics of Venezuela and Colombia, and make of Trinidad a Hong Kong of the Western world. In his position of *locum tenens* of the Governor of the colony, who was on leave of absence, it was not open to Sir William to be active in initiating a policy. His function was to "carry on" until the Governor should return. Just the same, he held the reins of government with a firm hand. Received with frigid unwelcome, he so lived down dislike of his appointment, by which a local official was ousted, that on his departure he was given a very warm demonstration of good will. During his short tenure of the government of Trinidad, Sir William and his Executive Council had to discuss measures to be taken in view of a threatened revolution in Venezuela, the movers in which were apparently making Trinidad their base of operations—"much to the vexation of the Venezuelan Consul, who kept writing indignant letters on the subject." It was found, however, that nothing could be done under the Foreign Enlistment act unless the revolution had actually broken out and the revolutionists had attained an established footing such as to bring them under the extended meaning of "a foreign state." Under a local law, the Governor could stop the exportation of arms, and that was done. In a journal written at the time, Sir William noted how difficult it was to prevent arms from being sent away, from want of prompt information.

Sir William Des Voeux was the second Governor of the Fiji Islands after they came under British rule, succeeding in that office Sir Arthur Gordon. Both these statesmen were well fitted to lay the foundations of government in a colony where the questions between natives and white settlers required the impartial handling of strong, able, and resolute governors. Sir William pays a well-merited tribute to Sir Arthur Gordon's sympathetic dealing with the Fijians, whose confidence he had secured by his wise and just measures. Order reigned throughout the group of islands, and it was maintained, not by European soldiers, but by a native constabulary. Quite a charming character is given by Sir William of the ex-King of these cannibal islands, Thakombau, who ceded his sovereignty to Great Britain and became a most loyal supporter of British rule; and yet this man had at six years of age been made to club another boy and partake of his flesh, and had, it was estimated, tasted of over one thousand men's bodies before he was converted to Christianity at fifty years of age.

It was an active life of work that the British Governor had in Fiji. Besides questions as to dealing with natives, there were interminable land disputes, some of which were of international interest, owing to the settlement of foreigners within the group. The Wesleyan missionaries, too, to whose great services to the Fijians Sir William bears warm testimony, seemed to feel the loss of their autocratic power over the islanders through the coming of British government, raised questions as to lands, and otherwise made things anything but agreeable for the Governor. The coffee-leaf disease made its appearance, and measures had to be taken for its suppression. The arrival of a ship with cholera and smallpox on board gave the Governor great anxiety to prevent the introduction of those plagues among the islanders, who had not long before been decimated by the introduction of measles. The want of money in the public treasury made it difficult to carry on the administration and to execute public works, and the British Government declined to continue the aid afforded in the early years of annexation. The Chief Justice of the Colony, Sir John Gorrie, had a weakness for engaging in a tussle with Governors, and he gave Sir William a rather anxious time.

With deep regret Sir William Des Voeux records the refusal of the United States Government to join in an international agreement for restricting the sale of arms and ammunition to the natives of the Pacific. He says: "If this question had been generally understood by the American people, I feel sure that they would not have permitted their country to be the only civilized Power holding out against the cause of humanity." It can only be noted here that, as Governor of Fiji, Sir William took part in the epoch-making Australian convention, held at Sydney in the latter part of 1883, as a result of which the Federal Council bill was passed and in time the Commonwealth of Australia evolved. Our readers will find the author's notes upon the statesmen of Australia to be highly appreciative.

When he assumed the Government of Newfoundland in 1886, Sir William found himself for the first time the constitutional

ruler of a self-governing colony. Political parties in the island were bitterly divided upon religious questions. It was not long, however, before the Governor, by the exercise of tact and straightforward dealing, changed this state of things, and some of the Opposition members joined the Ministerial Cabinet. The great question with which the Governor had to deal was that of the French claims to fishing off the shores of Newfoundland. He became converted to the colonists' view of the case, and warmly upheld it against the wishes of the Home Government. A very strong dispatch in support of the colonial interest in the fishery question was written by the Governor to the Colonial Office on the 14th of January, 1887, and is published as an appendix to his book. When the Governor left the colony for Hong Kong there were marked demonstrations of regret at his departure.

Next to the port of New York ranks Hong Kong as a resort for foreign-going shipping. Of the importance of this great commercial centre in the Far East a good idea will be obtained from Sir William's book. Here, as elsewhere, his activity in administration was exercised, and his modes of business and social matters afford entertaining reading. The "strong man" that Sir William had shown himself throughout his various governments was again visible at Hong Kong. But broken health compelled him to resign his Governorship in 1891. He left Hong Kong with marks of esteem from all classes. On his way to England he spent some time at Ringwood, N. J., as he had done oftentimes, with the family of Mr. Abram Hewitt. The author has dedicated his work to his wife, whose devoted care of him in illness and in health will be noted by those who read his book. Lady Des Voeux is a daughter of the late Sir John Pender, who was widely known as a promoter of international telegraph systems.

OLD ENGLISH SILVERWARE.

Old English Plate, Ecclesiastical, Decorative, and Domestic: Its Makers and Marks. By Wilfred Joseph Cripps, C.B., F.S.A., Eighth edition, with 127 illustrations and upwards of 2,600 facsimiles of Plate Marks. Scribners. 1903. 8vo, pp. xx., 521.

Old London Silverware: Its History, its Makers, and its Marks. By Montague Howard. With 200 illustrations and over 4,000 facsimiles of Makers' Marks and Hall Marks. London: B. T. Batsford; New York: Scribners. 1903. 4to, pp. xviii., 405.

Of the two useful books named above, the first is the standard work on the subject. This can hardly be questioned when we consider the surprising fact that a book on a subject so peculiar, a subject so limited in interest, should now be in its eighth edition when the first was of 1878. The volume has always been of the same medium octavo size, except that, after the appearance of the sixth edition, there came out what was announced as a "Library Edition"—that is, the book as it then existed was reprinted on somewhat larger paper with a very few changes in the text. How many copies in all have been sold, nowhere appears. It is only certain that the demand for the book has been continuous, and that it is referred to on all sides as a "sufficient authority for all the matters most immediately requiring decision in the study of ancient plate." This circulation, however, has been mainly in England. It is only within a few years that the love of old silverware has become international, so to speak—has been carried from land to land—so that the comparatively simple pieces which remain to us of old English make are sought for in the United States by those alone who can afford to pay the enormous prices to which they mount in the struggles of the auction-room. When a not very showy piece of eighteenth-century silverware is found to have been sold at auction at the price per ounce of about two hundred pounds sterling—that is to say, that the twenty-ounce piece has brought twenty thousand dollars—it is evident that the millionaires of a foreign country have begun to compete, and that they will compete again, with those of England for the possession of the rarity.

Nor is it unfair to express in such terms as these the estimate which a student of fine art must make of the struggle for pieces of old English silverware. That silverware is not very beautiful in design except for the score of ancient (*i. e.*, pre-Reformation) chalices which alone remain, and the best dozen or two of eighteenth-century urns, such as the Ashburnham Cup by Lamerie, figured in a good photogravure in this volume. The two or three score of early communion cups and tankards have a certain simple charm; some of the ancient pieces of domestic plate, though not all of them, are really of artistic value. Tolerable woodcuts of these abound in the pages of Mr. Cripps's book. Thus, the pages from 301 to 310 contain sufficiently good reproductions of half-a-dozen specimens of the old "monumental" salt; and of these, two at least are really fine in design—worthy of any epoch and a credit to the nation which produced them. The pages which follow deal with flagons; and then come cocoa-nut cups, ostrich-egg cups, drinking horns, beakers, hanaps, "standing cups" (which are in most cases the same as hanaps), and cups of outlandish form and fantastical conception like the Peahen, or the Royal Oak, with silver acorns swinging from its body; or the Pepys cup which is preserved at Clothworkers' Hall in London. These pieces are not to be possessed by the private collector. They are the remains of the great possessions of mediæval England, the little that has come down to modern times from the epoch before the plunderings of the religious reformers and the sacrifices made by friends of King Charles the Martyr. They are held by public and semi-public bodies which will not relinquish them in our day.

With the eighteenth century more illustrations are to be had, and many more existing pieces are represented in a way by each given illustration. The present edition of Mr. Cripps's book contains several photogravures which were not in former editions, as well as the frontispiece, which represents a salver of 1595 and a ewer of 1617, both in the Royal Collection at Windsor Castle. The other four photographic illustrations give a splendid cup at Pembroke College, Cambridge, one in the British Museum, one in Clare College, Cambridge, and a tea-caddy which belongs to the author of this volume. The one cup which is at Clare College is one of the pieces made by the famous Lamerie, the most celebrated English goldsmith of the eighteenth century, and it is an exquisite piece, faultless in form and with less of the violence of detail than might be expected of a piece belonging to the mid-eighteenth century. Another covered cup by Lamerie is given in outline drawing on the page following the photograph; and eighteenth-century flagons, tea urns and chocolate pots are given elsewhere in sufficient numbers to remind the student that the ages follow one another without resembling one another, according to the old proverb. Eighteenth-century architecture (and more especially interior decoration) is not, as we find it in England, a bewitching thing for us to study. But the eighteenth-century silver was as charming on the whole as even the work of the years before Elizabeth.

The subject of the Reformation and the destruction of church silver under Henry VIII., and again under Edward VI., is treated by our author with singular discretion. Dr. Jessopp, writing from the point of view of the aggrieved, the saddened, the indignant Churchman, is right to become almost inarticulate with grief and rage at the wanton spoliation of Henry's reign; but Mr. Cripps, surveying the whole field and finding that only a part of the church plenishing confiscated under that King and his Protestant successors was misappropriated—that much and probably the largest share of it was turned over to the Crown, according to a movement so universal among the reforming clergy and their followers among the people that it may rightly be called national, or else was used under the authority of episcopal or royal ordinances for the repair and enlargement of the church buildings—can not do more than express such regrets as we all feel at thinking of the splendid art of the past which our less remote ancestors threw away, so wantonly, as it seems to us. Henry VIII. allowed his favorites to plunder—there can be no doubt about that; but when the ordinances of his successor are examined, and it appears that through a series of years it was a deliberately followed-up plan to deprive the parish churches of what they possessed in the way of Roman Catholic art as the cathedrals and the monasteries had been stripped under the reign of Henry; and when it appears again that, immediately after the brief Roman Catholic régime of Mary I., the prelates of Elizabeth's time renewed this puritanic, or, at least, anti-Romanist crusade until the churches were left impoverished as they are now, with only a pair of communion cups to represent the splendor of mediæval plate which they had held a half century earlier, then the regret that Mr. Cripps asks us to feel with him is of that sort which, as John La Farge has expressed it somewhere, is a part of the general evolution of fine art. Mr. Cripps makes it clear that, were it not for the opening of the coffins of bishops, we should have not one-third of the ancient chalices which we now know of. It seems a curious piece of poetic justice that the devout Catholic bishops of an earlier time should be denied the privilege of quiet rest in their graves in order that the spoliation of a hostile creed in later times might be made good. But indeed the whole record set forth in a general sort of way by Mr. Cripps, and to be found more fully worked up in books of a less special character, is such an extraordinary contribution to the his-

tory of religion that those who wish to see the weight of religious influence on politics diminished could not do better than to circulate a knowledge of it.

The earlier chapters of this volume deal very briefly with the making and the care of the plate, its alloys, its design, the tests of its value: and at greater length with the mediæval guilds and their works and ways. This fulness of treatment of what seems the secondary subject is to be accounted for by the extreme importance given to the marks put upon silver by stamping, or, as it is called, punching, upon the study of which all our knowledge of epochs and changing styles has been found to depend. The dedication, to that very remarkable amateur (a man whose study of a minor subject like this has made him famous), C. Octavius S. Morgan, F.R.S., F.S.A., remained unchanged until the sixth edition, though it is not to be found in the present volume. It was this student of the art who showed how to use in a truly scientific manner the "hall mark" and the other marks which are appended thereto. That was in what now seem early times, for he began his work in a serious fashion before the middle of the nineteenth century. The latest knowledge on the subject is certainly included in chapter ii. and the chapters following of Mr. Cripps's book; in fact, the larger part of it is more or less closely concerned with this very matter of the identification of every piece by means of its different marks—its identification in the sense of its certain association with a period and an individual goldsmith. The leopard's head—that is to say, a lion's head presented frontwise and crowned, "gardant," is the royal mark—the evidence that the tax has been paid; and the other marks which accompany it on every old piece tell the skilled reader of such things, or him who will look up the tables, just where the piece was made, by whom, and in what year

The second book on our list is a very different one in appearance, for it is a handsome quarto, containing very few leaves, of very heavy paper, and many illustrations from half-tone blocks. It resembles Mr. Cripps's, however, in its presentation of great tables of marks, and these are, though limited to London silversmiths, nearly all that is needed; for, as the author points out, there is no great amount of silver known to us in England outside of that made in London. Beside the half-tones mentioned, there are five full-page illustrations of silver-gilt pieces, the print in each case being of the closest imitative character; and this will carry with it to the thought of every student of such things a suggestion that they are not very attractive or very instructive. And, truly, one could wish them away if they could be replaced by good photogravures like those in Mr. Cripps's book. The attempt to give the metallic lustre and color has unmistakably destroyed the value of the reproduction. But the many half-tones are good, whether they are scattered through the text or printed as separate plates, and, in order that they may be good, the whole book, plates and all, is printed on the same heavy-coated paper. It is well-chosen paper, too, without the exaggerated gloss and loaded look of the ordinary "cut" paper, and in this way we secure that most desirable characteristic of the richly illustrated book—a uniform quality of paper throughout, with text and pictures on the same leaf or on precisely similar leaves.

The addition of eight portraits of eminent goldsmiths would be more to the purpose if the names of the engravers were given, for in each case the portrait is reproduced from an engraving generally contemporary and always worth tracing. On the other hand, the pseudo-portrait of St. Dunstan (page 3) is really an absurd thing to include in such a collection, for, of course, it has no possible authenticity, and it is treated in a way to be nearly ridiculous. One would like to know what is the authority for a portrait of Henry Fitz Alwyn, Lord Mayor of London, as well as goldsmith, and a dignitary of real importance in the twelfth and thirteenth centuries; but this authority also is held back from us.

Such omissions remind the reviewer that, in reading the book, he has noted a singular lack of literary practice. Literary skill is not so much in question—there is no pretence to that; but the way in which the statements themselves, even the simplest ones, are made and are associated with one another gives evidence of a much less complete knowledge of the conventions and the capacities of English writing than does the matter of the book of any shortcomings in the author's knowledge. In fact, it is evident that the author is a member of a great New York business house, goldsmiths in the modern sense, a firm known for their extensive and enlightened dealings with ancient and artistic wares.

Hawthorne and his Circle. By Julian Hawthorne. Illustrated. Harper & Brothers. 1903.

In no respect is Mr. Julian Hawthorne's book more satisfactory than in its reflection of his own feeling for his father. We get this in many places; nowhere better than in the account of the elder Hawthorne's return from the Isles of Shoals, where he had been spending some weeks with Franklin Pierce in the fall of 1852, the year of Pierce's election to the Presidency and of Hawthorne's writing of his campaign biography.

"He came, and there was a moment of indescribable glory while he leaped from the carriage and faced the situation on the doorstep of his home. His countenance was glowing with health and the happiness of home-coming. I thought him, as I always did, the most beautiful of human beings, by which I do not mean beautiful in feature, . . . but beautiful in the feeling which he aroused in me beholding him. He was beautiful to be with, to hear, touch, and experience."

Hawthorne was this to all his children and preëminently to his wife. There was much in his writing to make it appear likely that he would be an uncomfortable household companion, and it is certain that he cursed the weather a great deal, and much beside, with persons here and there. But his home was for him "a garden of refreshment," and there was no measure to the devotion which he lavished there. His son's unaffected warmth of admiration in these pages renews the impression made by his 'Nathaniel Hawthorne and his Wife.'

"This is a story of people and events, not a study in literary criticism." It is written in a streaming style, so different from the father's that the son seems to have inherited from him the *habit* of writing, but not the art; certainly not *his* art. There is more of the mother's effusiveness than of the father's delicate restraint. There is a defect of taste in some of the personal allusions, as where we are assured that young Browning "was not such a mollycoddle and ass as he looked"; and this defect is gross in the choice of phrases from the text for running head-lines. Many of these are in the manner of the yellow journal: "Legs and Intentions"; "Half-witted girl who giggled all the time"; "She ripped the man open"; "Her skeleton, huddled, dry, and awful." The narrative begins with the days when Hawthorne was writing 'The Scarlet Letter,' and the son's shadowy and incoherent recollections of this period are pieced out at every turn by later knowledge—happily for us, for he knew nothing at the time of 'The Scarlet Letter,' not even that such a book existed until a dozen years after its publication. There was, however, an actual recollection of a big man with a brown beard and shining brown eyes, who came one day, bubbling over with enthusiasm, talked volubly, and went away, leaving Hawthorne and his wife smiling at each other. The man was James T. Fields, and he had 'The Scarlet Letter' in his pocket—not the book as we know it, but the original form, in which it was the longest of Hawthorne's short stories, not the shortest of his novels.

From Salem Hawthorne went to Lenox, and the life there is described well from the boy's point of view. Hawthorne's Berkshire acquaintances were Herman Melville and G. P. R. James, and about these is spun some mingled yarn of earlier and later recollections and impressions. Far more interesting is the description of Horace Mann, whose wife was a sister of Mrs. Hawthorne, and Elizabeth Peabody, who furnishes some laughable particulars. It was to Mann's house in West Newton that the Hawthornes went after the Berkshire weather had proved intolerable. Mann's portrait by his nephew is undoubtedly sincere, but it is not flattering. Hawthorne's indifference to abolitionism colors the description of Mann's anti-slavery sentiments: "Horace Mann was ready to out-Garrison Garrison; he thought 'Uncle Tom's Cabin' a somewhat milk-and-water tract." His discovery of Hawthorne's smoking habit was a tragical event; it obliged him to assure Hawthorne that he had in a measure forfeited his respect. His lack of humor and grim dogmatism are not, we fancy, exaggerated much, if any; but an impression derived solely from this depreciation would be miserably unjust to a man whom Theodore Parker ranked with Garrison and Emerson as one of the three greatest men that he had known.

We have some interesting details of Hawthorne's literary methods. The manuscript of 'The Scarlet Letter' was destroyed by the printers; Field's confidence in the greatness of the book assuring him no prevision of the manuscript's ultimate value. "All the extant manuscripts are singularly free from erasures and interlineations; page after page is as clear as a page of print." This is too sweeping. It does not hold true of the four trials with one subject: 'Septimius Felton,' 'The Bloody Footstep,' 'Doctor Grimshawe's Secret,' and 'The Dol-

liver Romance.' Here the long fumbling with his problem tortured the lines of Hawthorne's manuscript into corresponding twists and turns.

In the chapter on Hawthorne's second Concord residence, Emerson is described with much elaboration and equal sympathy, especially as related to his fellow-citizens. "An Emerson who can make common men feel more like Emerson than he himself did, is the kind of man we need to bring America up to her ideals." Hawthorne read Emerson with enjoyment, but Emerson could not return the compliment. He was too much a lover of the sunshine not to feel chilled by Hawthorne's realm of shadows. Thoreau, Ellery Channing, and Alcott are barely mentioned; Alcott only to be disparaged. It is good to have the too much forgotten work of E. P. Whipple praised so ardently. For Stoddard, too, there is a cordial word, written, we remark, as if without knowledge of his death some months since.

Less than a hundred pages bring us to Hawthorne's Liverpool consulship, and for the remainder of the way we have an English or Italian setting to his works and days. His 'Our Old Home' hardly prepares us for the assurance that he fell deep in love with England and was homesick for it in Italy, and in America when he returned here broken in health and with only a few years more to live. There was much to make those years unhappy—his country's misery, his failing invention, his daughter's wavering mind (a Roman fever's sad bequest). The English period was singularly barren of acquaintance with distinguished men of letters. Its story is resolved for the most part into a list of those Hawthorne did not meet—Thackeray, Dickens, Tennyson, and many others. Monckton Milnes and B. W. Proctor (Barry Cornwall) were exceptions to the rule. Mrs. Proctor is described as "a woman of intellect and charm," where for "charm" we should have a word of far more pungent signification. Hawthorne's friends Bright and Bennoch were as dear to him as Bridge and Pierce in America. He seems to have been shyer of the literary class than of any other, and to have got on better with the jolly rogues of the Salem Custom-house than with the Concord "intellectuals," whom he enjoyed to the degree that they abjured their specialties. Both James Martineau and his sister Harriet, "a respectable female atheist," are treated by Mr. Julian Hawthorne with much disrespect, James with supercilious ignorance as having remained in a Unitarian pulpit "long after what he was pleased to call his convictions had ceased to possess even a Unitarian degree of religious quality." For those who know something of Martineau's standing, it is not necessary to correct this gross impertinence. It is a minor matter that the Rev. William Henry Channing is described as "a nephew, I believe," of Dr. Channing, "and the brother, therefore, of Ellery Channing of Concord." But Dr. Channing had at least four brothers, and while William Henry Channing was the son of his oldest brother Francis, Ellery Channing of Concord was the son of his brother Walter.

Hawthorne appears to have come out more into the open in Italy than anywhere else, especially with men of letters, artists, and the like. But in Rome he passed through several distinct phases of feeling—first, disappointment with the abominable weather. With the improvement of that came a new sense of creative power. Next, a profound depression, caused by his daughter's critical condition, set in; recovering from which as she recovered, he fell into a new slough of despond when it became evident that her recovery was partial and could never be complete. To write 'The Marble Faun' under the stress of such vicissitudes must have been a difficult task. The Faun of Praxiteles was so exciting to his imagination that it is strange to find him describing the statue inaccurately both in his notes and in the novel. The left arm, he says, "hangs carelessly by his side." There are good bits about Story the sculptor and the Brownings, Miss Bremer, Mrs. Jameson (of whose demonstrative affection Hawthorne stood somewhat in dread), Hiram Powers, Harriet Hosmer, ex-President Pierce, and William Cullen Bryant, with "his white Merlin beard and tranquil but chilly eyes." The description of Mrs. Browning is in Mr. Julian Hawthorne's most daring manner. A great difference is remarked between the Robert Browning of that time (1859) and the same man, yet not the same, twenty years later. No one who remembers Pierce's extreme kindness to Hawthorne will regret the son's lavish tribute to his worth, however doubting that he was "a strong man," or that, if he "had come to Europe to get the scent of Washington out of his garments," he could so easily have been purified.

Around the Caribbean and Across Panama. By Francis C. Nicholas, M.Sc., Ph.D., etc. Boson and New York: H. M. Caldwell Co. 1903.

Dr. Nicholas justly remarks: "Of all the regions adjacent to the United States none are more attractive or present such varied conditions of development, scenic beauty, and commercial opportunity as the countries about the Caribbean Sea." His book, indifferently illustrated, is mainly an effort to illustrate this region by incidents of travel and by tales of (mostly very mild) adventures. A map, indicating the "localities where adventures occurred," accompanies the preface, and lends color to the suspicion that the author had scarcely any other object in his travels than to run after awkward situations and mishaps. Descriptions of the countries are few and far between, and devoid of local color. The author's individuality is the most salient feature, but noteworthy also is his description of what he calls the "death dance" of the Talamanca Indians of southern Costa Rica, and his two chapters on the Goajiros. These contain some ethnological information of value, although it is clear that Dr. Nicholas is by no means a trained ethnologist. Of the interesting regions on the Rio Strata, at Santa Marta and the high plateau at Bogotá, we obtain only a casual glimpse through the maze of rather unimportant personal happenings designed "to give a much clearer idea of the conditions and of the circumstances which one must expect to encounter."

It is regrettable that Dr. Nicholas did not improve the good opportunities afforded on his extensive journeyings in Central America and through northern Colombia, now that these countries have suddenly come to the fore in connection with the troubles on the Isthmus. He might have told us of the fundamental difference between the people of Panama and their hitherto rulers on the central plateau of Cundimarca or Bogotá. Whereas the indigenous population of Panama is largely mixed with the negro, the central Colombian is in a great measure of Indian blood mixed with whites. Whatever we may think of the negro, it is certain that he is eager to follow progress, if only from his imitative propensities. The Indian, on the other hand, is not merely conservative, but retrograde, wherever he is in the majority; and where he (or the mestizo) lives at great altitudes, it is natural that his character should become wary and crafty like that of mountaineers in general, but more so. Where such fundamental contrasts exist, political cohesion becomes impossible.

The Responsibilities of the Novelist. By Frank Norris. Doubleday, Page & Co.

This collection of short papers written by the late Frank Norris expresses great zeal for his profession, and an ingenuous conviction that, if practised in conformity with his theories, it is an indispensable agent in the progress of humanity towards perfection. Personal ardor for his work is the interesting quality of the book, compelling the attention and sympathy even of readers who permit themselves to smile at the author's self-sufficiency, and who may be bored by his clamorous manner of making the simplest statement.

After Mr. Norris's death the opinion was generally expressed that we had lost a good novelist who would surely have become a great one. Speculation on what might have been is never very profitable, but in this instance was perhaps justified by the imaginative force and eager spirit evident in Mr. Norris's published fiction. Assurance of his splendid possibilities can hardly survive the republication of these casual papers, which had better have been allowed to perish, for they show defects—defects of knowledge, of judgment, of taste—that militate against achievement of greatness in any direction. Such defects, it is true, might have been modified by time, but they seem to be rooted in an unconscious ignorance, showing itself in disparagement of things Mr. Norris did not know, of advantages and accomplishments that he did not possess, in a total absence of personal background and of attachment to a past that should stand for an older self, from which one's feelings and theories may derive strength and value.

It seems ungracious to dwell on the imperfections of a writer who in his short span of life went far, and it would be superfluous to do so, were it not that his work expresses in an extreme fashion some regrettable idiosyncrasies of young American writers, especially of those who come out of the West. Few of them have Mr. Norris's native force, but they have similar faiths, and can shout them as vociferously as he, even in self-contradiction. For them the Declaration of Independence marks the dawn of time; their country, besides being "God's own country," is his only one; at their birth, Truth (which they never define but always spell with a capital letter) came up from the bottom of her well to salute them; according to them "The People, The Plain People," are (as they delight to say,

"in the last analysis") the appointed infallible judges of all things, and, the judgment of literature being their special function, they have decided offhand, yet finally, that "mere literature" must go. The prose style of this happily confident band is an experimental (perhaps accidental) blend of many ostentatious styles (Carlyle, Dickens, Macaulay), and their vocabulary is largely their own.

Every one of Mr. Norris's articles illustrates some of these idiosyncrasies. About the Truth and the Plain People and the duty of the novelist to provide the one for the other, his concern is shrill:

"In the larger view, in the last analysis, the People pronounce the final judgment. The People, despised of the artist, hooted, caricatured, and vilified, are, after all, and in the main, the real seekers after Truth. . . . Is it not, in Heaven's name, essential that the people hear not a lie, but the Truth? If the novel were not one of the most important factors of life; if it were not the completest expression of our civilization; if its influence were not greater than all the pulpits, than all the newspapers between the oceans, it would not be so important that its message should be true. . . . Yet novelists are not found wanting who write for money. I do not think this is an unfounded accusation. I do not think it asking too much of credulity. This would not matter if they wrote the Truth."

The strain comes o'er the ear like the voice of the great Chadband, demanding to know: "What is the T-r-ewth? It is not a lie. No!"

Mr. Norris is very hard on his brethren who wilfully trick the Plain People, offering a lie in glittering armor; but, on the whole, he concludes that it is better for Americans to read them than not to read at all, because "books have never done harm." The only Americans who may not read are the modern novelists. They are peremptorily forbidden such recreation, lest they should not be able to address the Plain People simply and intelligibly. "Books have no place in his [the novelist's] equipment, have no right to be there —will only cumber and confuse him." The writer himself has indeed suffered no little confusion from the reading of books, either too much or too little. In a paper called "A Neglected Epic," he laments the failure of contemporary Americans to celebrate in epic form "the conquering of the West, the subduing of the wilderness beyond the Mississippi," and mentions the achievements in that way of other and earlier races. Why, he wonders angrily, has no great bard sung the Alamo, where Texans fought and died for several things enumerated, much more honorable than "loot and the possession of an adulteress"; and why, again, is "Achilles, murderer, egotist, ruffian, and liar," a hero, while the apparently immaculate name of Bowie "is perpetuated only in the designation of a knife"? Clearly, Mr. Norris did not read enough to be disturbed by a Homer question, or by any suggestion that national epics have not been written at the moment when the action celebrated was going on. He seems to think that Homer sat before the beleaguered city while the great fight waged, calmly inditing an immortal tale; that Tasso accompanied the crusaders to Jerusalem; and that *trouvères* were singing the song of Roland when he blew his horn for succor at Roncesvalles. Though epics seemed to him desirable productions, he may have thought that to know anything about their history savored of scholarship, a thing he despised and distrusted. "The United States," he writes, "in this year of grace nineteen hundred and two, does not want and does not need scholars, but Men—Men made in the mould of the Leonard Woods and the Theodore Roosevelts." And, pursuing the subject hotly, he quotes "so high an authority as Dr. Patton of Princeton, who has recently said that nowadays men do not go to college to become scholars, and that it was time and money wasted to try and make them such." This was an indiscreet speech for any professor of any university to make, and if Dr. Patton should read the works of Mr. Norris and many of his contemporaries, he might come to fear that the responsibilities of a professor may be almost as solemn as the responsibilities of a novelist.

Erasmus. By Ernest F. H. Capey. With thirteen illustrations. E. P. Dutton & Co. 1903.

It is just four hundred years since Erasmus's 'Enchiridion' was first published, and three hundred and sixty since it was condemned by the Sorbonne and burnt by order of the Parlement of Paris. That particular work has now only a scholarly and historic interest, but some of its fellows continue to be reprinted at tolerably frequent intervals. The confessedly incomplete bibliography offered in the present small volume by Mr. Capey shows six editions of the 'Praise of Folly' in the last century (one in 1900); and the 'Colloquies' is still on the wing. Moreover, the past half-century has witnessed a marked revival of lives and studies of Erasmus in Europe at large; in England particularly during the past twenty years, from Meiklejohn in 1885 to Froude in 1894 and Nichols in 1901, besides Professor Emerton's American contribution (1899), not least in worth. To this series Mr. Capey adds a modest compendious view of the great humanist's career which can be heartily recommended as the beginning of knowledge. It is eminently candid in tone, keeps the chronology well in hand, epitomizes the 'Praise of Folly,' quotes freely from the 'Colloquies' and from other writings (including the correspondence), and fairly sets forth the claims of Erasmus to distinction and admiration. Luther's indebtedness to him and their difference as reformers are faithfully exhibited, and one may discern how Erasmus, falling far short of Luther in qualifications for effecting the emancipation from Rome, was still the more advanced liberal, treated the Scriptures with the freedom of the higher criticism, handled the corrupt clergy and orders without gloves, maintained that marriage was no sacrament, advocated the higher education of women—and still refrained from taking his place beside the struggling Luther, and even put obstacles in his path by his own equivocation and by censure and repudiation of his natural colleague. If we offset Luther's translation of the Bible with Erasmus's first edition of the Greek New Testament, in all other respects the Dutchman's primacy in world literature is most conspicuous.

Those who would glimpse all this can not do better than put themselves under Mr. Capey's guidance. His entertaining biography is tastefully printed, and is well and copiously illustrated.

Introduction to Classical Greek Literature. By William Cranston Lawton. Charles Scribner's Sons. 1903. Pp. 367.

The scholar who undertakes to write a history of Greek classical literature in one volume embarks on a peculiarly difficult enterprise. Not the least of his perplexities is the first question that confronts him—What class of readers shall he address, and address with consistency? Can he beguile the general reader with his honeyed accents, while the student, like the Lucretian schoolboy, insensibly imbibes the very latest prescription of modern philology? Nothing antagonizes your general reader like the disagreement of doctors. What he wants is a pleasant and picturesque statement without discussion. Yet he would feel defrauded by the omission of the "Homeric Question," which is a popular mystery, more real than the poems to the average man who may never read Homer, but wonders now and again how the "Question" is getting on, much as he speculates about the fourth dimension or the prospects for finding the Pole. In view of this delicate irritability of the reader who is not a student, what scholar is prepared to write, without faltering and without reserves, an account of the Homeric problem with which he can face both the student and the lay reader? If he attempt this conciliation of two really distinct interests, he will probably be considered too popular for the classroom; and how many general readers will he secure? This is a query "too sad to insist on."

Mr. Lawton addresses himself to the young student; but, after all, even the young student who is learning Greek need not be alarmed by the occasional appearance of a Greek word or letter. He might as well, for instance, acquire the habit of using the alphabetical references to the books of the Iliad and Odyssey, which all scholars have adopted. Mr. Lawton's careful exclusion of every trace of the Greek language in an introduction to its literature seems to imply an ambition to secure the very young student and the general reader at one blow. We believe this to be a fundamental mistake of policy in any work not designed for Chautauqua.

Mr. Lawton's statements are very clear, very elementary; he would not, of course, talk to the advanced student about "Princess Briseis" and "Prince Hector." Yet he constantly insists on "loving perusal" of the Greek masterpieces, a phrase incompatible with the idea of mere translations; he is, therefore, addressing a student who will go farther, who is even now reading a Greek text, a student in whom there may be the makings of a Wilamowitz or an Andrew Lang. That undeveloped taste for philology or for literature should be stimulated by a genuine introduction; the curiosity of the student should be roused, not satisfied. We do not believe that any student who reads Mr. Lawton's book will feel that he has been brought face to face with either the results of modern philology or the beauties of Greek poetry. For Mr. Lawton does not really introduce him to the Greek poets; the verse translations that crowd his pages, even though they were the best of their kind, would still fail to bring the student within sight of the original. These translations are chiefly Mr. Lawton's own work, and to say that they are not the best of their

kind is only to say that he is not one of the few—they can be reckoned on the fingers of one hand—who have succeeded in making a verse translation of a Greek poem that can claim to be poetry, and also, to some slight extent, Greek. The English hexameter is a terrible instrument. Mr. Lawton proves once more that the "accentual hexameter" cannot stand as the equivalent of the Homeric line.

"He and his children's children, who shall be hereafter begotten" (p. 18),

and

"Who like unto a god was adored in the town of the Trojans" (p. 81),

are not really verse at all. In each case, prose would have been more effective, more truthful. Sappho has always been as cruelly betrayed by her translators as Homer himself:

"Whom dost thou desire that Persuasion," saidst thou,
"Gently lead to passion for thee, or who, oh Psappha, has wronged thee?" (p. 118).

Lines like these would, we believe, completely quench any reader's, any student's, desire to know more of the poetry to which even Mr. Swinburne felt that he could not do justice in a direct translation. The prose version of this ode in Wharton's little book brings the English reader as near to Sappho as he can hope to be brought, except perhaps by Mr. Swinburne's paraphrases.

On the side of philology one must regret that, since Mr. Lawton devotes ten pages to "Homeric Problems," he has not given some sort of historical survey that should include at least the names of Wolf, Kirchhoff, and Fick, which are ignored in his pages.

A rather more detailed survey of the relation of modern archæology to the Homeric poems would have been of greater service to the student and of more general interest than the separate chapter which Mr. Lawton devotes to the dactylic hexameter. The book practically ends with the chapter on Plato; the twenty-six pages which give a bare summary of "The After-Time" might just as well have been omitted; Mr. Lawton evidently thinks so himself when he tells us that "the real end of the story is the death of Plato and Demosthenes" (p. 3). This is one of the few statements of fact in the book with which we emphatically disagree. The "story" of Greek literature hardly ended with Lucian; still less did it end before Theocritos. Mr. Lawton gives no account of the Greek MSS., and his bibliographies are far from satisfactory.

We regret that a piece of work so well meant, a work that so sincerely reflects a love of the Greek classics, should be marred by so many minor defects. The parallel on page 141 of Alfred Austin and Bacchylides is wholly misleading. When Mr. Lawton, on page 127, compares a poem of Alcman with one by "our youngest master," we see that by that phrase he must mean Mr. Kipling; but we cannot admire the comparison or the expression of it. To say of Sappho (p. 114) that "there is evidence that she was a happy and devoted mother," is to go too far; to compare her with Margaret Fuller is to take liberties with both; but when Mr. Lawton adds that our maidens and mothers and nature-lovers will do well to turn instead to Adelaide Procter, Helen Hunt, and Edith Thomas, he hurries to jump the abyss that divides Sappho from the monthly magazines; it is as though he felt them to be safer ground, as indeed they are.

Mr. Lawton translates two famous lines of Hipponax:

"Two days are sweetest in a woman's life—
When someone weds her, and her burial morn."

This does not really express the fierce original: "There are two days on which a woman gives a man most pleasure—the day he marries her and the day he buries her." We by no means agree with the statement on page 191 that Æschylus would have been shocked by the modern sympathy with Prometheus; one might as well assert that Milton had no sympathy with Satan. To tell the young student that Æschylus lived so long that he needed to write only "four or five lines a day" is to give him a curious idea of the conditions that produced the Æschylean drama. On page 207 Mr. Lawton describes that most cruel and cynical dialogue at the opening of the "Ajax" as "Athena . . . chatting with Odysseus." In the spelling of Greek names there is no attempt at consistency. If Alkibiades and Alkestis, why Alcman and Heracles? On page 289 is quoted a verse of Milton as

"Killed with *grief the* old man eloquent,"

which is neither a verse nor Milton. A modern writer should always keep in mind the strange and sweeping deductions that have been drawn by scholars from the misquotations of Homer in Attic writers. But perhaps it is even less misleading to misquote Milton on Isocrates than to compare the latter with Edward Everett (p. 286). "Concerning the face-slapping" is a poor translation of the title of a famous speech by Demosthenes. On pages 324 and 335, "responses grows" and "his data seems" must be due to careless proofreading.

Introductory Study of Ethics. By Prof. Warner Fite. Longmans.

Professor Fite's aim has apparently been to provide a standpoint for the practical decision of moral problems rather than a complete tabulation of the academic varieties of opinion, and he has consequently attempted to represent all that is really important in ethical controversy as a conflict between the "hedonist" and the "idealist" attitude towards life. For the ordinary college student that is very possibly a more profitable way of conducting his course in ethics, though many teachers hardly realize the dangers of anything like bias or unfairness towards the views they disapprove of. Unfortunately, however, the scientific facts are too complex to permit so radical a simplification, and so Mr. Fite's antithetical types of ethical theory do not cover the whole ground. They omit, *e. g.*, all notice of the moral sceptic and the pessimist, who, even from a strictly practical point of view, would seem common and insistent enough to demand consideration. Then, again, Mr. Fite's two types (especially the hedonist) are largely puppets of his own manufacture, made by carrying the views actually held to what he considers their logical completion. The result is, as he has to admit (p. 95), that no one, not even Bentham, has ever held the whole position assigned to "the hedonist," and that all hedonists would disavow more or less essential features in Mr. Fite's portraiture. Indeed, it may be questioned whether the whole antithesis is actually tenable in any but the roughest way. Hedonism, so far from being identifiable with "the point of view of the external observer," seems to proceed rather from a form of subjectivism, while it is only in a few modern forms that idealism can be specially connected with mental activity.

Still more fanciful would it seem to be to connect hedonism with Lamarckism, and idealism with Weismannism in biology; and it is no wonder that, in attempting this feat, Mr. Fite should have fallen into the logical fallacy of converting an *A* proposition "simply," when he says (p. 235) that "the hedonistic moralist is definitely committed to the Lamarckian standpoint, and by implication the Lamarckian in biology must be a hedonist in ethics." If instead of such hazardous deductions we look at the facts, we shall find plenty of evolutionists who are not hedonists, and of "idealists" who are; and it would require far more discussion than Mr. Fite can give to it to show that they were not entitled to be so. Indeed, the combination of idealism with hedonism is easily explained, even on Mr. Fite's principles, by the existence of intellectualist idealisms which have no special affinity for moral strenuousness: but, unfortunately, Mr. Fite fails to distinguish between the intellectualist and the voluntarist types of idealism.

Other defects in a textbook of morals are the absence of a systematic discussion of the problems of freedom, of consciously irrational action (the occurrence of which is, however, implicitly denied on p. 234), and of a conception of the ethical end clear enough to justify the "assumption" (p. 326) of moral progress. On the other hand, the constant emphasis on human activity and selection in the construction of the moral order is in accord with the most promising tendency in contemporary philosophy, and worthy of a word of praise.

The Adjustment of Wages: A Study in the Coal and Iron Industries of Great Britain and America. By W. J. Ashley. Longmans, Green & Co. 1903.

The text of this bulky volume consists of eight lectures delivered by Professor Ashley at Oxford. To this many documents are added, such as the rules of conciliation boards, joint agreements, sliding scales, etc. In the view of the author, coal-mining in Great Britain has reached a later stage of industrial development than in the United States. In Great Britain wages are determined by negotiation between organized bodies of employers and employed, whereas America seems to be just struggling on to the stage of corporate negotiation. The recent disturbance in the anthracite coal trade, although not precisely adjusted by negotiations between organized bodies, was practically settled in a manner to imply a recognition of their existence. More progress in this direction appears to have been made in the bituminous coal trade, where the miners' unions have in some States made their monopoly complete.

As to the course of events in the coal industry in this country, we have been abundantly informed; but what Professor

Ashley has to say about the conditions in Great Britain has a fresher interest. In this industry, as well as in some other large industries, the workman, as an individual, has no standing. Bargains for wages are made by representatives of labor unions with employers or representatives of employers. This condition has prevailed for many years, and, in the author's view, it is likely to be permanent:

"In the modern factory, works, yard, mine, where many men are employed, whether with much or little machinery, it is administratively impossible to treat every man as an individual. . . . For the mass of the men, when many are employed, there must be general 'rates' of wages; a separate bargain with every man and a separate scale of reckoning for each are administratively impossible. But what is necessary in a single business is natural in a whole industry. . . . A common policy on the part of all the employers, the observance of the same standards or rates of wage, greatly lightens the toil of conducting business operations."

No doubt, if all the employers in a certain trade combine and all the laborers unite, the process of bargaining is much simplified. From the point of view of the contracting parties such bargaining is probably advantageous; but the point of view of the consumer is different. Professor Ashley does not see eye to eye with him. "We have so long idolized the consumer," he says, "and with such unsatisfactory results, that society may do well to try the experiment of thinking first of the producers—of all the producers." This is, of course, the essence of protectionism, except that some of the producers practically get the advantage of others in framing legislation. Protectionism has no horrors for Professor Ashley, and indeed he is so enamoured with the guild system that he would welcome the return of the *Saturnia regna* of the Middle Ages. Yet he states at the outset that trade unions cannot well be maintained in the smaller industries, and it seems difficult for them to be established in the greatest of all, agriculture. Combinations between employers and employed in coal-mining and in the manufacture of iron may thus be disadvantageous to the mass of the community, however satisfactory to the participants in these particular industries.

We cannot help thinking that Professor Ashley fails to observe that wages should be measured by their general purchasing power rather than by their money value. He seems to agree with those coal-miners who prefer no bread rather than wages reduced below a pecuniary minimum. Indeed, he thinks that the existence of a "sliding scale" tends to depress wages. The coal-owners may enter into contracts for future delivery at lower prices, expecting to be to some extent reimbursed by a reduction of wages consequent upon the lowered price. But prices in general rise and fall together. If the price of coal advances, it is generally a sign of brisk trade, which means rising prices. If it falls, it is because trade has slackened and prices are falling. Miners may be as well off, therefore, with low as with high money wages; and they, as well as consumers in general, may be much better off with steady production than if they stop it in the hope of maintaining an arbitrary price for their labor while wages elsewhere are being adjusted to the prevailing conditions. Such struggles must often tend to aggravate the depression of trade. This point, however, is not dwelt on by the author, whose chief concern is to exhibit the actual process of bargaining for wages in certain industries. Whatever may be the merits of his theories, he is careful not to obtrude them unnecessarily, and his description of the course of events in the coal-mining industry especially is admirably succinct and lucid.

BOOKS OF THE WEEK.

Abbott, Lyman. Henry Ward Beecher. Boston: Houghton, Mifflin & Co. $1.75 net.

Adams, Mary M. The Song at Midnight. Boston: Richard G. Badger. $1.50.

Adamson, Stanley L. Old Nursery Rhymes Dug Up in the Pyramids. London: Dean & Son; Boston: H. M. Caldwell Co. $1.50.

"That the discriminating ought to approve the book is unquestionable . . . written with a delicacy of style and a happiness of expression that very few essayists of to-day possess. . . . 'Carisabel' is a close observer, and she has that extremely rare faculty of observing the obvious. . . . peculiarly dainty work. . . . The moods in 'Carisabel's' book are as many as the moods of a woman, but always in comedy and pathos, there are the same tenderness and delicacy. The book is distinctly worth reading."—*N. Y. Times Saturday Review.*

THE NATURE OF MAN

Studies in Optimistic Philosophy

By ELIE METCHNIKOFF.

Translation and introduction by P. CHALMERS MITCHELL.

8vo, Illustrated. Net $2.00

"A book to be set side by side with Huxley's Essays, whose spirit it carries a step further on the long road towards its goal."—*Mail and Express.*

"An extremely interesting and typical book . . . with a distinguished frankness M. Metchnikoff defines his attitude to our universal prepossessions. It is his theory that the infirmities of age are to be overcome. If there be ground for this conception, humanity is to be profoundly changed, and what we call life now will be the childhood and youth of that longer and larger life.'—H. G. Wells in *London Speaker.*

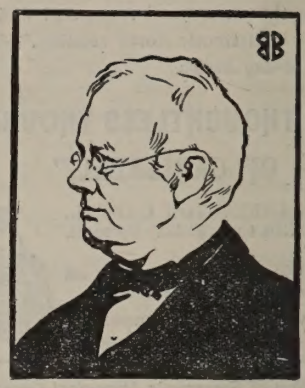
Senator HOAR'S Life Story

AUTOBIOGRAPHY OF SEVENTY YEARS



NOT only for its political importance, but for the unusual personal, social, and literary interest of the reminiscences it brings together, Senator Hoar's autobiography will be the most notable contribution of the year to memoir-literature. It would be impossible to find another man in the country who has known more of the important men and measures of his time than Mr. Hoar; and the charm and piquancy of his style, with its range from the eloquent discussion of his political principles to the humor of his anecdotes, are as remarkable as his experiences.

Two Volumes, large 8vo. $7.50 net. (Carriage extra.)

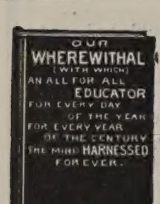
The NATION is sent free to those who advertise in it as long as advertisement continues.



TANGLED WITS

Freed from their snarls. Brainpoise, thought-power, lucidity, come from the absorption of that marvellous work on mind-control and idea culture.

WHEREWITHAL

It is bread for the brain—manna for the mind. Sets your mental house to rights; assorts and systematizes your ideas; gives you keen perception, judgment; thought-flashes come, not spasmodically, but with precision; you are a mountain of mental strength. Invaluable as an educator. Makes a *throne-room* out of university, college, or school room.

It has won the *honorary degree* of LL.D. for its author.

It solves national, state, municipal, educational, capital, and labor problems.

Mailed to any address on receipt of price, $1.00, by the publishers.

Revised Edition
Lane's Latin Grammar
FOR SCHOOLS AND COLLEGES
BY
GEORGE M. LANE, Ph.D., LL.D.
Professor Emeritus of Latin, Harvard University
Price, $1.50

Distinguished for completeness, convenience of arrangement, accuracy of detail, and precision of expression. Combines condensation with clearness in its formal expression of principles. No law of the language is neglected, no exception forgotten; ample and apt illustrations are given; yet the whole is brought within small compass. In the revision many changes and corrections have been introduced throughout, and the chapter on Sound has been very largely rewritten, and also extended.

The Creevey Papers

A Selection from the Diaries and Correspondence of Thomas Creevey (1768-1838)

SOMETIME M.P. FOR THETFORD, AND AFTERWARDS FOR APPLEBY; SECRETARY TO THE BOARD OF CONTROL, ETC., DEALING WITH ALL THE PRINCIPAL EVENTS AND CHARACTERS, SOCIAL AND POLITICAL, FROM THE CLOSE OF THE 18TH CENTURY TO 1838

FROM FAMILY PAPERS HITHERTO UNPUBLISHED

Edited by the Rt. Hon. Sir HERBERT MAXWELL, Bart., M. P.

Author of "The Life of the Duke of Wellington," etc. With Portraits. 2 Vols. 8vo, $8.00 net.

This book may be regarded as a companion to the Greville Memoirs and the Croker Papers. It will probably prove to be not inferior in interest to either of these works, and dealing with the same topics as Croker handled, but from the opposite side in politics.

The Book of Italian Travel

By H. NEVILLE MAUGHAM, 1580-1900. 8vo, flexible leather. $3.00 net.

This volume will be of the greatest interest to all who have travelled in Italy, and all who are about to do so. It is a collection of what has been said about Italy by famous travellers during the last three centuries.

Sixteen Years in Siberia

The Experiences of a Russian Revolutionist

By LEO DEUTSCH. Translated and Edited by Helen Chisholm. With portraits and other illustrations. $4.00 net.

The author relates his experiences in vivid detail, and recounts the doings of Russian revolutionists, the tragic events of prison-life both for men and women, and the drastic methods of the Russian Government in suppressing freedom of thought and speech.

The Great French Painters

And the Evolution of French Art 1830-1900

With One Hundred and Ten Illustrations. By CAMILLE MAUCLAIR, author of "The French Impressionists." 4to, $7.00 net.

Mr. Camille Mauclair has aimed at giving his English readers a clear idea of the history and tendencies of French art in the nineteenth century, of the rise of the various Schools, and of the chief work of the Great Masters of the period.

Children of the Old Masters

Italian School

By ALICE MEYNELL. Reproductions of works by the great Italian Masters of Painting and Sculpture. Quarto, $12.00 net.

In this her latest volume, Alice Meynell has aimed at explaining and showing the important place children take in the various schools of Italian art, and how child life was regarded by the people of the Renaissance. The volume is illustrated with reproductions of the most beautiful and charming pictures of children painted by the great Italian artists.

The Remarkable Account of the First Case of Successful Instruction of a Blind Deaf Mute

LAURA BRIDGMAN

Dr. Howe's famous pupil and what he taught her

The story of Dr. Samuel G. Howe's efforts to reach the shut-in mind of Laura Bridgman. By Maud Howe and Florence Howe Hall. With portraits and other illustrations by John Elliott.

Henry van Dyke, of Princeton, N. J., says: "The work of opening the gates of the prison of Laura Bridgman's soul is one of the notable things of our century."

"A book that should find a place in every educational library, and, indeed, in every home where the natural development of children is regarded as a matter of consequence."—*Boston Transcript.*

William Dean Howells says: "The wonderful work of Dr. Howe should not be forgotten in this day of Helen Keller, and her liberation with the key that unlocked the cell of Laura Bridgman."

"This unpretentious life history of Laura Bridgman is at once a text-book and an inspiration, a record of a novel and profoundly interesting system of instruction and an alluring revelation of a heretofore undiscovered realm of philanthropy."—*Philadelphia North American.*

Crown 8vo. 400 pages. **$1.50 *net.* (Postpaid $1.63.)**

Laura E. Richards' Important New Book

THE GOLDEN WINDOWS

An exquisite book of Fables for Old and Young, by Laura E. Richards, author of "Captain January," etc.

"Forty-four fables, simply written and exquisitely conceived, with a little golden moral attached to each."—*Boston Herald.*

"Will be read with interest by the oldest members of the household, as well as the children."—*St. Louis Globe-Democrat.*

Handsomely illustrated and decorated by Arthur E. Becher and Julia Ward Richards. 12mo, $1.50.

"One of the Sweetest Stories ever Written."

THE AWAKENING OF THE DUCHESS

Frances Charles, author of "In the Country God Forgot," writes in an entirely new vein in this her latest and best story.

"A charming, tender short story of the awakening of a young mother to her true self through the ministrations of her half-forgotten child. Told so simply that a child can understand it, but there is in it a thread of beauty and power which holds the attention of the adult reader."—*Washington Star.*

With four delicately colored illustrations by I. H. Caliga. Handsomely bound. 12mo, $1.50.

"A Book of rare fascination, describing picturesque Indian tribes."

Indians of the Painted Desert Region

Authoritative and entertaining first-hand information by George Wharton James, the author of "In and Around the Grand Canyon." With 66 illustrations from unusual photographs. Crown 8vo. $2.00 *net.* (Postpaid, $2.16.)

E. Phillips Oppenheim's Best Novel.

A PRINCE OF SINNERS

A wholesome and engrossing story of English social and political life. Illustrated, $1.50. Fourth Edition.

A logical Sequence of "The World Beautiful."

THE LIFE RADIANT

In which Lilian Whiting, author of "The World Beautiful," etc., aims to portray a practical ideal for daily living. 16mo. $1.00 *net.* Decorated $1.25 *net.* Postage 10 cents.

Dr. Hale's collection of ballads.

NEW ENGLAND HISTORY IN BALLADS

Written during the past twenty years by Edward Everett Hale and others. Illustrated. Small 8vo. $2.00 *net.* Postage additional.

A Classic by Jefferies.

AN ENGLISH VILLAGE

A new edition of Richard Jefferies' "Wild Life in a Southern County," with 25 full-page pictures by Clifton Johnson, and an Introduction by Hamilton W. Mabie. 12mo, $2.00.

DANIEL WEBSTER FOR YOUNG AMERICANS

Webster's greatest speeches carefully selected and arranged; with introductions and notes by Prof. Charles F. Richardson, of Dartmouth College, and an Essay on Webster as a Master of English Style by Edwin P. Whipple. With over 50 illustrations. Crown 8vo. 452 pages. $1.50.

PIONEER SPANIARDS IN NORTH AMERICA

Stirring stories of Spanish exploration and conquest in the period immediately succeeding the discovery of America. By William Henry Johnson, author of "The World's Discoveries," etc. With numerous illustrations. 12mo. 400 pages. $1.20 *net.* (Postpaid, $1.38.)

New Illustrated Juveniles

THE GIANT'S RUBY

And Other Fairy Tales. By Mabel Fuller Blodgett. Original, imaginative, amusing tales. Cleverly illustrated by Katharine Pyle. 12mo, $1.25 *net.* (Postpaid, $1.39.)

BRENDA'S BARGAIN

The last of the "Brenda" Books for older girls, by Helen Leah Reed, author of "Brenda's Cousin at Radcliffe," etc. Illustrated. 12mo, $1.20 *net.* (Postpaid, $1.32.)

URSULA'S FRESHMAN

A new story in the popular "Teddy" series, by Anna Chapin Ray, describing the experiences of an aggressive Iowa girl who went to live in New York. Illustrated. 12mo. $1.20 *net.* ($1.32, postpaid.)

ROBIN HOOD: HIS BOOK

Legends of the merry men of the Sherwood Forest, delightfully retold by Eva March Tappan. Illustrated in color by Charlotte Harding. 12mo. $1.50 *net.* (Postpaid, $1.64.)

A DAUGHTER OF THE RICH

Adventures of a wealthy New York girl who went to live in a happy Vermont family are told "with genuine Louisa M. Alcott sympathy" by M. E. Waller, author of "The Little Citizen." Illustrated. 12mo. $1.50, postpaid.

JANE AND JOHN

Their Plays, Parties and Picnics

By Elizabeth Polhemus. About very human children. Finely illustrated in color. 12mo. $1.50 *net.* (Postpaid, $1.64.)

☞ *Send for Illustrated Catalogue describing these and other new books.*

LITTLE, BROWN & CO., Publishers, Boston, Mass.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 26, 1903.

The Week.

The time-worn question, "What constitutes a State?" is much in order in the case of the bantling Republic of Panama. It has a self-appointed triumvirate, and an incipient diplomatic service named by three consuls. It has no discoverable Constitution, no legislature; and what its judiciary is, let who knows answer. Clearly, some of the usual appurtenances of a State are lacking. Apparently there are more diplomats than soldiers or judges; and this suggests the thought that when M. Bunau-Varilla tells the Czar of "the end which the obvious intentions of Providence have assigned" to the State of Panama, he means the capacity to make treaties. Evidently, the Republic of Panama has no other reason for being; and if it be a sufficient entity for treaty-making purposes, it could only superfluously burden itself with the minor accessories of nationality. In any case, it seems in no haste to do so. To the pundits in international law we must refer the unique case of a nation which is a bare treaty-making power, and a Government that is merely a foreign-office.

Oh "republican form of government," what side-splitting jokes are committed in thy name! The Panama "commissioners to negotiate a treaty" are confronted, on their arrival in Washington, with a treaty already signed. The whole thing was done between luncheon and dinner. At one o'clock the Secretary of State had not got beyond the preliminary question whether there was need of a new treaty at all; by six, everything was signed, sealed, and delivered, amid "hearty congratulations." The commission to negotiate is now to be transformed into a commission to ratify. Why not? The only real credentials of the commissioners are, like those of Cardinal Ximenes, nothing but artillery—the guns, in this instance, being on our warships. There is surely no need of waiting for Panama to frame a Constitution and form a government. A Panama Senate might conceivably object to a treaty alienating the sovereignty of a strip of land ten to twenty miles wide right across the republic. So it was cleverer to have the treaty "ratified" before there was any Panama Senate. As for waiting for the Panama commissioners, it was obviously much easier to deal with one man than three, and he, being a Frenchman, would, plainly, have a facility greater than any native's in giving away their territory. Indeed, our State Department never displayed greater resources. There was an awkward hitch, for a moment, over the seal of the Republic of Panama, which it was necessary to affix to the treaty. There was no seal, any more than there was a republic. But a clerk came gravely forward with "an improvised seal" which he had thoughtfully provided. Improvised republic, improvised seal. What could be neater?

It is not surprising that Wall Street should have begun to discuss with a good deal of interest the manner in which the "Panama payment" will be made, and the effect of such payment on the markets. As matters stand, our Government is bound to pay, on the ratification of the treaty, $40,000,000 to the French shareholders in the Panama enterprise, and $10,000,000 more to the Isthmian State conceding the canal. On the face of things, this would appear to mean the "laying down," on a given date, of $50,000,000 at Paris and Colon. If shipment of such a sum were to be made in actual cash, a question of very great interest would arise, as to whether the cash sent out of the country would be obtained from the Treasury vaults or from the money market. It might be drawn from either, for, in addition to the $144,000,000 actual cash in the Treasury's own hands, the Government has $159,000,000 on deposit in banks and subject to demand. If only the idle cash in the Treasury vaults were used for the Panama remittance, no disturbance would occur in the money market. If, on the other hand, the banks were required to send $50,000,000 gold abroad, the money market would naturally be much upset.

But the situation is not as simple as this description might seem to indicate. The Treasury, it is true, has $144,000,000 actual cash on hand. But of that sum, upwards of $10,000,000 is in the form of uncoined silver and fractional coin, while the balance is held against $100,000,000 demand liabilities of the Government, in the nature of outstanding checks, disbursing officers' credits, national bank redemption fund, etc. It may be doubted whether the Treasury could with propriety draw as much as $50,000,000 out of this working fund. What it probably will do, is what it did when the $20,000,000 Philippine indemnity had to be paid to Spain in 1899. It drew almost equally on the Treasury's cash reserve and its bank deposits. The proceeds were invested in London drafts, to mature in sixty days. These drafts were remitted to the Spanish Government's agents, who could have held them until maturity, or turned them at once into cash at the European discount houses. If this country's accruing foreign credits, at the moment, had been large enough, the $20,000,000 charge might have been met, when the drafts fell due, by shipments of wheat or cotton or securities. As the matter actually fell out, however, the New York market, when the bills matured, sent to Europe almost exactly $20,000,000 gold.

A fine moral crescendo appears in the reasons which the State Department is reported to have given for being against the annexation of San Domingo. In the first place, annexation has not been offered; second, we should be unwilling to annex a country of which the majority of the inhabitants are against it (please don't utter the word Philippines—that has nothing to do with the case); third, San Domingo has nothing that we want. True, we used to want Samana Bay consumedly; but our war vessels draw so much more water than they did in the seventies that the harbor would now be of little use to us. Not really needing San Domingo, therefore, law and morals forbid our seizing it. If, however, it should in the future appear vitally necessary to give employment to some American dredging company with powerful political connections, we might discover that Samana Bay "commanded" or "frowned" upon something, and we should have to take it and let a contract.

An appropriation of money by Congress is to be asked for to prolong the existence of the Commission on International Exchange. The reasons for it ought to be found in the Commission's report of its recent labors in Europe. We there learn that our envoys gained the ready assent of the Powers to the proposition that it would be a wise thing for China to adopt a monetary system "based upon what is commonly called the gold-exchange standard." This phrase, being new to economic science, is defined in the report as "similar to the plan recently adopted by the Congress of the United States for the Philippines." If the plan referred to is carried out without mistake or peradventure, it is the gold standard pure and simple, since it provides that the Philippine Government shall redeem its silver pesos in gold on demand of the holder, at the rate of fifty cents gold for each peso. The approval of the European governments was easily gained for the extension of the gold standard to other silver-using countries on the same terms. So they bade our commissioners godspeed, who thereupon came home and reported that their work had been entirely successful. They were able to give China the joyful news that no Eu-

ropean country would put any obstacle in the way of her adoption of the gold standard.

Now the question arises whether this missionary enterprise ought to be prosecuted any farther at public expense. Other American missionaries in China are supported by private contributions, and it would be difficult to assign a reason why Congress should make an appropriation for the C. I. E. and not for the A. B. C. F. M. The Commission on International Exchange sets forth at great length the difficulties of accomplishing the monetary reform contemplated for China. Yet it thinks that the plan would work well "provided proper business judgment be employed"—*i. e.*, by the Empress Dowager and her subordinates in Peking. No compensating advantages to the United States are pointed out as likely to arise from this missionary expedition, except a probable increase of trade resulting from a better monetary system in China. As this would be shared by other countries, it would seem fitting that they should share also in the expenses of the expedition. If asked to do so, they would perhaps reply that they have their own diplomatic channels of communication, which enable them to make any suitable representations to the Chinese Government in a more regular way and without extra cost. So have we, and why should not our embassy be used to that end if it be a desirable one?

If any other man than Mr. McCall had said what he is reported as declaring on Thursday in the House, he would have to pay a severe penalty. His independent course as a Republican in the past has given him a prescriptive right to say and do about what he pleases; but there is a limit to everything. Certainly, from a party point of view, it was most improper for him to stand up in Congress and state that the effect of the Cuban treaty would not be materially to reduce the price of sugar in this country, and that consequently the Cuban planter would get the benefit. That may be his opinion, and it may be a very sound one, too. But it is not the one with which the Sugar Trust has favored the people of this country in the past. It told us that a reduction in the duty on raw sugar (the differential on the refined being retained, of course) would cheapen the price of the finished product to domestic consumers. It was pretty hard for some of us to believe that the Trust was going to share the profit from the decreased duty with its customers, and now Mr. McCall rises up and tells us that it will cost us as much to sweeten our coffee as before. His view is, of course, the common sense one. The Cuban planter will benefit by reciprocity, and so will the Sugar Trust, as long as it retains the differential of which we have advocated the removal. The House did vote to remove it last year, and then the Sugar Trust lost interest in the treaty. Now it is getting its own again.

Mr. John Sharp Williams of Mississippi, the Democratic leader in the House, in the able speech in which he closed the debate on the Cuban bill argued convincingly that the prosperity of this country is not due to the Republican tariff policy. He showed that the country would in the long run be prosperous, no matter what tariff policy was adopted, although, as he believed, the fewer the restrictions upon trade the greater would be the prosperity. He pointed out what were the causes that insured prosperity here, saying, among other things, that the United States "will continue to be prosperous because we are the one people on the globe, except some of our British cousins in the colonies, where there is absolutely no caste, where a man knows that although he is working to-day pegging shoes, he may the next year be Governor, or something of that sort. Men work with hope and with incentive, and will continue to do it." Can Mississippi, from which the eloquent gentleman comes, be as prosperous as it might otherwise be if 900,000 of its people, constituting nearly 60 per cent. of its population, cannot "work with hope" in the sense in which Mr. Williams uses the phrase, simply because they are colored?

Speaker Cannon has had the unhappy experience of seeming more strenuous than the President. In the conference on the Cuban reciprocity bill, Mr. Cannon roundly characterized the postponement of the Senate vote as unfair treatment of the President; and, in fact, no better reason has been alleged for deferring the bill except that the Senate wishes to "put the President in a hole," by showing that the extra session was superfluous. The President, however, realizing the possibilities of obstruction in the Senate, took his "rebuke" lying down and assented to the delay. His surrender is unfortunate, for his case was a good and a clear one. Had the Senate proved obdurate, it would have been clearly in the wrong, and it would have added to that accumulating unpopularity from which alone reform of its antiquated procedure will come. In this case delay by the Senate is a kind of perfidy. That issue should have been fairly made. Having ratified the Cuban treaty, the Senate was, though not legally, yet in honor, bound to pass the enabling act promptly and as a noncontentious measure. To pass the treaty and then boggle over the legislation necessary to make it effective, is a bit of child's play. The case shows plainly how little public considerations weigh against the personal prejudices and small manœuvring of the Upper House. Speaker Cannon deserves everybody's thanks for being more zealous than the President in the President's fight.

Fear that New York State will go Democratic in the next election is written on the countenance of every Republican politician. The victory of McClellan in Manhattan and Brooklyn, in spite of many Democratic votes against him, indicates that when the full party strength is enlisted, New York city may easily roll up a majority of 100,000 for a conservative Democratic candidate. To overcome such odds, the Republican leaders will have the struggle of their lives, for Odell carried the State for Governor by less than 9,000. These facts alone are enough to account for the eager buzzings in the corridors of the Fifth Avenue Hotel, and the anxious look on every face in the Amen Corner. But, to add to the excitement, the relations between Platt and Odell are apparently more strained than ever. The Senator wants to retain his old sway over the organization; and the Governor has long since discovered that a man cannot retain his self-respect in office and at the same time do the bidding of Platt. The Governor, then, has cut out for him the task of holding Platt in check and keeping the State in line. Walking the tightrope is, in comparison, an easy amusement. The performance will be watched with sympathetic interest by political equilibrists all over the country. The Platt organs have been expressing their sincere compassion for Mr. Odell, and their fear that such a mere tyro will speedily be put out of the game. It is possible that this is the interpretation to be put on the conciliation meeting at the White House, from which both emerged with smiling faces for the reporters.

Prof. John Spencer Bassett of Trinity College is said to have tendered his resignation because of the criticisms evoked by his recent article in the *South Atlantic Quarterly*, of which he is editor, entitled "Stirring up the Fires of Race Antipathy." From the Northern point of view it was a fair and forcible appeal for justice for the negro. From the Southern standpoint it was revolutionary, not only because it leaned towards race equality (that is, equality of opportunity), but also because Professor Bassett declared that Booker T. Washington was the greatest man the South has produced in a hundred years, with the exception of Robert E. Lee. This opinion has aroused a perfect storm of indignation and resentment, particularly in the sanctums of such rabid anti-negro newspapers as the Raleigh *News and Observer*. Ministers have threatened to withhold their sup-

port from the college and parents to remove their sons. Hence Professor Bassett, doubtless out of consideration for the interests of Trinity College, has offered his resignation to the trustees. Two years ago, it will be remembered, the trustees of Emory College in Georgia turned away Mr. Andrew Sledd, their professor of English, for daring to express unconventional views (for a Southerner) upon the race problem, in the *Atlantic Monthly*. This action was universally condemned throughout the college world and by the best representatives of the American press. But Southern Bourbonism learns nothing and forgets nothing.

Some time ago we called attention to the Ohio statute that makes any county in which a lynching occurs liable for damages to the estate of the victim. It was thought by some that there would be few actions under this law, not only because lynchings in Ohio are rare, but also because the victims are generally outcasts. But the "heirs, administrators, and assigns" of one Charles W. Mitchell, who was lynched in Urbana in June, 1897, have just obtained a verdict of $5,000 against Champaign County, after a prolonged legal fight. Naturally, the taxpayers of the county are not all pleased by this judgment, and are paying for the misdeeds of the Urbana rioters with extremely wry faces. It is safe to say that they will look with very little leniency upon similar pleasures of the mob in the future. The *Illinois State Journal* thinks this Ohio idea a very good one, and hopes that it will widely spread. In view of the lynchings at Belleville and elsewhere in Illinois, that State ought to be one of the first to follow Ohio's lead. The *State Journal*, however, calls attention to the South's need of such legislation, with the flippant remark that "it would doubtless be opposed there on the ground that it would deprive the people of a source of innocent amusement."

Senator Hanna naturally had a sympathetic audience as he preached ship subsidy to the Marine Architects and Naval Engineers last Friday. His contribution to a well-worn theme was not strikingly original, but he dropped at least two hints of interest: first, the recent Ohio election was won largely on the ship-subsidy issue; second, any campaign of education for a subventioned auxiliary navy must "begin in the House." Senator Hanna went about during the campaign against Tom Johnson telling the farmers of Ohio that, should we be caught again in a war, without an auxiliary navy, their grain "would rot in their granaries." This was very literally talking rot to them. For the post-prandial hour, vague generalities about "the flag on every sea" and the "third line of defence" do very well. But if ever the campaign of education which Senator Hanna so ardently desires is to begin, it must be conducted on a basis of facts and figures. If the navy needs auxiliary ships and crews, let us have an estimate, not from a dealer in shipbuilding materials, but from a naval board. In that way we shall learn how many ships are wanted, and what it is worth to retain them. We may also hear some plain truth as to the relative value and expense of subsidized liners as compared with cruisers. Certainly, the recent revelations in consolidation of ocean lines and the financing of shipbuilding and iron-making plants are not calculated to win that measure of public enthusiasm which Senator Hanna predicts for a moribund project.

Senator Hanna continues to renounce his Presidential ambitions in the positive manner of the small boy who protested: "Mother told me I must not take a second piece of cake unless you urged me very hard." To an enthusiastic admirer in Fort Scott, Kan., Mr. Hanna writes that the result of the Ohio election is gratifying as a "personal vindication," but really it does not "justify the claims of my friends with reference to the suggestions of my nomination for the Presidency." He must therefore ask his friends not to place him in an "embarrassing position." The failure of these friends to consider his tender sensibilities is one of the marvels of recent politics. Only a fortnight or so ago, dispatches from Birmingham announced that quantities of Hanna boom "literature" were being received and distributed by the Lily White Republicans. Of course, Mr. Hanna declared that some Machiavellian enemy of his had been at work. We shudder to think of Mr. Hanna's wrath should a large number of Southern delegates come to the convention ready to do or die for him. He would be absolutely at the mercy of these devoted followers unless he could persuade President Roosevelt to toss them a few offices in order to still their clamor. Painful as such a step might be, Mr. Hanna has, we trust, the courage to face the emergency. In the meantime he might learn by heart the words which another man uttered when he was talked of for the Presidency. Gen. Sherman used no soft phrases about "embarrassment," but said flatly that he would not take the nomination if it were offered, and would not serve if he were elected.

The decline of 3,500,000 tons this year in the shipments of iron ore from the Lake Superior region will not create surprise. History has been made very fast in the iron and steel industry in the last month or two, and what was considered for practically the first three-quarters of 1903 as, on the whole, a desirable state of affairs, has suddenly taken on an opposite appearance. Down to a comparatively recent date the iron and steel brokers, and others to whom the public looks for authoritative views regarding the industry, represented conditions as in every way healthy. But when the Steel Trust dividend was cut early in October, and it was stated that the concern's orders were some 22 per cent. below those of a year previous, the fact could no longer be concealed that something more than a "moderate reaction" was in process. The real trend was known, of course, months before the public was let into the secret. Such facts as the great building strikes and the increasing difficulty of placing railroad loans were not lost on the iron and steel manufacturers. The fact that their deliveries on old contracts continued heavy, blinded the public pretty effectually, but not the trade. The point was not reached until recently, when the mills had so far caught up on their orders that, for want of new contracts, they were obliged to close down part of their plants. That is probably why even a larger decrease than 3,500,000 tons of ore has not been witnessed this year.

No very tangible results are likely to follow the exchange of cordialities between the Italian and the English Kings, but the bond between Italy and England is so real that it needs no expression in formal treaties. Italy is the only country in Europe where the English are not only tolerated, but liked. Their habit of villa residence has resulted in many friendships and intermarriages between the aristocracy of the two nations. Finally, England offered asylum to the refugees of the war of liberation, and gave counsel, encouragement, and the songs of her poets to that great uprising. An international understanding rarely has so solid a basis. Very naturally, then, the ceremonies and speeches, being matters of course, lack some of the enthusiasm and rhetoric that have characterized more flimsy demonstrations of international friendship. Looking to the future, the activity of King Victor Emmanuel in cultivating relations with France and England—and even his unlucky overtures to the Czar—show that Italy is gradually depending less on the Triple Alliance. So much may be gathered from an interview with the new Foreign Secretary. Commending, as in duty bound, the old alliance, he said that on the Balkan question Italy and England were in perfect accord. That means that Italy looks askance at the preponderancy of Russia and Austria in the Levant. But more important than such immediate possibilities is the public assertion of common interest between the two kingdoms. On occasion this sentiment could be converted into a treaty for joint action in the Mediterranean.

THE APPEAL TO CONSCIENCE.

Colombia's appeal to the American people, issued on Saturday, is a document at once dignified and pathetic. It is the voice of a weak people asking considerate treatment by a nation of resistless power. Admitting that we have a giant's strength, Colombia implores us not to use it to her wrong and undoing. As if cherishing the belief that the events of the past few weeks have all been a hideous mistake, the rash and overbearing act of men for a little time in authority at Washington, the Colombians go straight to "the national conscience of the United States," in which there resides, as they fully recognize, a power more dread than army or navy, or the arrogance of temporary rulers.

Now, whatever success or failure may attend this appeal, it is a peculiarly awkward one for the Administration to deal with. Bluster or threats it could have smiled at—would have welcomed eagerly: virtuous indignation is easily aroused against those whom we have wronged. A war to prevent Colombia from recovering property which we had filched from her, might even have been popular. But for a moral and Christian Government to be approached with reasonings about right and justice; for an Administration which has loftily lectured Russia on the necessity of keeping faith, and has stood aghast at England's oppression of the weak, to have its own doctrines turned upon it with a *de te fabula*—that is the particularly hard thing for a churchgoing President to have to face. What shall it profit him to gain a canal and lose his self-respect?

Mr. Roosevelt ought not to be the man to be deluded or satisfied by the applause of the unthinking. Any President striking an heroic pose in the presence of a foreign nation can evoke the shouts of the vulgar. Mr. Cleveland did it in 1895. From being the best hated and most isolated President in Washington, he passed in an hour to floods of praise and congratulation—all because he had appealed to the baser instincts of the people. So to-day President Roosevelt is winning the approval of every dear old lady who says that we "ought to have taken the canal long ago"; of every muddle-headed man who argues, "Well, you see, under the Monroe Doctrine, we can't let those revolutions go on," or who reasons, "Under the treaty, you know, we just had to recognize Panama the moment she said she was independent." And, of course, every American who believes in bullying, or loves a row, or thinks that his country is never great unless cheating somebody, or has the mere "loveless lust of territory," is hurrahing for a President who was "too quick on the trigger for the d—d Dagoes." But what can all this mean to an educated man in the White House, who knows the difference between the groundlings of the purchased press and the judicious of—let us say—his own Harvard?

Some good people, still believing in the sanctions of the moral law, and mindful of what the prophets and poets have said of the sure punishment of national injustice, are looking about as for some supernatural intervention to prevent the completion of our outrage of a weak and friendly nation. They even say that a just God cannot permit the fruition of such a wrong. But history laughs—or weeps—that down. Not directly or immediately is the penalty for national aggression visited upon the aggressor. It comes in subtle ways, delayed often, but none the less sure. In our own case, it is probable, one form of punishment will be a deterioration in the Presidency. This may not come in Roosevelt's day. But his example will live and work mischief after him. Some weak and little scrupulous man, carried into the White House by political accident, may hereafter find himself in great difficulties at home, and, thinking of Roosevelt's success in firing the crowd by reckless conduct in foreign relations, may seek to imitate him, and plunge the nation into untold miseries. This is an aspect of the Presidential office often overlooked. Each President is bound to strive to maintain its traditions. Its reputation for deliberate and lawful action; its constant eye to the country's dignity, and not the passion of the hour; its willingness to err, if at all, on the side of justice rather than on that of oppression—all this is as an accumulated treasure which every President is under obligation to guard and swell. But Mr. Roosevelt, in the Panama proceeding, has done his best to squander it.

Whatever may be done with Colombia's moral arguments, two points in her legal statement demand the immediate attention of the Administration and of Congress. One is that she stands ready to "concede through pacific and equitable ways" all that the United States is attempting to obtain by force. That is to say, all the shrill outcry about the "robber politicians" of Colombia, and the rejected canal treaty being an end of friendship, falls to the ground. Colombia will give us a satisfactory treaty if we ask for it in the usual way. Furthermore, says the Colombian Foreign Minister, the first threats came from our side. Colombia, he states, was notified by the United States that, if the treaty were not ratified without change, we should "take painful measures." Where is that dispatch of Secretary Hay's? Who authorized him to assume such a minatory attitude? Why was not this critical dispatch sent to Congress, in answer to its request for the correspondence? These questions require instant answer by the State Department. Failing it, Congress should again make itself heard in a matter so nearly affecting the national honor.

THE ISTHMUS HOLDING COMPANY, LIMITED.

In seeking an apology for the recent Isthmian negotiations, we have found it in their striking similarity to certain established methods of finance. It has come to be axiomatic, for example, that when several warring companies cannot control each its own affairs, they may collectively be controlled and recognized by simply putting them all in the hands of a holding company. The operations of such holding company, naturally, must be underwritten by some responsible party. But, curiously enough, these holding companies have only a qualified existence. It has been questioned even whether they are entities in a strict legal sense. No one denies, however, that they exist so far as holding the disputed interests is concerned and for all purposes of voting the stock—a service usually rendered by self-appointed "voting directors."

The greatest of all these holding companies is beyond question the new Republic of Panama. Recall the circumstances of its organization. The conflicting interests were the national rights of Colombia, the French Panama franchise, the claims of the United States, and the unfinished canal itself—all hopelessly disjoined. The need of a holding company for these unmanageable concerns was urgent, and the Republic of Panama emerged. Holding the canal already, it assumed the rights of Colombia, and asked France and the United States to surrender their stock in exchange for certificates of benevolent intentions. To whom redounds the credit for transferring this familiar financial device to the sphere of world politics it would be premature to say. Clearly, Colombia had nothing to do with it; the scheme transcends the intelligence of the Panama consulate. Let history distribute the glory between the French Panama Company and our own State Department.

Whoever did it was quite as much an inventor as an adapter, for the Panama Holding Company differed from the financial sort in being absolutely self-constituted. There was no tedious demand for the deposit of stock or other authorization—or, if such there were, the thing was done covertly and without delay. A consolidation that requires neither persuasion nor the consent of the consolidated may well make Mr. Morgan look to his laurels. A further advantage lay in the Panama consolidation: whereas financial holding companies are made big and powerful so that they may be beyond the possibility of dangerous attack, the Panama Trust was made so small that its underwriter could hold it in the hollow of his hand.

If the French Company may have seemed to deserve credit so far, there is no slightest doubt that any further thanks are due to the swift executive ac-

tion of President Roosevelt. That transfer of a great steel plant to a bankrupt shipbuilding concern which was consummated between cocktails was not underwritten with greater celerity and certainty. The historic moment at which the infant republic found itself irrevocably underwritten by the United States may be pictured to the imagination as follows:

President Roosevelt, having happily learned in some mysterious way that the promoters of the holding company were lurking in the back alleys of Panama, telegraphs to Consul Ehrmann:

"Is there by any chance a holding company with you? If so, tell them they are underwritten by us."

From Consul Ehrmann ticks back the response:

"Not yet. You have forgotten the difference of time. The holding company will organize in two hours. Will underwrite it."

For two hours the instrument was silent, and then the dispatch flew from Panama: "There now happens to be a holding company"; and from Washington the emphatic reply: "Underwrite it immediately." So a new chapter of history opened.

At this point the fine Italian hand of Secretary Hay intervenes, applying the principle of limited responsibility to the newest planet to appear in the international heavens. Holding companies have hitherto voted through their trustees. That complicates matters even for the banking houses which have chosen the trustees. How much more available, thought Secretary Hay, a company which should merely hold, while we, the underwriters, do the voting! That principle—"vote first, then discuss"—was established, it will be recalled, at the stockholders' meeting of a local traction company. The astute combination of the two principles in a case in statecraft is Mr. Hay's most original contribution to international polity. Malicious critics may be inclined to cite the case of the dummy directors of the Shipbuilding Trust, but the analogy is superficial. The dummy directors held nothing whatever, but they did vote. The Isthmus Holding Company, Limited, has actually held the canal for a matter of a fortnight, but it will not be allowed to vote at all; unless, indeed, Minister Varilla's compliance in the presence of Secretary Hay's stern eye and a new pen may be interpreted as the casting of a single ballot in behalf of the Panama Republic.

We present this remarkable instance of the combination of all the approved Wall Street methods not by way of defence. The affair needs none. From passers of the "flimsy" to Trust organizers there is only one voice. "It is the slickest yet," is the universal comment. But we do wish to impress upon those who have organized previous holding companies a sense of their paltering and half-hearted methods. When Wall Street sees a holding company that does not require the assent of those whose property it takes in charge, and that cannot vote, then indeed it may proclaim the promised time when musty old precedents shall have been relegated to the junk heap. It will pay the Trusts to study President Roosevelt's recent flotation. When they kiss the hand that smote them, they will be recognizing not only their master, but their most resourceful exemplar.

FROM GROTIUS TO GROSVENOR.

Who can maintain that Grotius contributed more to the science of international law than our own Professor Grosvenor? The great Dutchman had an enormous command of facts, and certain dregs of conscience; but he represents an exploded theory. He made the mistake of confounding law and justice. He lived long before the days of that American community which, after profound meditation on the proper inscription to be placed over the portal of a new court house, decided on *lex* instead of *justitia*. Moreover, Grotius, with all his vast learning, was weak linguistically. It is fine to write elegant Latin, but far better to use the vernacular with subtlety. That is where our Amherst professor stands head and shoulders above Grotius. He knows how to fit the euphemistic word to the ugly act. Nearly three centuries have elapsed since Grotius wrote 'De Jure Belli et Pacis,' but Professor Grosvenor is quite right in saying, on his own principles, that "international law is still in its infancy."

The capstone will be put on the science of international law when means have been discovered for a "court of last resort." Then the ideal of the great statesmen—"the comity of nations"—will be attained. Heretofore, that end has seemed, like the Golden Rule, a dream. It has been in the domain of international politics what "competition" was in the economic field until our captains of industry and our barons of finance took the matter in hand. This is a revolutionary age, and nothing so much attests the greatness of Professor Grosvenor as the fact that he has kept abreast of it. Amherst surpasses Leyden at one definition—"the right of eminent domain among States." There you have the easy solution of the greatest problem that has vexed the minds of publicists since Aristotle. The "court of last resort" has finally become a possibility.

It took a powerful mind to think out the doctrine that competition could be eliminated by "capitalizing the future." But it was an even higher wisdom which discerned that the true "comity of nations" can be attained if every nation will constitute itself a court of last resort. To be sure, in the first instance the discovery really meant overcapitalization, just as in the second it truly means the arbitrament of arms. But that is where the euphemism comes in. In the case of our capitalizing the future, it made possible and dignified the distribution of some hundreds of millions of worthless securities among innocent and deluded investors. In the case of "the right of eminent domain among States," it makes the worse appear the better part in a flagrant and vulgar act of international bullying. Of course, it is not to be expected that the new law of "eminent domain" among States should be perfectly applied at the start. It takes time to reduce great discoveries to practice. But all that will come. The great thing is to maintain the unities. There should be no announcement of revolutions two hours before they actually occur; but a mere inadvertence of that sort cannot vitiate a great law. As well might you belittle the science of gunnery because your young artilleryman fails to make sufficient allowance for "windage," as to cast ridicule on "eminent domain" because our State Department forgot there is such a thing as longitude.

The virtue of a principle lies in its application; and it is safe to say that no principle admits of wider and more successful application than this new one. The universality of Gresham's law is bound to seem a very limited affair beside the universality of Grosvenor's law. Every foreign office will welcome its discovery, because of its labor-saving quality. From Xerxes's invasion of Greece to Roberts's invasion of the Transvaal, the rulers of mankind have racked their brains to frame pretexts for aggression. No more will this be necessary. Henceforth they will only have to plead "the right of eminent domain." What would not Louis XIV. have given for that term when he was striving to determine "the natural frontier" of France? Even Dr. Jameson could be rehabilitated if it could be proved beyond peradventure that he was consciously invading the Transvaal in behalf of the right of eminent domain.

And only think of the future when "Destiny" and "Eminent Domain" shall go hand in hand. One need not attend a school of the prophets to foresee what will happen. Some day the "interests of mankind" will demand the absorption of Holland by Germany. Can Holland object, any more than a man whose land has been condemned in the interest of a railroad corporation? What a tremendous use Russia can make of Professor Grosvenor's law! She is more in the clutch of "Destiny" than any nation on earth. Not only does she kill off her Jewish subjects in accordance with this great law, but she comes pretty near to treading on our own toes in Mantchuria. Think, too, what rights under "eminent domain" she is entitled to

in China proper. Shall that country of wonderful natural resources be allowed to withhold them much longer from the use of suffering mankind? Not if Amherst College can prevent it. Professor Grosvenor has provided the true salve for the lacerated feelings of Finn and Macedonian. But why multiply instances? There are gods many and lords many, but we have added one more to our Pantheon—the god Nomenclature. Great is Nomenclature, and Grosvenor is its prophet.

CHATTER ABOUT FOREIGN TRADE.

Secretary Shaw was as delightful as ever in his speech about foreign trade, at the Chamber of Commerce dinner last week. No man excels him in taking for granted premises which are in dispute, and reasoning from them with brilliant inconsequence. It was said of Burke that he discussed national finance and trade with the zeal of a man talking all the while about his private affairs. Mr. Shaw brings to the men actually engaged in the great commerce advice as of a small banker in Iowa, announcing his firm belief that there is such a thing as foreign trade (since he has just discovered it), and asserting that we ought to have all there is going, but displaying no real conception of what exchange of goods with other nations really is, or how it is brought about. It was as if to characterize such talk as the Secretary's, leading nowhere, that Mr. J. J. Hill said on the same day, with expert authority: "We are not in the ocean trade, and we won't [shan't] be in that trade until we get people who realize what it means."

One good instance of Mr. Shaw's *insouciant* mixing up of things was his Jingo declaration that the Government was not going to "waste time in carrying out this canal project," coupled immediately with his statement: "We must have the trade with the countries to the south of us." Now, what has been the first and inevitable trade effect of our high-handed course on the Isthmus? Undoubtedly, to give us a considerable setback. Only week before last an ardent patriot was discoursing to a business man on the glorious Yankee smartness with which the Government had got the better of Colombia. "Well," said the other ruefully, "all I know is that it has killed my business." He was in the Colombian trade, and all orders had, of course, been cancelled. Nor is this by itself any joke to a country imperatively requiring, as Secretary Shaw says, an "outlet for our trade." Colombia has been, for example, our best customer in all South America in the matter of cotton manufactures. For the nine months ending in September, she took of us 15,376,677 yards—twice as much as Brazil, seven times as much, we may add, as the Philippines. It is, surely, a fine stroke of business to cut off a market like that, with the cotton manufacture depressed as it is to-day!

One might not think, from the all too fresh mind which Secretary Shaw brings to the problem of South American trade, that a great body of official and economic evidence on that subject had been laboriously gathered. Our consuls have for many years been dinning into the ears of the exporters of the United States the homely truths to which heed must be given if trade is to be won in South America. They have shown how, first of all, England and France and Germany held the advantage of position. First to cultivate the field, their representatives on excellent terms personally and socially with the South Americans, to whom the agents of the United States have been notoriously antipathetic; carefully studying the needs of the market and studiously catering to them—in other words, applying intelligence and persistency to the business—these countries had far outstripped the United States. Our protection policy not only had made us home-keeping, but had given us homely wits. The Consular Reports have been filled with the ineptitude, the stupidity, the casual and easily relaxed efforts of our exporters to get a foothold in South America. They had talked heroically and resolved enthusiastically about South American trade, but had gone about getting it in a dunderhead fashion. Naturally they had got but a little.

It is a fact, however—though one of the facts which does not swim into the ken of Secretary Shaw—that we have been steadily improving our position in recent years. Our merchants have been more enterprising. Our shippers have been more alert. Great manufacturing concerns have been more intelligently and continuously cultivating the South American market. The result has been a gain which, while not startling, is satisfactory, and shows what might be done by extension of the same methods. Thus, our exports to all South America, which in 1893 were $32,000,000, had increased by 1902 to $38,000,000. During the same period, imports from those countries to the United States had grown from $102,000,000 to $119,000,000. But this trade of over $150,000,000 a year does not seem to Secretary Shaw to be "respectable." What he really wants is the whole South American trade. He would not let Europe have a penny of it. "All for us," is his motto; and as long as ordinary business methods do not give us more than our present "paltry" share, he cries aloud for subsidies and more fighting vessels and more quarrels and interferences. But while he is thus talking about trade, business men have been quietly getting it.

Needless to say, Secretary Shaw's dreams are all of exports. Imports are, to so stout a "stand-patter" as he, very like the unclean thing. Yet if he would but lift up his eyes and look at the actual phenomena of foreign trade as it is carried on by the nations that make a serious business of it, he would see that give and take is its one great rule. In the case of Cuba, we are slowly recognizing this elementary truth. If we will not buy of her, she will not buy of us. But Argentina has been for years knocking at our doors for a similar reciprocity treaty. It was negotiated, in fact, and urged upon the Senate by President McKinley, only to go to the tomb of the Capulets. Until we are ready to do the obvious thing of making laws to remove the artificial fetters upon our South American trade, let us hear no more about subsidies and battleships to make the South Americans trade with us willy-nilly. Mr. Shaw would, of course, call all this mere "theory." But, the facts being what they are, we may say of that epithet, as Bentham said of the word "speculative" as applied to him, that it is a term "in use among official persons for the condemnation of whatsoever proposition is too adverse to private interests not to be hated, and at the same time too manifestly true to be denied."

EDITIONS DE LUXE.

A curious side current of the recent speculative debauch leads into the usually placid field of book publishing. Widely puffed *éditions de luxe* of no intrinsic merit have, by some gratifying law of compensation, been foisted on the gentlemen who were assiduously creating factitious stock-market values. At a recent sale in Philadelphia many thousands of dollars' worth of these books were knocked down at about 15 cents on the dollar—an instructive parallel to certain phenomena of forced liquidation in Wall Street. A Scott and a Dumas, for example, that had cost $100 a volume, sold for $10. The decline in prices was out of all proportion to the present, or the possible, fall in what one may call intrinsic book values. The wonder in both cases is not that certain classes of books and stocks are now so cheap, but that they were ever so high, for in both cases the prices were the product at best of manipulation, at worst of fraudulent representations.

And here comes in a curious principle of inversion. Stocks were unloaded readily because there were so many of them; *éditions de luxe* were floated because there were so few examples of each. Apparent rarity was the lure. It was tried in all the forms: say, five hundred of the regular edition, beside fifty on "large paper" and ten on Japanese vellum. Duplicate illustrations and the insertion of "hand-painted" water colors still further diversified the bait and confused the mind of the unwary purchaser. In most cases these

limited sets were of the slightest intrinsic merit—their contents a mere reprint of some standard work; manufacture showy rather than good, illustrations expensive rather than artistic, editorial features either absent or perfunctory. The appeal was frankly to those whose principle in assembling a library or a collection is "hang the expense." An edition of Dickens at $125,000 the set is the highwater mark of the movement. The challenge to virtually illiterate wealth could hardly be more flagrant.

The success with which many of these issues met was due to the snobbery of the expensive. The buyers actually thought they were getting the best simply because they paid three or four times the price of the standard editions. The delusion lay in the fond belief that any inherently worthless thing acquires value when found in only a few examples. Most of the pretentious reprints were not worth even the cost of manufacture, for editions superior in every way were on the market already. Thus the ready sale of the most expensive edition was a bit of jobbery between publishers and booksellers, on the strength of the buyer's ignorance or extravagance. It was bringing into the book trade the criterion of the newest and dearest thing. Most of these "sumptuous" editions were simply "gent's furnishings" for a library.

As always, there are exceptions to this rule. When a book is to be a masterpiece of the printer's art, there are good reasons for issuing it in a limited number; only a few hundred perfect impressions can be made from type, while the market for a fine piece of printing is necessarily restricted to a small class of connoisseurs. Nobody will quarrel with the Boston publishers who are offering a superb folio Montaigne in this fashion; nor yet with the New York house which gives to a new and original edition of Shakspere a distinctive typographical form, and limits the issue. But in such cases the value lies in every copy, and not in the extraneous fact that the editions are small. For beautiful printing one pays properly, whether it be Jenson's or William Morris's or Mr. De Vinne's, or Mr. Updike's. And the laborious editor, too, is worthy of his hire.

So far we have assumed that the application of the *de luxe* idea is conducted in good faith, that the purchaser at least gets the money's worth he has bargained for. A little inspection of the "cut-rate" book stores will prove that nothing is farther from the fact. Frequently the whole enterprise is fraudulent. The same plates often serve for a dozen "strictly limited issues," each one solemnly offering its small paper, large paper, Japanese vellum, etc. By changing the title-page, thus evading the law, and cheapening the illustrations, your five-dollar-a-volume treasure will turn up as a 37 cents a volume bargain—but still *de luxe*, and "strictly limited to one thousand copies." Furthermore, the levant morocco advertised in such cases will hardly bear inspection, while the audacity of a publisher who promises special binding by a famous French binder, dead a half century, needs no comment.

Bibliophiles and readers certainly have no reason to regret the depression in this industry. The victims of that peculiar form of inflation usually belonged to neither class. Bibliophiles know how to weigh the respective merits of, say, the Scott that his publishers put forth in the miniature form that the author loved, and with the Turner vignettes he admired; and the latest Waverly novels with special illustrations and an extra water-color. In short, unless a book has intrinsic value in printing or illustration, or sentimental value through some personal association, the bibliophile will none of it. Since the peculiar form of vanity to which these flimsy rarities appeal seem ineradicable, we propose that all whom it concerns should form a De Luxe Protective Association, Limited. Such a body could at least hold speculative publishers to their contracts, and could ensure that extra water-colors and the like were really "hand-painted."

PALERMO.

PALERMO, October, 1903.

Palermo is one of the most ancient cities in Europe, and has always been a place of political importance. It was a colony from Phœnicia, older than any of the Greek cities of Sicily, and may have been planted as far back as the days of Hiram, the Tyrian ally of King Solomon, long before the date to which tradition assigns the founding of Rome. Nor can any one who sees it wonder at its fortunes. It stands in the curve of a magnificent semicircular bay, guarded at both ends by bold and lofty mountains, with a plain behind it of unsurpassed fertility, enclosed by a ring of mountains whence streams available for irrigation descend. This plain—commonly called the Golden Shell—with the deep green of its orange and lemon groves, with vines and gray olives on the lower slopes of the hills behind, the white mass of the city in the centre, and the brilliant blue of the bay framed by the majestic capes which enclose it on either side, makes a landscape such as few great cities can show. Constantinople, Carthage, Lisbon, San Francisco, Mexico, Naples itself, are none of them set in a more beautiful nature. Needless to say that it was not natural beauty that led the early Phœnicians to fix themselves here. What attracted them was a small, well-sheltered harbor, branching into two arms, where their little vessels could ride in safety. Round its shores, and especially on the tongue between the arms, they built their houses and strengthened the settlement by walls, all traces of which have long since vanished. Of the ancient harbor only one arm now remains, the inlet which the people call the Cala or Old Port, now used by fishing-boats and small coasting-craft, while the steamers and large vessels line under the new mole nearly a mile away. Successive buildings and successive destructions during twenty-five centuries or more have changed the line of the shore; the upper end of the old haven has been filled up, and a Spanish fort occupies part of what was the north-western arm. But the importance of the harbor and the fertility of the plain behind had, long before vessels grew so much bigger that the old haven was useless for them, fully established Palermo as the capital of the island, superior not only to decayed Syracuse, but also to Messina and Catania, cities of great consequence in the Middle Ages, and both of them now again prosperous as busy centres of commerce.

Originally a practically autonomous colony of Sidon or Tyre, perhaps as old as Carthage herself, Palermo presently became dependent on Carthage, and was held by her great African sister until the Romans captured her in the course of the First Punic War. She was never Greek, though Pyrrhus once seized her, and though her name—Panormos, the All-Haven—is Greek, and perhaps translates the lost Phœnician name. She was a great town and a great stronghold under the Romans, and afterwards under the Arabian emirs of the ninth and tenth centuries. But her architectural interest begins with the Norman kings of Sicily, who loved to dwell here, and who transmitted their attachment to their descendant, the Emperor Frederick the Second (of the great Hohenstaufen line). That wonderful ruler spent here, in a palace whose scanty remains lie about two miles to the southeast of the city, most of the time he could spare from progresses through Italy and Germany, and directed from hence his unending contest with the Papacy. When the crown of Sicily had been grasped by Charles of Anjou, it was here that the insurrection of the Sicilian Vespers shook off French domination, and it was here that the Aragonese kings and long afterwards the viceroys of the kings of Spain held their court.

In large and flourishing cities, continuously inhabited through a long succession of centuries, the architectural records of earlier ages usually become obliterated by the reconstructions of later times. So it has been in Palermo. There are no traces of Carthaginian work, and very few of Roman work. Even from the Arab period only two or three buildings, one of them a mosque turned into a (now deserted) church, and none of them of artistic importance, still survive. The architectural history of the city practically begins with the days of the Norman kings, from which several noble churches remain. One of these, the Cathedral, in which Frederick the Second, his wife Constantia, and his father the Emperor Henry the Sixth, are buried, has been so wofully modernized within that one can form little idea of its original aspect; but the exterior, though deformed by an eighteenth-century cupola, is extremely rich and picturesque. The other three are specially remarkable for their mosaics of the eleventh and twelfth centuries, apparently executed by artists brought from Constantinople, for they have a thoroughly Byzantine character, and the inscriptions on them are mostly in Greek. Those in the exquisite little chapel of the Norman palace-castle, the most beautiful

palace-chapel in the world, and those of the vast and splendid cathedral of Monreale, on a hill four miles from the city, are (together with the contemporaneous mosaics of Cefalù, forty miles to the eastward on the north coast of the island) the finest examples of mosaic work to be found anywhere. They are superior in grace and finish even to the mosaics of Ravenna and to those that have survived the hands of modern restorers in the ancient churches of Rome and St. Mark's at Venice. Many are nobly conceived; some show a kind of vigorous realism which one scarcely expects in Byzantine art. It need hardly be said that it is only in Sicily, and in a very few cities of Italy (chiefly in those which I have named), and, of course, also in Constantinople and in Salonika, that specimens may be studied of this art, practically the only form of pictorial art which remains to us from the centuries that lie between the destruction of Pompeii and the days of Çimabue and Giotto.

In these Palermitan churches, and in others belonging to the thirteenth and fourteenth centuries, one discovers a very curious and unique blending of Byzantino-Romanesque and Gothic with Arabian elements. The result is an Arabo-Gothic style which, though something like it may be found in Southern Spain and Portugal, is really a style peculiar to Sicily, and marked by a charm of its own. The pointed arches have that kind of form which we associate with Moorish work, such as one finds it in the courts of the Alhambra. The Arab pendentive decoration often occurs. The columns of granite or marble have Norman strength; the capitals are exquisitely carved. Sicily is, in fact, a meeting-point of Oriental, Italian, and Northern influences; and out of these varied elements there has grown what one cannot call a Sicilian style, because it is not an expression of native Sicilian genius, but is really a sort of resultant of various foreign forces and methods, meeting in this point of contact, which was only a point of contact, and not an independent centre of creation. As the interest of early Sicilian history lies in the strife of Phœnician, Hellenic, and Roman elements, so the interest of the mediæval architecture of the island lies in the blending of Christian and Mussulman styles and influences. Though there are no buildings of conspicuous merit later than the thirteenth century, such pieces of work belonging to the fourteenth and fifteenth centuries as the stupid passion for restoration has allowed to survive, show a touch of Arab character in the form of the arch of door and window. No great church, no great palace, remains from these centuries, but there are in many churches little bits, fine in their design, sometimes, also, of delicate execution. Neither are the palaces of the sixteenth and seventeenth centuries to be despised. Some which may be seen in the old parts of the city, now abandoned to the poor, are dignified in proportions and rich in ornament. Spanish influence is sometimes discernible; but when one remembers how long the connection with Spain lasted, one is surprised that this influence was not stronger, especially as there was no vigorous national feeling to resist it. For Sicily has always been receptive. Neither in architecture nor in painting nor in sculpture—nor, indeed, since ancient Greek days, in literature—has her people shown any marked originality.

In its external aspect, Palermo is among the most picturesque of South European cities. It has not, of course, the charm of Venice or Florence. None of its buildings, except the cathedral at Monreale, is comparable to several which those cities can show. Even Siena or Perugia has preserved more mediæval dignity and variety. The new or northern half of the town is handsome enough, because the straight streets are well built and some have trees planted along them, but it is entirely flat and tame. The lower part, which lies along the sea, is very dirty, and not very old or peculiar in its type. But the southern half of the town, great part of which belongs to the fifteenth and sixteenth centuries, while many houses must be of a date still more remote, is full of variety and beauty. The streets are mostly narrow and often winding, seldom crossing one another at a right angle. But where there is a long straight street—and a few such have been cut during the last two or three hundred years—its end is closed either by the gray crags of a mountain or by the sparkling blue of the sea, and the joy of this lucent nature without is brought into the town. There are few big squares, but a great many little piazzas or irregular open spaces (*largo*). Trees stand here and there in the streets; oranges rise above the garden walls; projecting houses break the line of the narrow street; there is endless diversity of form and color. Water is not plentiful, but the streets are kept fairly clean, and there is a movement of people and vehicles, not a few well-appointed private carriages, which gives animation, and makes the place feel itself after all a capital—quite as much a local capital as any Italian city other than Rome.

So one may say of Palermo that it is bright, interesting, cheerful, a place where even the extreme poverty of the meaner quarters and the profusion of deserted and dismally blank churches and convents (a phenomenon even more noticeable in the smaller cities of Sicily) do not depress the visitor. It has not, however, that strong individuality which a city derives from the association either of its natural features or of its buildings with great events and dramatic scenes, or from the expression of the historical life of the people through a striking and distinctive architecture. Augsburg and Nürnberg, Edinburgh and Stockholm, Prague and Moscow, not to speak of the cities of middle and northern Italy, have in a sense more character than Palermo has, though they are less beautiful. Palermo, as a community of men, has no history which could express itself through its buildings. Its annals are, with the sole exception of the popular rising of the Sicilian Vespers, a record of captures by successive foreign Powers. Even in the uprising of Italy against the tyrants of sixty years ago, Messina has a more striking record. What gives to Palermo its unfailing and enduring charm is the exquisite beauty of its situation, coupled with the countless memories wherewith the neighborhood is rich. On the hill of Herkte (now Monte San Pellegrino) Hamilcar fixed himself in his long effort to drive the Roman garrison out of Palermo. On that mountain top the Arabs defended themselves, in a fort whose ruins still remain, against the attacks of the Normans; and, on the slope of Monreale beneath, William the Good watched his Byzantine artists labor at the decoration of his majestic church. In yonder grove stood the palace where Frederick the Second planned his laws, and whence he issued those denunciations of the Popes which led to the extinction of his race. Outside that gate, at the tolling of a bell from that gray tower, began the slaughter of the Vespers.

MADAME D'HOUDETOT.

PARIS, November 4, 1903.

Jean-Jacques Rousseau has made the name of Madame d'Houdetot immortal. We know everything about her at the time of her youth and before the Revolution, but little of her latter days. She retired during the troubled times of the Revolution to her country house at Sannois. Many of her friends became victims of the Terror; she no longer maintained her once famous salon, where she entertained so many illustrious men. She was, at the time of the Consulate, more than seventy years old, and her faithful friend, the Marquis de Saint-Lambert, author of the 'Saisons' (a poem which had its day of celebrity and would now be well forgotten but for its illustrations, which are valued by collectors of eighteenth-century engravings), was more than eighty years old.

So much interest is felt in Madame d'Houdetot that M. Gilbert Stenger has taken the pains to reconstruct the incidents of her old age. She still had friends who gave her all the news of the capital. Politics were seldom discussed at Sannois, as was but natural after the terrible events which made many political incidents appear insignificant. "Her old age could not," says M. Stenger, "conform to the habits of the new century, where people were all anxious for glory and wealth, where time was wanting for the reposefulness of a dreamy life without an object. Her years separated her from the noisy men who were the companions of Bonaparte." She remained, however, an object of interest to many who knew that she had inspired Rousseau with the greatest passion of his life; and Rousseau was still a sort of demigod for the generations at the beginning of the nineteenth century.

We have a description of her at the time by M. de Norvins, the historian. He was a very young man when he met her at Madame de la Briche's; and, as La Fontaine says, "Cet âge est sans pitié." Norvins relates:

"She was born plain, of a repulsive plainness, with a cast in her eyes. She was so deformed that the autumn of old age seemed in her almost decrepitude. She saw nothing. The sound of her voice was harsh and tremulous. Her waist, more than indefinable, was surmounted by thin shoulders. Her hair was quite gray. Madame d'Houdetot was a real ruin which sustained another ruin [Saint-Lambert]."

Norvins, after this cruel portrait, adds, however, that you soon forgot her incomparable ugliness, for her mind, her feelings, her sociability, had lost nothing of the activity, the power, the charm, which had so justly distinguished her. Nothing was more unforeseen, more delicate, more piquant than her conversation.

Madame de Rémusat, who left such valuable Memoirs, tells us that her mother, Madame de Vergennes, often took her to visit Madame d'Houdetot.

"It is impossible," she says, "to carry further than did Madame d'Houdetot, I will not say goodness, but kindness. Goodness requires a certain discernment of evil; it sees and forgives it. Madame d'Houdetot never observed it in anybody. We saw her actually suffer when the smallest blame was expressed before her, and on such occasions she imposed silence in a manner which was not disobliging, but which simply manifested the pain that she felt."

Chateaubriand met Madame d'Houdetot several times. Without being as bitter as Monsieur de Norvins, he speaks with disapprobation of the liaisons so common in the eighteenth century, and of which Madame d'Houdetot was a living example, as she had under her roof at the same time her husband and Saint-Lambert. He speaks severely (more severely than he had a right to do himself) of liaisons which persist, he says, only "par respect humain," and he doubts not that the wife, the husband, and the lover end by hating each other cordially, "with all the bad humor of age."

Wherever she went, Madame d'Houdetot was always for many years accompanied by Saint-Lambert. She wrote little verses on "Old Age," in which her feelings are plainly described:

"Oh! le bon temps que la vieillesse!
Ce qui fut plaisir est tristesse,
Ce qui fut rond devient pointu;
L'esprit même est cogne-fétu.
On entend mal, on n'y voit guère;
On a cent moyens de déplaire.
Ce qui charma, nous semble laid;
On voit le monde tel qu'il est.
Qui vous cherchait vous abandonne;
On se plaint d'avoir trop vécu.
Le bon sens, la froide vertu
Chez vous n'attirent plus personne,
Mais, dans ma retraite profonde,
Qu'un seul ami me reste au monde,
Je croirai n'avoir rien perdu."

The two last verses are really pretty, and well explain the sort of charm which people felt in the society of a person who had such a notion of friendship. In the amusing memoirs which Marmontel wrote for his children, he says:

"You have heard your mother and her family speak a thousand times of the pleasure we found in the society of M. de Saint-Lambert and of his friend the Countess d'Houdetot, and the charm there was in a society where wit, taste, love of letters, all the most essential and desirable qualities of the heart, drew us, attached us to the sage of Eaubonne [Saint-Lambert] or to the agreeable retreat of the Sévigné of Sannois [the Countess d'Houdetot]. Never did two minds and two souls form a more perfect concert of feeling and thought; and they essentially resembled each other in their amiable way of receiving their friends; their politeness was at the same time free, easy, and attentive—the politeness that comes from the heart and is truly felt only by the heart."

It might have been said of Saint-Lambert at the time we speak of, "Quantum mutatus ab illo!" Who would have recognized in him the brilliant cavalier who arrived in Paris with the reputation of a Don Juan, under the patronage of the Beauveau and the Boufflers, the happy rival of Voltaire, the friend of Madame du Châtelet? He took a house at Eaubonne, a very short distance from Sannois, and often entertained his friends there. His talent as a poet was very ordinary; it was suited to the frivolous taste of the end of the eighteenth century. Gilbert, a more serious poet, wrote of him:

"Saint-Lambert, noble auteur, dont la muse pédante
Fait des vers fort vantés par Voltaire qu'il vante,
Qui, du nom de poëmes, ornant de plats sermons
En quatre points mortels, a rimé les Saisons."

Madame du Deffand wrote to her friend Walpole: "This Saint-Lambert is a cold, stale, and false wit. He thinks himself overflowing with ideas, but is sterility itself; and, *'sans les roseaux, les ruisseaux, les ormeaux, et les rameaux,'* he would have very little to say."

What shall we say of the Count d'Houdetot? He lived for many years with a mistress, but at the worst moment of the Terror he found an asylum near his wife, at Sannois. The Count soon became the second *garde-malade* of Saint-Lambert, to whom he became much attached. He realized the type which has been personified in an amusing little vaudeville of our times as "le plus heureux des trois." The old Count was, after so many years of separation, very attentive to his wife, and he once said: "Madame d'Houdetot and myself had both of us the vocation of fidelity; only there was a misunderstanding between us."

M. Gilbert Stenger shows us, after the salon of Madame d'Houdetot, that of Madame de la Briche, her sister-in-law, and that of Madame d'Épinay, the friend of the Philosophers, who received Jean-Jacques Rousseau into her house. The society of these three ladies was the same. Madame de la Briche had among her friends D'Holbach, Helvétius, Grimm, Diderot; after the Revolution she received the representatives of the old families which had been dispersed by the emigration—Molé (who was to become her son-in-law), Pastoret, Vintimille, Pasquier, Chateaubriand, Norvins.

The Marquis de Saint-Lambert died in 1803; the Count d'Houdetot in 1806. After their death, the Countess, old as she was, had a romantic passion for M. de Sommarive, who had been vice-president of the Subalpine Republic. He was only forty years old, and might have been her son; her feelings towards him were purely maternal, but it pleased her to call it love. Every night, before going to bed, she used to bid him "Good night, M. de Saint-Lambert." She died holding his hand in hers. Chateaubriand, a few years after her death, made a visit to Sannois, and wrote in his memoirs:

"I lately saw again the house where lived Madame d'Houdetot. It is now a mere shell, reduced to the four walls. An abandoned hearth is always interesting; but what is there to say of a hearth before which sat neither beauty nor the mother of a family, nor religion, and whose embers, if they were not dispersed, would recall to our mind only days which knew nothing but to destroy?"

Such was the severe judgment, not unjust in reality, passed by the first inspirer of the romantic movement on the society of the eighteenth century, which, with all its charm, had the defect of a great frivolity that paved the way for the great Revolution.

Correspondence.

TITIAN'S SACRED AND PROFANE LOVE.

To the Editor of The Nation:

Sir: There seem to be several difficulties in accepting Signore Palmarini's apparently interesting interpretation of this picture, as reported by your correspondent of October 15:

I. If these figures are one, not two, women, why is one a head taller and a third larger than the other; and why has one yellow and the other red golden hair?

II. If the smaller, clothed woman is the virgin, why are the roses of love plucked by her and unculled on the side of the nude figure?

III. Why, then, is the first in an attitude characteristic of a matron, and the nude figure in a pose as notably virginal? And why does one cavalier ride away from the clothed figure, and the other toward the second in the virginal attitude?

IV. Why does Signore Palmarini call the purple glass bowl transparent and half full of water under the arm of the clothed figure a "brazier"; and the variegated Venetian glass shallow crystalline dish near the nude figure a "metal" vase?

V. How does he know that the hand of Cupid hidden deeply from sight under the water bears an "arrow"?

It is also noticeable that the carved figures which he calls Adam and Eve, and supposes to be "witnessing" the scene of the sleeper awaked by lashings, are really not looking at it, but in different directions, viz., the man at the girl; the girl with eyes upraised.

There are other objections to be made, but these seem to be sufficient to show that this ingenious suggestion is only another reading based on imperfect observation of the incidents of the picture, and, like all the others (except the most interesting version to which I called attention), failing to account for all these incidents, and palpably misstating many of them. Only a person color-blind, or judging the picture but from reproductions, could call the carefully drawn and beautifully colored Venetian glass vessels "braziers" and "metal" dishes; and this in itself is enough to show the quality of the writer's powers of observation.

William P. Andrews.

Rome, October 30, 1900.

Notes.

From Lecky's 'England in the 18th Century,' the Appletons purpose extracting 'The History of the French Revolution,' and making of it a separate volume

Macmillan & Co. are about to bring out 'The Hour-Glass, and Other Poems,' by W. B. Yeats, and 'The Art of Cross-Examination,' by Francis L. Wellman.

A campaign Life of Lincoln was composed by Joseph Hartwell Barrett, political editor of the Cincinnati *Gazette*, in 1860; now, bearing the degree of LL.D., he will offer through the Robert Clarke Co., Cincinnati, a two-volume work on 'Abraham Lincoln and his Presidency,' with portraits and unpublished letters.

More than a year ago we spoke in praise of Mr. Leonard Eckstein Opdycke's translation of Castiglione's 'The Book of the Courtier.' We have, then, only to welcome and describe the cheaper edition which the Scribners send us. It is no longer sold under limitation; the seventy-one portraits have dwindled to fifteen plates; neat gray boards, leather backed, have replaced gold-stamped vellum. But Mr. De Vinne's press-work is quite as beautiful as before; indeed the impression, except for a few emendations introduced by Mr. Opdycke, is

apparently identical with that of the finer issue. In this popular form, it is still a noble book to the eye, as it is, in whatever guise, to the mind. The discerning will find it appropriate for gifts. Those who read it will not lack instruction in the duties and graces that in all times have befitted a gentleman.

Dr. Henry van Dyke's 'Poems of Alfred Tennyson' is issued by Ginn & Co. in their admirable "Athenæum Series," and also in a library edition. From a comparison between the two forms of publication, one may calculate the ratio between the college student and the gentle reader. The selection of poems and the introduction are identical. From the general reader is withheld "A Note on Metre" and about one hundred and fifty pages of bibliographical and explanatory notes. His compensation is a more attractive binding, better paper, and a more tasteful letterpress. The selection seems excellent. Restriction of "Selections from Epic Poems" to thirty pages is commendable, the devotion of forty pages to "In Memoriam" perhaps disproportionate. The dramas are represented only by incidental songs. Tennyson was so much a master of the purple patch that he lends himself readily to the anthologist's purpose. We believe that this Janus-faced anthology will smile at both its audiences.

No holiday output is complete without a new Shakspere. Misses Charlotte Porter and Helen A. Clarke, while still continuing, with "The Comedie of Errors," their laudable handy reprint of the First Folio in the original "wording, spelling, and punctuation," with "notes, introduction, glossary, list of variorum readings, and selected criticism," issue through T. Y. Crowell & Co. also a complete set in twelve volumes, the "Pembroke Edition," in which the text and the accompanying foot-notes are from the same plates and the other matter is omitted. New and briefer introductions have been provided, however. Either of these publications is a very desirable possession or acquisition.

Kingsley's 'Hypatia' (in two volumes), 'Yeast,' and 'Poems,' in the "Library Edition" edited for J. F. Taylor & Co. by Maurice Kingsley, have now appeared; the Poems for the first time correctly dated for composition and publication. "The Saint's Tragedy alone fills nearly 200 pages, the "Andromeda" hexameters fill 28; the shorter pieces 150. The last poem in order and in point of time and composition is a ballad written in Colorado in 1874, during a desperate illness. The Letters and Memories have yet to come.

In various more or less showy bindings, H. M. Caldwell & Co. are publishing a little series of "Remarque Literary Classics"—'Poems of Sentiment' from Lord Byron; Thackeray's 'Letters to a Young Man About Town'; Penn's 'Some Fruits of Solitude,' with an introduction by Edmund Gosse—all clearly and rather elegantly printed. A slightly larger volume, yet still pocketable, consists of 'Selections from the Works of Herbert Spencer,' edited by Arthur D. Hall.

The reprints known as "Unit Books," from the method of estimating the price (Howard Wilford Bell), are neat in appearance and of good typography. Two just to hand are Hawthorne's 'Marble Faun' and 'Lincoln's Letters and Addresses.'

Secretary Hay's readable 'Castilian Days' is well on towards a quarter-century of copyright. It was his first-fruits in belles-lettres, and obtained at once a favorable reception. It now reappears in a holiday edition (Houghton, Mifflin & Co.), with some chapters omitted ("A Field-Night in the Cortes" among others, perhaps for diplomatic reasons), and with illustrations by Joseph Pennell. These drawings, either in wash or in crayon, are in marked contrast to the artist's line work, and are to our mind less effective, with few exceptions. One of these is surely the "Approach to Segovia."

The recent refreshing of interest in the elder Dumas has resulted in the enterprise of publishing an all but complete translation of his novels into English (London: Methuen & Co.), the omitted works being few and of slight importance. Besides 'Amaury,' 'Georges,' 'The Prince of Thieves,' 'Robin Hood,' and 'The Corsican Brothers,' we have now received 'The Three Musketeers,' with an introduction to the series by Mr. Andrew Lang. This is biographical rather than critical, and, being avowedly helped out by Mr. Davidson's admirable 'Life,' can hardly lay claim to originality; it is, however, rapid and light in touch as befits its subject, with a sensible vindication of Dumas's method of literary collaboration, but with the apparently inevitable obtrusion of a casual reference to spirit-rapping. Mr. Allinson's work as translator succeeds here and there in suggesting the extraordinary vitality of the simple French original.

Three handsome volumes of a translation of the 'Memoirs of Monsieur D'Artagnan' form a bulky addition to Dumas publications (Boston: Little, Brown & Co.). For the translator's sake, it may be wished that his scholarship and skill had been turned on worthier matter, for the contents of these volumes go but to show to what admirable use Dumas was capable of putting a spiritless narrative of adventures that could be made lively. But Mr. Ralph Nevill has done his task with so much conscientiousness as not to tamper with the slightly archaic dulness of Courtilz de Sandras, whom Bayle (strangely enough) considered a vivacious writer. The real value of the work consists in its frank revelations of the blackguardism which public opinion in those days looked upon as not incompatible with the conduct of a man of honor. Several good illustrations are a credit to the publishers.

The first part of a series of facsimiles from ancient manuscripts published by the New Palæographical Society has just appeared. It includes two papyri from the British Museum. No. 655, dated 127 B.C., is the record of a loan from Thoteus to Totoës and his wife Tacmoïs, all the parties being Persians living in Egypt. The loan draws no interest for three months, after which time the rate runs at 24 per cent., with a provision for an increase in the principal of 50 per cent. in case of default. The other papyrus records a loan of wine, also among Egyptianized Persians. There are specimen pages from a Cambridge manuscript of the Septuagint, from a Menologium in the Vatican Library, from the Gospels in Greek at Lambeth Palace, and from the Anglo-Saxon MS. in the Bodleian of Saint Gregory's Pastoral Care. Manumissions of the early twelfth century are reproduced from the Chapter Library at Exeter, and most beautiful of all are the pages reproduced from a Latin Psalter in the public library at Douai. This marvellously beautiful work belongs to the early fourteenth century. One of the pages is a very beautiful crucifixion, another has the initial B of the first Psalm. Even without the glory of its color, the charm of this masterpiece is wonderfully great. The subscribers who have revived the Palæographical Society have good reason to rejoice in this first instalment of its publications.

The *Geographical Journal* for November contains an account, by Mr. C. W. Campbell, of a recent journey in Mongolia. His description of the sparsely inhabited tableland which he crossed makes it difficult to realize that here was once the seat of an empire so vast that, to use the words of Sir Henry Yule, "in Asia and Eastern Europe, scarcely a dog might bark without Mongol leave." Possibly the old conditions, still witnessed to by numerous ruins of ancient cities, are about to be restored, for the pressure of population in Shansi and Chi-li is driving the Chinese into Mongolia. Already they have colonized the land for sixty miles beyond the Great Wall, ousting the Mongols as they advance. Among the inscriptions seen was a Tibetan prayer, each letter being "fifteen feet square, and neatly formed of stones hammered into the hillside." It could be read, with glasses, at a distance of two miles. A continuation of the summary of the results obtained in the bathymetrical survey of the freshwater lochs of Scotland is devoted to fourteen lochs in the Tay basin. Maps and illustrations accompany both articles.

In a report upon the natural resources and products of Cuba, published in the Consular Reports for November, special attention is directed to the forests. A list of seventy-two different kinds of trees in them, with their uses in various industries, is given, to which should be added "about fifty different species of fruit trees, and a great number of trees used for fuel, fencing, carpentry, and cabinetwork." Among a variety of other subjects treated in the same number may be noted industrial education in Europe, and the New South Wales Railway and Tramway Ambulance Corps. This organization has about 1,800 members, who have passed examinations and are certified as capable of rendering first aid to the injured. They are to be found in every branch of the service, in the workshops, and at every station of importance throughout the system. Instruction is given by the railway medical officer, who regularly visits the various centres throughout the State. Their services are not confined to accidents on the railway or in the workshops, but many cases are reported annually of aid given to the general public. As a special acknowledgment of exceptional services, gold and silver medals are presented. Every passenger train running outside the suburban section, and mixed trains on branch lines, are fitted with a medical chest and all ambulance requirements.

In connection with the foundation at Balliol College in 1893 of a Lewis Nettleship scholarship, the first public performance of the first orchestral composition of Mr. Donald Tovey, who was the Nettleship scholar first elected, deserves attention. This took place in St. James's Hall,

London, before an enthusiastic public early in November. Mr. Tovey's concerto for piano and orchestra has given rise to divergences of opinion. This work is more clearly wrought than his previous and minor compositions, and some find it "dry" and antiquated in form, while others complain of it as too much in the style of Brahms, whose antiquity is more than problematical. A tone of controversy is perhaps pardonable on the part of Mr. Tovey's adverse critics, since he saw fit to substitute for the now customary analytical programme a learned essay of his own on 'The Classical Concerto, its Nature and Purpose.' In this he gave a most detailed account and original appreciation of Mozart's twenty-fifth pianoforte concerto (Köchel 503), which was on his programme, but made little or no allusion to his own work.

—Houghton, Mifflin & Co. have issued the fourth and fifth volumes of their centenary Emerson, 'Representative Men' and 'English Traits.' A novel and interesting, but unsatisfactory portrait of Emerson appears in 'English Traits.' As one of the least transcendental of his presentments, it could not be better placed than in the least transcendental of his books. Mr. Edward Emerson's notes in these two volumes are even more delightful and important than in the three volumes preceding. This is what we should expect, the subjects treated here being such as specially invite annotation. Emerson's journal yields extremely good matter. As good, and less drawn upon heretofore, are the son's recollections of his father's attractions and repulsions, and his judgments of men and things. The 'English Traits' brings Emerson into his closest relations with Carlyle, and the notes add many incidents of their acquaintance to our previous store. It is interesting to find Emerson writing, after his first visit, "I never saw more amiableness than in his countenance." With each set of notes there is some introductory matter giving the circumstances under which the books were written. Several adverse contemporary criticisms of 'Representative Men' are mentioned, but not Froude's (1850), which was as ungracious as any. Already Emerson had recorded his opinion of Froude in a private letter as a noble youth to whom his heart warmed. Emerson's journal shows that in selecting his Representative Men he denied himself one. "Jesus should properly be one head; but it requires great power of intellect and sentiment to subdue the biases of the mind of the age and render historic judgment to the world's chief saint." In 'English Traits' it is interesting to find Garrison the bearer of the invitation that took Emerson to England in 1848. (They had previously been linked together, but unknowingly, at Wilberforce's funeral in 1833.) The time was one of great social and political upheaval, but Emerson's detachment, both in London and in Paris, was characteristic if not admirable. One is tempted to retort on his "Why so hot, my little man?" "Why so cold, dear friend and helper?" Many of the extracts from Emerson's journals and letters give a sharper edge to what he deliberately put into his books. We read of Carlyle: "He is a bacchanal in the strong waters of vituperation." We have this also: "I am to say what is strange, but it so happened that, the higher were the persons in the social scale whom I conversed with, the less marked was their national accent, and the more I found them like the most cultivated persons in America."

—Thomas Arthur Strange's 'Historical Guide to French Interiors, Furniture, Decoration Woodwork and the Allied Arts,' during the last half of the seventeenth century, the whole of the eighteenth century, and the earlier part of the nineteenth (Charles Scribner's Sons), is made up almost wholly of pictures, and its four hundred pages must contain 1,500 separate designs. To be so full of matter and still cost five dollars only, it has to be cheaply made; and certainly it has a strangely rough, slighted, uncared-for look, as if the scrapbook of a child. But the reproductions are from good and even admittedly standard models of design, and the brief text is judicious and trustworthy. There are some motives of design which can be sufficiently well set forth in very cheaply made cuts. Wrought-iron railings and gates are of that class; you gain very little by having a fine and delicate drawing—it is the exact curve you want and nothing else. There are carvings of which even a poorly made half-tone print gives as much as the student needs. Highly wrought tapestry cannot be represented in an adequate fashion except by very costly photogravures, and these rough cuts give all that any other copy could give—the general layout of the design. As for the drawings of decorative subjects left behind in scores of published volumes by the eighteenth-century men, the reproductions of their pages here are not wholly inadequate. In short, we have as useful a book of subjects as can be asked for at the price.

—Mrs. E. W. Champney's 'Romance of the Bourbon Châteaux' is the third member of a series, of which the 'Romance of the Feudal Châteaux' and 'Romance of the Renaissance Châteaux' have been reviewed by us (Putnams). Of the second we said: "The stories can be read by one who will have romance at any price; otherwise, the book can be disregarded except for the illustrations." The present volume might be qualified in almost identical terms. By the "Bourbon Châteaux" are meant Versailles, Vaux, St. Fargeau, Bussy-Rabutin, the larger and the smaller Trianons, the Luxembourg, Maisons-sur-Seine, Beaumesnil, Chantilly, Cheverny, St. Cloud, Le Lude, and O *(le château d'O)*. Now, it is evident that these are "Bourbon" not by creation but by appropriation. Everything in France became Bourbon in the reign of Louis XIV. Still, it is good to have the photographs, twenty-five of them, of purely architectural character, and some of little-known subjects. The legend, "from a photograph by James Wells Champney," is attached to the title of nearly all of them. But there are, as in the former volumes, copies of paintings of popular and romantic subjects — Vetter's "Cardinal Mazarin Choosing Pictures" and "Louis XIV. and Molière," the "Last Roll-Call of the Reign of Terror," by Louis Müller, and George Cain's "Pajon Modelling Du Barry's Bust"; and, more interesting than all, a photogravure of an important Watteau in the Wallace Collection. For these illustrations alone the book might well be bought and preserved; but the text of it, except for one chapter, is a mere hash of eighteenth-century stories of adventure and intrigue, which read much better in the original French.

—'Eighty Years of Union,' by James Schouler, is an attractive volume of some 400 pages, just issued from the press of Dodd, Mead & Co. It is not a new work. Neither is it an abridgment or condensation of Mr. Schouler's six-volume history of the United States. It consists of a selection of "suitable passages so that the reader may have before him a consecutive narrative, in the historian's own words and original expressions, so far as the present space permits." The sub-title, "A Short History of the United States," is thus strictly a misnomer. While the narrative may be "consecutive," it is obvious that the mode of constructing the book has made it quite impossible to achieve a proper relative emphasis. The excellent characterization of Washington fills ten pages. This is not an excessive amount for a six-volume history, but it is out of the question in a one-volume history. What we have here is, then, a very good selection of extracts from the larger history, but not in any sense a history of the United States. The rest of these extracts are, indeed, characterizations of the chief leaders—Washington, Jefferson, the Adamses, Jackson, Clay, Webster, Lincoln. Of great measures we learn little, such as the measures of Hamilton, the policy of Jefferson, the Louisiana negotiations, etc. But the book is far more interesting reading than any mere summary of the period could be. One gets the best parts of Mr. Schouler's long history in brief space, yet avoids the dry brevity of the conventional manual. Mr. Schouler has supervised the publication, but apparently has changed nothing, even where recent investigations have made such change very desirable. It is, for example no longer possible, since the appearance of Mr. McCaleb's book, to say that Wilkinson, "by his energetic preparations at New Orleans, crushed the enterprise," etc. (p. 106). The book will be widely read, and it is a pleasure to recommend this last volume of one who has for so long given his best attention to the study of American history.

—Mr. Henry Bradley carries the letter L from Lock to its conclusion, in the October issue of the Oxford English Dictionary (H. Frowde). Worthy of remark in the classical features of this vocabulary are the endings -loger (which began with Astrologer in the fourteenth century, but is no longer a living formative, having been superseded by -logist), -logian (likewise superseded, and leading off with Theologian), -logue (now seldom used to designate persons), -logic and the much more frequent -logical (with a difference in meaning). Interest centres rather in the English portion, and here we encounter seven substantives and four verbs Lop, and seven substantives and one verb Lug. Pepys supplies the earliest quotation for Longhand (1666). Mr. Bradley enumerates the several proper applications of the title Lord, and, for the Lord Mayor, the cities which are privileged to have one. The phrase "No love is lost between them" is shown to have been long ambiguous, for while, from 1640 to 1824 or later, it implied mutual affection, from 1622 it also meant the re-

verse down to the present day, when this is the sole meaning. Those who recall the late George P. Marsh's pet aversion to Lovely as applied to inanimate things, will find citations of that description going back to the fourteenth century. "This trout looks lovely," says Izaak Walton in 1653. As for the much decried expression to "look well," etc., "This use [with adverb of manner]," says Mr. Bradley, "is often indiscriminately condemned, but is justly censurable only where *look* is virtually equivalent to *seem*, so that it requires a predicative complement and not a qualification of manner [to have a certain look or appearance]. Owing, however, to the prejudice excited by the inaccurate use, *look* now rarely occurs with adverbs of manner other than *well, ill, badly*." This is a clear case of being afraid of one's own language.

—There are some Americanisms in this section, of all of which we may not be equally proud. Loco-foco is a formation of uncertain occasion, which began its career as the name of a self-igniting cigar or match, then quickly passed over to a political party, and now is obsolete in both senses, except for the historian. Lot, for land, is a native product, not unhandy. The first quotation for Lounge in the sense of 'sofa' is from 'Uncle Tom's Cabin'; and, thanks to Mr. Albert Matthews, Lynch and Lynch Law are thoroughly if not conclusively exhibited in origin and development of usage. Logy is of our obscure begetting (from 1859), and does not appear to have become anglicized. Lump (vb.), as in the colloquial "If you don't like it, you can lump it," we do not discover under that word. The parting salutation, "So long!" dates here from 1865. Whitman embalmed it three years later, and we recall a poem of his, bearing this refrain, which was translated by a German admirer with an odd pathetic implication calculated to excite the risibles of an American reader, as if "Ta-ta!" had been so dignified.

—In his account of Mr. I. B. Richman's recent book on Rhode Island, in the *English Historical Review* for October-December,—Mr. Louis Dyer discusses the origin of the name "Rhode Island." Agreeing with Mr. Richman and Mr. S. S. Rider that the Dutch derivation accepted by Bancroft is palpably absurd, he also rejects the idea that the name took its origin from Verrazano's speaking, in 1582, of Aquidneck Island as "about the bigness of the Island of Rhodes." As a matter of fact, Rhodes happens to be more than ten times the size of Rhode Island, and it would be difficult to find two portions of the earth's surface more totally dissimilar, so that the only reason for supposing that Verrazano's most incompetent comparison influenced the naming of Rhode Island is that it was in print before Aquidneck was so named (1652?). Mr. Dyer refuses to take Roger Williams's statement, (made in 1666), that "Rhode Island, like the Island of Rhodes, is an Island of Roses," as a tacit record of the naming of Aquidneck for a remote and unknown island in the Mediterranean. Such a proceeding would be so completely out of the range of early seventeenth-century thought among colonists that Mr. Dyer thinks it more likely that Rhode Island was named, like Massachusetts and Connecticut, by the aborigines. It so happened that Aquidneck admitted of a terse and euphonious translation. Its meaning is given, Mr. Dyer argues, in a libellous sentence addressed in 1661 to John Winthrop, jr., by the Atherton associates, who say: "Roade Island is . . . a roade, refuge, asylum to evil livers." Narragansett Bay is the Road near the American Newport, as Cowes Roads lie close to Newport in the Isle of Wight. *Road* as a *refuge for ships* is perfectly good English. *Aquidneck* certainly means the "island in the mouth of the bay," since Eliot applies the word *Aquidnesick* = 'the little island in the mouth of the bay' (so Trumbull translates it) to the islet Clauda off the Cretan coast. Substract *si* as presumably diminutive, and, Mr. Dyer maintains, you have *Aquidneck* = Rhode Island.

—Mr. Jacques Reich again appeals to the taste of the holiday season with a brace of etched portraits on a grand scale. His subjects this year are Alexander Hamilton, after the portrait by Trumbull in the New York City Hall, and Franklin, after Duplessis's painting in the Boston Fine Arts Museum. Both these plates we believe will commend themselves for their art and for the characters depicted. They happen to be in admirable contrast when hung together; in scheme of lighting on the one hand, and in personality on the other. Hamilton's vigorous and youthful head is instinct with keenness and pure intellectuality, and the high lights of face and neckerchief spring from an almost solid black background. Franklin's features show their customary phlegm and repose, with senile marks about the mouth, his long hair mingling with his fur collar; the whole in a more (and fittingly) subdued tone. Each plate bears evidence of the artist's increasing mastery, and is an authentic document. For etching, as for wood-engraving, the intervention of photography means not the revival but the beginning of portraiture from paintings of the past, most of which, it may truly be said, have never been engraved at all in spite of the multitude of so-called copies. Mr. Reich's address is 2 West 14th Street.

JOHN SARGENT, PAINTER.

The Work of John S. Sargent, R.A. With an Introductory Note by Mrs. Meynell. London: William Heinemann; New York: Charles Scribner's Sons. 1903.

Since the death of Mr. Whistler, Mr. Sargent holds, by all odds, the highest and most conspicuous position before the world of any artist whom we can claim as in some sort an American—indeed, he is today one of the most famous artists of any country, easily the first painter of England, and one of the first wherever he may find himself. Not only is he indubitably one of the most brilliant of living artists, but his enthusiastic admirers are ready to proclaim him one of the great artists of all times, and to invite comparison of his works with those of the greatest of his predecessors. He has painted a vast number of portraits, a few pictures, and some mural decorations which, from the ability displayed in them and the originality of their conception, are certainly to be reckoned among the most considerable efforts in that branch of art produced within a century past. The volume before us represents in its sixty-two photogravure plates, as well as painting can be represented in black and white, the best-known of his pictures and many of the most successful of his portraits, but it omits entirely his mural paintings. It is essentially a volume of plates, there being no other text than a fourteen-page "Introductory Note" by Mrs. Meynell—a pleasantly written appreciation which makes no pretence at thoroughness of criticism. Short of a gathering together of the original paintings, it would be difficult to imagine a better opportunity for a general view of Sargent's work as a painter—not as a decorator—or a more tempting occasion for the analysis of his genius. His mural paintings would, in any case, require separate and exhaustive treatment, not only because they are apart from the rest of his work, but because the demands of this kind of art are altogether different from those made upon the artist by portraiture and *genre* painting (and Sargent's largest pictures, other than the paintings in the Boston Public Library, are still essentially *genre* pictures), and the whole point of view of the critic must be shifted to deal with the new considerations involved.

It must be understood, then, at the outset, that nothing we have now to say has any reference to these decorations. If, in the discussion of Sargent's other work, it should be necessary to point out those things in which he is least great, it will be done in no spirit of denigration. He is so large a figure in modern art that the attempt to define his limitations can only serve to accent his magnitude. To show where he is strongest, it is necessary to show where he is less strong; and if any comparisons are implied, they are only with the highest. One begins by accepting him as head and shoulders above most of his contemporaries; the effort is to show wherein he resembles or differs from the great masters of other times, and to arrive at an approximate idea of the place which he may eventually hold among them. It is with this desire that one turns over the pages containing the record of a career already so astonishing, though we may reasonably hope that it is not more than half run.

In the first place, it becomes immediately evident that Sargent, as becomes a portrait painter, belongs to the class of observers rather than to that of the composers. With some exceptions, he seems at his best almost in proportion to the limitation of his subject-matter; his single heads and figures being more thoroughly satisfactory than his groups of several figures. The exceptions are extremely significant, and do, in this case, really go far to prove the rule, for they are pictures of things seen, not of things arranged. They are such pictures as "El Jaleo" or the smaller "Spanish Dance," as "Carnation, Lily, Lily, Rose" or the portrait of "The Children of E. D. Boit"—things which we should call admirably and ingeniously arranged were it not for the feeling that they happened so; that the artist seized upon a fortuitous natural composition and recorded it, either from memory or directly from the thing. Of course, one does not mean that it required no sense of composition to do this, or that the natural arrangement was unmodified by the artistic sense—only that the immediate inspiration of nature was necessary to stimulate the artist's sense of composition to this point, and that he is less happy when he is called upon to conceive

beforehand an arrangement into which his observations of nature shall be made to fit—when he is asked to invent a natural grouping of several figures which shall afterwards be studied from the life. Instances of this relative inferiority to his own best are such groups as "Lady Elcho, Mrs. Tennant, and Mrs. Adeane" and "The Ladies Alexandra, Mary, and Theo Acheson," which, with all their brilliancy, and in spite of their great beauty in the several parts, we cannot find altogether as satisfactory as either Mr. Sargent's single portraits or his pictures. The latter group, with its reminiscence of Reynolds or Gainsborough, is also, like the portrait of "Miss Daisy Leiter" and one or two other things in which he has experimented in the vein of eighteenth-century art, a reminder that, like other observers, he is best when most frankly of his own time. They are extremely clever, as they could not well help being, being his, but they are not the real thing; and one feels that one has lost more in losing something of his acute observation of the actual than one has gained by the addition of what are, after all, transplanted graces. It is the unexpected that we expect from Mr. Sargent—his personal interpretation of what is; not the attempt to square it with other men's interpretation of what was.

Sargent, then, is to be ranked with the observers and painters—with the realists, in a sense, for there is a realism of elegance as well as of ugliness—and his task is to show us what he sees with his bodily eyes, not what he can imagine of beautiful or august. The art of the pure painters, of whom he is one, is a mingling of observation and craftsmanship, and their relative importance is determined partly by the rarity of their observations and the kind of facts observed by them, partly by the beauty which they know how to get out of the actual materials of their art and their handling of them. That Sargent is a past master of his craft it is no longer necessary to say, and the eulogy of his workmanship is already made. Mrs. Meynell quotes a passage from a letter of Ruskin's to Rossetti in which he says: "There are two methods of laying oil color which can be proved right; . . . one of them having no display of hand, the other involving it essentially and as an element of its beauty." She rather objects to the word "display," thinking that, if writing for publication, Ruskin would have changed it for one of more dignity; but the word seems to us the right one. With the painters whom Fromentin calls *cachottier*, Sargent has no affinity, whether they paint simply and beautifully, with a handling that escapes detection in its very simplicity, or whether they indulge in mysterious processes savoring at once of cookery and of alchemy. There are no tricks in his trade—he is perfectly frank, and everything is on the surface, for him who runs to read. It does not satisfy him that his work is right, or even that it is actually easy for him to make it so—it must *look* easy. He is one of the great virtuosi of the brush, and he counts upon the pleasure his virtuosity will afford you for a great part of his effect. He will spare no pains to give you the impression that he has had to take none, and will repaint any part of his picture that may have cost too much effort, giving more labor that it may seem to have needed less. In this particular and perfectly legitimate charm of art—the charm of prompt and efficient execution, the magic of the hand—Sargent is, perhaps, the equal of any one, even of the greatest. It remains to examine what are the characteristics of the vision which he fixes for us, what are the qualities of nature best observed by the eye and brain so admirably served.

Of the three great classes of truths which it is the business of the painter to observe, truths of color, of light and shade and tone, and of form, it is the truths of form that Sargent observes most surely, and it is as a draughtsman that he most entirely triumphs. He is above all a painter of the shapes of things. This is partly a matter of temperament and gift, partly a matter of training and technical method. In discussing his gift for color, the photogravures, of course, afford us no aid, and they are not of much more service in the matter of tone; we must rely upon our memory of the originals or of other original pictures by him. There is nothing in which the great colorists have more delighted than in the painting of human flesh, and the technical methods which Sargent originally acquired from his master, Carolus Duran, are, in spite of modification in his hands, ill fitted to express the peculiar irradiation and coloring from beneath which are the great charm of that substance. The sweeps of opaque color laid on with a full brush are apt to give a texture as of drapery, no matter how accurate the particular tints may be; and if we are to have the pleasure of instantaneous execution, we must generally accept with it some diminution of the pleasure derivable from beautiful flesh painting. The great painters of flesh have generally been more *cachottier;* and, indeed, it may be said that the highest beauty of coloring is always more or less incompatible with too great frankness of procedure, and demands a certain reticence and mystery. Whether the great technicians have felt this incompatibility and contented themselves with only a relative perfection of color, or whether a less acute sensitiveness to color was a condition precedent to their becoming great technicians, it is certain that the highest refinement of color has not hitherto been found in conjunction with the most direct handling, and that, even with Velasquez, as his color becomes more beautiful his handling will generally be found more mysterious. Something of the same sort is true, to a lesser degree, with light and shade; and the masters of chiaroscuro, the delicate discriminators of values, the creators of tone, have generally been mysterious technicians. Indeed, it may be said that light and shade is mystery, and has been the favorite means of expression of the painters to whom mystery makes the greatest appeal. No one would think of denying to Sargent a good natural eye for color, or that sound training in values which is the basis of so much that is best in modern painting; but these are not the elements of art in which he is strongest or those which his methods are best fitted to express.

Of all those qualities of things with which the art of painting deals, form is the most concrete, the least mysterious and illusory, the least a semblance and the most a reality; and it is form, therefore, which is the most readily expressible by the direct and simple methods of the great executants. The master craftsmen—the *painters* in the more limited sense—have always been great draughtsmen. There is a confusion, here, of long standing. We have been so accustomed to consider drawing a matter of line that we have confined the term draughtsman to the linealists, and have set them over against the painters as a separate and opposing class. The true division is between the draughtsmen by line and the draughtsmen by mass; and the art of painting as Hals practised it, and as Sargent practises it, is the representation of objects in their bulk rather than by their edges (by the analysis of their projecting or retreating planes) and the rendering of the forms thus distinguished in a direct and forcible manner, each touch of the brush answering in shape and size, and, as far as possible, in color and value, to one of these natural planes.

Sargent was an admirable linear draughtsman before he was a painter, and is now an exquisite linear draughtsman when he cares to be so. He is a draughtsman of the nude figure as well as of the head, as his "Egyptian Girl" in this volume should remind us if it were necessary. It is his profound knowledge of form that renders his virtuosity possible, as his virtuosity is the instantaneous expression of his vivid sense of form; and any attempt to imitate his manner without his matter is an invitation to disaster—an invitation which his great prestige leads too many to extend. If by drawing we mean the power of clearly seeing and accurately rendering the actual forms of things—leaving aside all questions of idealization or expression by abstract line—Sargent is probably the greatest of living draughtsmen, and that is why he is a great painter.

It is this power of accurate drawing, in its variety of manifestations from Van Eyck to Frans Hals, that has always marked the great portrait painters as distinguished from the imaginative painters; but there is another power that has often enough been credited to them—that of insight. They have been thought to see below the surface, to form a definite conception of the character of their sitters, and to transfer that conception in some way to their canvas and to make us see it. To none of them has this power been more often credited than to Sargent, and stories are told of how this or that trait has been brought out in some picture of his which, though latent in the sitter, was unknown to the sitter's friends. On the strength of such stories, and of the impression of lifelikeness which his portraits make, he has even been called a psychologist. Is he so, or was any artist ever so? One may certainly argue that it is the business of the painter to see what is and record it, not to form theories of why it is—to have an eye for character, if you like, not an opinion of character. He may have an instinct for what is most characteristic in a face, and accent those things in it which are essentially individual, without necessarily having any clear conception of the individuality itself. As to Mr. Sargent, there is a story which may be neither more nor less true than the others to which we have referred. He had painted a portrait in which he was thought to have brought out the inner nature of his sitter, and to have "seen through the veil" of the external man. When asked about it, he is said to have expressed

some annoyance at the idea, and to have remarked: "If there were a veil, I should paint the veil. I can paint only what I see." Whether he said it or not, we are inclined to think that this sentence expresses the truth. Sargent, like other artists, paints his impression, and he paints it more frankly and directly than many, with less brooding and less search for subtleties—paints it strongly and without reservation; and he leaves the psychology to those who shall look at the picture. His affair is with shapes and external aspects, not with the meaning of them; and because he has an extraordinary organization for seeing these aspects truly and rendering them powerfully, with that slight touch of exaggeration which makes them more vivid to us than nature, and with those eliminations of the non-essential which are the necessity of art, we who look on can read more from the painted face than from the real one, and credit him with having written all that we have read.

One need not deny that there have been artists who have done something more or something other than this; men of a different type from Sargent, more attentive, more submissive, fuller of a tremulous sympathy, more ready to sink their own personality in that of the sitter, and who have given a more intimate life to their portraits than he seems to us to do. Sargent is always himself—John Sargent, painter—quite cool and in the full possession of his powers, with the most wonderful eye and hand for receiving and recording impressions of the look of things that are now to be found in the world. The masters with whom it is inevitable that he should be compared are Hals and Velasquez; and if it must be left to posterity to say how nearly he has equalled them, we can be sure, even now, that his work is more like theirs than any other that has been produced in the past century.

DARWIN'S MUNICIPAL TRADE.

Municipal Trade. By Leonard Darwin. E P. Dutton & Co. 1903.

In the waste of political pseudo-science, it is infinitely refreshing to come upon such a work as Major Darwin's. It is like the shadow of a great rock in a dry and thirsty land. The subject itself is of the highest importance, for it seems likely to affect property as extensively as the protective system, and even more directly. Great as the subject is, the treatment is worthy of it. The "inverse deductive method" has never been more admirably applied, and the treatise as a whole reflects honor on the illustrious name of Darwin. Occasionally, it is true, the author may be charged with assuming too much; *axiomata media* are not always scientifically established. But such instances are exceptional, and the chain of reasoning which extends through the book has no links which are not equal to the strain laid upon them. Such a treatise, of course, cannot be popular. No one who is not able to read the 'Origin of Species' with pleasure and with intelligence will be likely to obtain edification from this book. But whoever has the zeal to grapple earnestly with a problem of the utmost difficulty, will find that, with Major Darwin's assistance, the solution is attainable, and that he will reach conclusions so well supported with argument as to be scientifically impregnable.

The words "Municipal Trade" are intended to cover all enterprises managed by local governing bodies that are carried on for profit when undertaken by private persons. Such enterprises have always been carried on by municipalities; but within the last few years, in England especially, the practice has enormously increased. Thus, in 1867, the debts of the local governing bodies in England and Wales amounted to £60,000,000, while in 1900 they were £294,000,000. Not all of this represents capital invested in municipal trading, but most of it is so accounted for; the ratable value of the country, however, increased only 30 per cent. in the last twenty-five years. The debt *per caput* is now nearly $42. At the same time, the municipal governments are constantly seeking to enlarge their trading, and to engage in various competitive industries. To ascertain the degree of success attained by governing bodies in this field of activity, and to inquire into the wisdom of the policy, in the past and in the future, may well call into exercise the highest talents.

The first fact established by Major Darwin is that workmen employed by municipalities receive more pay than men doing like work for other employers. He then proves that it is a mistake to suppose that municipalities can borrow at a lower rate of interest than private traders, the supposition being founded on a misunderstanding of the conditions attached to the loans. Hence the cost of public works is, as a rule, greater than that of private enterprises, and the result is that consumers in general, or the rate-payers, are taxed in order that the workmen employed by the Government may receive more pay than they could get in other employment. They constitute a privileged class, and they naturally combine in order to preserve and extend their privileges. They have votes, and they use them in support of such rulers as favor their demands. Rulers, when elective, are under temptation to make promises to voters and to reward their supporters. Wages are normally subject to great fluctuations; but elective rulers seldom venture to reduce the wages of public servants. Any one proposing such reduction is likely to be defeated when he next presents himself as a candidate for office. Similar conditions affect, more or less, all questions of public expenditure. Rulers who oppose excessive expenditure are likely to incur the displeasure of municipal employees, and a premium is thus placed on the return of the least scrupulous candidates.

Hence, where many voters are supported by the public funds, high-minded men are less likely to be elected, and they are less likely to seek election. They can promise no favors, and they will not desire to assume office which involves constant friction with employees. Moreover, the presence of such men in governing bodies is disliked by the less scrupulous members; and members of this class are generally potent in the party organizations, and have great influence in the choice of candidates. The more municipal trade extends, the greater the amount of patronage; and we have seen in this country that it is almost impossible to prevent the rewarding of party followers in this way. Hence there is a strong pressure to multiply offices for the sake of increasing patronage. On the other hand, the diminution in the number of offices, with the consequent displacement of employees, is something that few elective rulers have the courage to recommend or the ability to accomplish. It seems, therefore, that the extension of municipal trade is necessarily attended with an increase of demoralizing conditions, and that this increase is likely to be progressive. It is a matter of very great difficulty to induce a municipality to relinquish any enterprise after it has once engaged in it, and the instances in which such a step has been taken, before bankruptcy was imminent, have been very rare.

Illustrations of these truths from our own experience readily suggest themselves, and we need not go to England for examples. We have been told so much of Glasgow, however, as to make it worth notice that the employees of that city can cast from 10 to 18 per cent. of the total vote—a proportion sufficient to turn the scale in most elections. There is in Edinburgh a "Municipal Workers' Committee" which exerts at times a controlling influence. Hitherto the local governments of England have been comparatively pure; but they have only recently engaged much in trade, and corrupting influences have not yet exerted their full power. The argument is advanced that the city governments of the United States have been very corrupt, although not carrying on trade; and that if the number of services under their control were increased, there would be less corruption. The conclusion has no apparent connection with the premises; and, as Major Darwin shows, there are better ways of dealing with the problem than to increase the number of persons directly interested in extravagant expenditure. He adds that our cities have perhaps passed through the worst of their corruption, the business of serving the public being now pretty completely apportioned, and that it will be much easier to obtain fair terms from private companies now that their investments have been largely made, than when they were obtaining concessions of which the value was little appreciated. There is ample evidence to support this conclusion. In the future there will be more corruption from legislative attempts to blackmail shareholders in public-service corporations than from attacks on legislative virtue by promoters. If the character of our rulers is improved, there will be less corruption in their dealing with the corporations. If the opportunities for corruption are enlarged by municipal trading, the character of our rulers is more likely to deteriorate than to improve.

The admission is sometimes made by American socialists that civil-service reform is necessary before Municipal Trade can be extensively introduced. This consideration is disposed of by Major Darwin in a single sentence:

> "When such admissions are made, the argument tends to become somewhat contradictory; for those who urge that municipal trade is necessary as a cure for corruption, cannot logically add that corruption must first be cured by civil-service reform, without which Municipal Trade would only make matters worse."

The evils resulting from Municipal Trade do not cause Major Darwin to condemn it

altogether. In the case of water supply, he seems to favor municipal ownership and management; and sewerage and other matters involving the opening of the streets should be attended to by Government. We cannot follow his argument, step by step, but the main lines are as follows: Governing bodies are not fitted to engage in competitive industries, which many English municipalities are now doing and more are desirous to do. They have greater powers and opportunities than private traders for checking competition, and they often seek to suppress it altogether by legislative authority. In fact, a very powerful body, the Municipal Corporations Association, has definitely announced this principle. The lack of electric light in many English towns is thus explained; the Government, having its own gas plant, has successfully opposed electrical enterprises because they would interfere with its monopoly. In a number of instances the authorities have obtained charters for electric lighting, and, having thus headed off competition, have made no further use of their powers. In the case of tramways owned by municipalities, competing omnibus lines are liable to be interfered with by the Government. The municipalities now make it a rule to take the power, in their by-laws, to carry more passengers than can be seated—something which their competitors would probably not be allowed to do. The facts adduced in this connection are conclusive, and it is very evident that municipalities tend to seek statutory protection for their enterprises, and to overcome competition by selling their products at a loss, making up the deficiency by higher taxes. The injustice of such proceedings is properly described by Major Darwin. It happens not infrequently that the greater part of the rates is paid by persons having no votes in the municipality, and in such cases these persons may be taxed for the very purpose of benefiting certain of the residents at their expense. So far as rents are raised by taxation, tenants who, under the system of compounding the rates, are unaware that they contribute to the taxes, may really bear the results of their own folly. Where rents cannot be raised, the value of property will decline, and the growth of the town be checked by the losses of property owners.

Major Darwin fully perceives the justice of controlling trades that tend to be monopolized, and of securing to the community such increment of value as is unearned by those holding concessions for furnishing things generally used in a community. Water, however, is the only commodity for which there is no substitute, and the furnishing of which is not subject to competition. Gas works must meet the competition of electric light, and both are subject to the competition of oil and even of candles. Tramways have to allow for omnibuses and motor carriages. Such competition may not be sufficient to produce fair prices; but the remedy is not to be sought in Municipal Trade. Monopolies can be regulated, and most of the advantages claimed for municipal trade can thus be obtained for the public without the evils of political corruption and governmental extravagance and injustice. The fact that Municipal Trade is popular, as Major Darwin demonstrates, affords little evidence that it is advantageous. The statistics purporting to show the results of experiments of this kind, when subjected to careful scrutiny, are worthless for almost every purpose. Major Darwin's suggestions

"include changes with regard to concessions, which should be granted without a named limit of years, but including the right of purchase by Local Authorities at all times on such terms as will not throttle private enterprise; restrictions on the power of veto of private enterprise now exercised by municipalities; wide powers of inspection by municipalities of all the affairs of companies receiving such municipal concessions; and the appointment of an independent and technical commission to decide any questions that may arise between the Local Authorities who represent the citizens, and the companies managing monopolies in their districts."

We have been able to do little more than state the conclusions reached in this treatise. But, as we have said, its peculiar excellence consists in the logical perfection with which these conclusions are established. The argument is, in the main, unanswerable. No one guided solely by reason can read this impartial examination of the problem of Municipal Trade without concurring with the opinions of the author. Emotion and prejudice, however, now so strongly favor socialistic experiments as to make it improbable that a treatise of this kind will receive much attention from the public. Those who derive intellectual enjoyment from ratiocination applied to practical matters, will be richly repaid for time spent in reading this book.

Rome and the Renaissance: The Pontificate of Julius II. From the French of Julian Klaczko. (Authorized translation by John Dennie.) G. P. Putnam's Sons. 1903.

Klaczko's essays are full of interest, not only on account of the grace and brilliancy of his manner of treating history and the vivacity of his style (which is recognizable even in translation), but for the immense suggestiveness of his ideas and the light they shed on disputable problems of the time they treat of. He is a great lover of Rome, he has lived there long and often, and has studied her treasures by all available documentary evidence, and, better still, by his own observation and critical powers, which are of no mean order. Some of his theories are astonishing enough to excite a healthy degree of antagonism in his readers, and to require mature deliberation before any decision as to their permanent value can be arrived at; but Klaczko is never dull: he has the gift of telling a story well, and creating the atmosphere of the people of whom he writes.

The volume begins with an essay on Melozzo da Forli's fresco in the Vatican Pinacoteca—"that great page of history as well as a great page of painting," according to our author. It represents Sixtus IV., founder of the Vatican Library, giving audience to Platina, who receives kneeling his investiture as Librarian, and is pointing to some verses in elegant Latin at the bottom of the frame celebrating the works of the Rovere. The Pope is seated like a sovereign, surrounded by great dignitaries of the Church, all young, and all his very near relations. Most prominent in the composition is Giuliano della Rovere, Cardinal of San Pietro in Vincoli, who, after exile and other vicissitudes, became Pope Julius II., the famous patron of art. Then follows the story of a tomb, concerning that wondrous resting-place which Julius II. commanded Michelangelo to design for him. Old St. Peter's Church was ruthlessly torn down to make room for it and in order that the new Basilica should be high enough to contain this splendid monument to a pontiff who had begun his career in the Church as a follower of St. Francis. Michelangelo suffered much from the procrastination and loss of time over the carrying out of this design, which was finally abandoned, the Pope losing his interest in this personal matter while occupied with the greater issue of building for the Catholic world a temple of unprecedented grandeur. Klaczko gives us a very clear description of the old Basilica of St. Peter's, with the ceremony of the Pope laying the foundations of the new church.

Another essay relates all that is known of the statue of Julius II. which Michelangelo was commissioned to execute for the façade of San Petronio at Bologna, to celebrate the recovery of that city by the Holy See, and of which there exists neither drawing nor engraving, nor even any intelligent description. We are told that on the 21st of February, 1508, "at the hour recognized as propitious by astrologers," the statue of Julius II. was lifted to its niche over the portal of San Petronio to the sound of drums, trumpets, and bells. The Bolognese, however, revolted, three years later, and, with the help of the French, got back their Bentivogli rulers. The Maréchal Fleuranges relates:

"In the city of Boulone over the portal of the church, on high, a pope all in massive copper, which Pope Julius had caused to be made, which was as large as a giant, and could be seen from a great distance. The Bentivolles, having a spite at it, put ropes round its neck, and, by strength of men, pulled it down, and broke the neck of it. Then incontinent the Sieur de Bentivolle had it melted, made a double cannon of it, and in six days fired it at the castle."

Fleuranges writes as an eye-witness, but Bolognese chroniclers aver that it was not till many months after the taking of the castle that the statue was destroyed, on December 30, 1511. The fragments were sent to Alfonso, Duke of Ferrara, who made cannon of them. Thus perished the only bronze statue by Michelangelo, and it is noteworthy that although it cost him three years of hard work and he was constantly lamenting "the tragedy of the tomb," which he called also the tragedy of his life, he rarely referred to this statue, no sooner completed than destroyed. It would seem that he took little interest in it.

Klaczko's belief that Michelangelo's Christ in the Pietà, now in St. Peter's, but originally executed for the French Ambassador at Rome, the Cardinal Jean Villiers de la Groslaie, was inspired directly as to its type and execution by the Apollo Belvedere, will not be generally accepted. The Apollo was discovered at Grotto Ferrata in a property belonging to Giuliano della Rovere some years before Michelangelo's first stay in Rome, and stood at that time in the garden of the Cardinal's house at S. Pietro in Vincoli, and was considered one of the masterpieces of classic art by all the connoisseurs of that art-loving moment. But the Apollo Belvedere is no longer in fashion, and the present age shrugs its shoulders at a statue which Renaissance artists held as perfect; criticising its academic pose and sleekness of execution,

while Michelangelo's Pietà still holds a high place in general appreciation. Klaczko points out how entirely the great Florentine left out in this work all the painful characteristics suggested by the subject and so emphasized by the earlier sculptors of the quattrocento; how he sought only to express beauty of form, feature, and expression, without even suggesting the rigidity of death in the Christ, while the Madonna's face is youthful and full of tenderness and love—the only note of agony being in the gesture of her left hand, that seems to call Heaven to witness her grief. He sees in the form of the Christ great similarity of type to the virile beauty of the Apollo, as also in the treatment of detail and surface. This similarity seems so clear to him that he can account for its not having been remarked by earlier writers only because the date of the finding of the Belvedere statue has not been long certified to have been before Michelangelo's stay in Rome. Klaczko sees in the four religious sculptures of Buonarroti, the Pietà, the Madonna of Bruges, and the two reliefs of the Bargello and the National Gallery, the immediate influence of the great statues of antiquity, and the lofty conception of an ideal humanity in which the three principles of the colossal, the impassioned, and the nude prevail. All his work from that time on bears the impress of this influence.

The volume contains interesting accounts of Raphael's work in the Vatican, Michelangelo's in the Sistine, and the history of the time up to the death of Julius II. The illustrations are good and well chosen for reference, and the translation is satisfactory.

The Art of the Pitti Palace. By Julia de Wolf Addison. Illustrated. Boston: L. C. Page & Co. 1903.

This is one of a series of illustrated guide-books to the art galleries of Europe. It fulfils its purpose adequately, being of a convenient size to carry about, and containing all that is essential for a visitor to know about the contents of the gallery, both from an historical and a critical point of view. The opinions of art writers are liberally quoted, from Vasari to Berenson, and the lives of the painters are given briefly, as also the legends and anecdotes connected with the paintings and other works of art.

The first chapter tells the history of the Palace itself and of its founder, Luca Pitti, the man whom Guicciardini calls "the first citizen of Florence." He was prior, gonfalonier, ambassador to Rome, ambassador to the Sforza at Milan, besides being occupied in business ventures of magnitude for the times he lived in; he is said on one occasion to have sent ten trading vessels to England, Constantinople, and Barbary, and this enterprise alone enriched the state above the amount of one hundred thousand florins. His popularity was beyond question, and this fired Luca Pitti's ambition to aim at the highest power and overthrow the Medici, who looked upon him as a friend and adherent. From 1458 to the death of Cosimo the supremacy of Luca Pitti was unquestionable in affairs of state, and his régime was one of unmerciful taxation, which he used to serve his own ends.

He had already set about building himself a palace which should in magnificence surpass those then existing in Florence. He had chosen a splendid position on a hillside, and in 1440 intrusted the design to Brunelleschi, the architect of the dome of the cathedral. Brunelleschi is not responsible for the palace as it now stands, for his original design was carried out only to the second story when he died. Prof. Cosimo Conti has been able to define what Brunelleschi's intentions were, by means of a plan of the building in the Uffizi, and a painting of Alessandro Allori's in Santo Spirito, in which the façade of the Pitti Palace appears in the background, as again in the portrait of a lady of that family. These prove that there were three central arches in the basement, with seven windows on the second floor. An open loggia above is seen in Brunelleschi's sketch. The proportions have been entirely changed by subsequent architects. Bartolommeo Ammanati, about 1568, added the whole *cortile* and garden front and the wings to the second floor; he also changed the ground floor, which, like all fortress structures, was solid, by introducing round-arched windows to relieve the gloom. But these changes came about after the fall of Luca Pitti, who, lured by Pietro de' Medici's simulated friendship and the negotiations of a marriage between Luca's daughter and Lorenzo de' Medici, was off his guard and allowed himself to be voted out of power by the same method of a "Parlamento" he had used to get his supremacy.

Pitti's ultimate fate is unknown, and his grandson, Buonacorsi, was obliged in 1549, for want of means, to sell the palace to Duke Cosimo I. de' Medici, who bought it with its gardens, orchard, and farms for his wife, Eleanor of Toledo. During his occupation of the palace he began the collection of art treasures, which was greatly increased by his successors. The Grand Duke Ferdinand II., by marrying his cousin, the Princess Vittoria della Rovere, endowed the gallery with the great collection of the Duke Federigo of Urbino, her father, giving also Duke Cosimo II. his own father's collection, which had hitherto hung in the Uffizi. After the Medici had become extinct and the Grand Duchy of Tuscany had come into the hands of Francis II. of Lorraine, twenty of the large rooms in the Pitti were filled with pictures, and it became a recognized gallery about 1798. Sixty-three of the best works were sent to Paris by order of Napoleon, but fifty-six of these were returned in 1815. It was in 1833 that the last Grand Duke Leopold II. opened the gallery to the public.

Our author tells us that, at the wedding of Cosimo First's daughter Lucrezia to Alfonso d'Este, the first drama with music, by Francesco Corteccia, was performed at the Pitti. Again, in 1600, when Maria de' Medici married Henry IV. of France, "Euridice," written by Octavio Rinuccini and composed by Jacopo Peri, the recognized beginning of Italian opera in which the recitative was introduced, was performed; so that the Pitti is not without musical associations.

The book is well illustrated.

Poems of Dante Gabriel Rossetti. With illustrations from his own designs. Edited by Elizabeth Luther Cary. In two volumes. G. P. Putnam's Sons. 1903.

The House of Life: A Sonnet Sequence. By Dante Gabriel Rossetti. Boston: H. M. Caldwell & Co.

Miss Cary's edition of Rossetti has many points which will commend themselves to the poet's ever-widening circle of admirers. The idea of illustrating the book with reproductions of Rossetti's own drawings and pictures is a good one, although frequently the pictures have no connection with the poem beside which they are placed. Both poems and pictures bear the date of their completion, and if there is any interesting information concerning when and where and how the poems were written, Miss Cary gives it in notes before each. In many cases, when the poems appeared first in the shortlived Preraphaelite periodical, the *Germ*, Miss Cary gives the earlier version in smaller print and afterwards in the form Rossetti decided should be final. He had the habit of ever seeking more felicitous expression, and it is interesting to compare the emendations which time and thought evolved with the original inspiration.

Miss Cary, in her preface, discusses the well-worn theme whether Rossetti was better equipped to be a painter or a poet. She seems to think his choice of painting as a profession was influenced chiefly by the difficulty of earning a living by poetry. Leigh Hunt, when consulted, had replied that poetry "is not a thing for a man to live upon while he is in the flesh, however immortal it may render him in spirit." On the other hand, Rossetti's picture, when having the same subject as the poem, often conveys the intensity of his meaning far more convincingly than the poem does. Miss Cary declares that one can understand Rossetti adequately only by studying pictures and poems side by side; but she also recognizes the impossibility of conveying in reproductions anything but the design and general arrangement, while the emotion produced by the deep chord of color in the pictures is not transmittible when they are reduced to monochrome. Miss Cary has also sought to furnish the reader with a "more satisfactory mental picture" of the artist's identity, by quoting amply from his own letters. She says: "Nothing he has painted or written for the general public suggests that frank, infectious laughter, that incisive speech akin to wit, that ready generosity of mood, by which he was known within his circle."

The poems are arranged according to the date at which they were written. The typography, wide margins, and plain green-cloth binding, form a suitable presentment, and the illustrations, though rather too black in some cases, are fairly satisfactory.

The elaborately decorated edition of Rossetti's 'House of Life' is a sad travesty of the Kelmscott Press. The type is good, as also the initial letters of each sonnet; but the floral frames encircling the two pages are neither well designed nor effective in black and white; while the frontispiece, a pastoral "lover and his lass," is quite out of keeping with the archaic style of decoration of the volume.

The Forest. By Stewart Edward White, Author of 'The Blazed Trail,' etc. Illustrated by Thomas Fogarty. New York: The Outlook Co. 1903.

There are those to whom the forest means little but mosquitoes, burs, cobwebs, and other agents of physical discomfort; there are those again to whom its shadows and

its silence bring unendurable mental depression; still others who look to it merely as the theatre for the use of the rod and gun; and again there are some whose natures are so attuned to its essential characteristics that they love it for itself, enjoy its companionship, and find in it a source of mental and spiritual inspiration. Such, by the ample evidence of the book before us, is Stewart Edward White. Going into the woods does not mean to him a two weeks' camping party within easy reach of some railway station, where fresh eggs and milk and butter may be delivered daily from a neighboring farm-house. He takes the forest on its own terms, plunges so far into its depths that only long days of steady tramping can put him again into communication even with the outposts of civilization, and carries with him just as few of the inventions of civilized society as he can safely get along with. After you have been out on one forest trip, he tells you, empty your "duffel-bag" upon the floor and sort the contents into three piles. Into the first put what you have used every day; the second will contain what you used only occasionally, and the third what you did not use at all. When you go again, leave the last two piles at home. Even a coat he has come to regard as a needless encumbrance, since an extra sweater is more easily carried, more comfortable, and more serviceable. The present volume deals with the Canadian country north of Lake Superior; but, as the reader gets well into it, questions of geography or of any other science cease to concern him. If he is not capable of enjoying "the forest" rather than any particular forest, this book is not for him. Few of Mr. White's descriptions are such as would with no other data enable one easily to identify the places.

As the eye strikes the heading of chapter ix., "On Flies," one naturally expects the usual wise discourse on Jock Scotts, Dusty Millers, Parmachene Belles, and all the rest, and is surprised to find that it is deer-flies, black flies, midges, and mosquitoes instead. These have to be reckoned with, after all, even by the most enthusiastic forest lover, and Mr. White gives very helpful suggestions growing out of his own experience as to the best methods of reducing the nuisance to its lowest terms. We shall find here none of Tolstoy's philosophy in 'The Cossacks,' when painting Olyenin hunting in the woods along the Terek:

"Myriads of midges literally covered his face, his back, and his hands. . . . He started to go home, but, remembering that men live through such things, he resolutely made up his mind to put up with it, and allowed the gnats to devour him. And, strangely enough, towards noon that sensation began to be agreeable to him. It even seemed to him that if that atmosphere of gnats surrounding him on all sides, that paste of gnats which rolled up as he passed his hand over his face, and that intolerable itching over his whole body were absent, then the forest there would have lost for him its character and its charm."

Two chapters appeal especially to the angler, one on "The 'Lunge" and the other on "The Catching of a Certain Fish," which, of course, means the trout. The latter is evidently Mr. White's prime favorite among the trophies of the water, and such would doubtless be the case with all of us if trout of the size which he describes had not been pushed back into such remote regions as to be beyond the average angler's time and means. Mr. White has just recently had a word to say about reviewers who jump with both feet upon errors comparatively as insignificant as "a violet in a caucus of polecats," but we cannot avoid putting at least one foot down gently upon a point in his "'lunge" story. The 'lunge in question got away, and an examination is reported to have shown that "that thick brass wire had been as cleanly bitten through as though it had been cut with clippers." There are other ways by which the wire could have been parted, and Mr. White would do well to consider closely the relative hardness of the two substances involved before settling down permanently to the conviction that it was bitten through.

Not the least interesting chapters of the volume are those which deal with the "woods Indians," those far-away remnants of the race who have come so little into contact with white men that the original instincts, modes of thought and action of the native American remain in them relatively unimpaired. As but few of his readers are likely to be woodsmen, Mr. White should have been more careful always to explain the technical terms of the craft, when he found it necessary to use them.

The mechanical execution of the book, which the author appropriately dedicates to "Billy," his half-breed guide, is the fine work of the Riverside Press.

Le Travail du Style enseigné par les corrections manuscrites des grands écrivains. Par Antoine Albalat. Paris: Armand Colin. 1903.

M. Albalat returns to the task of teaching the art of writing, in a third book which adds little to the canons he has already established, but possesses a curious interest from its comparison of the methods of various French writers. His aim is to prove by example the necessity of critical, even toilsome revision, and he takes up successively the authors most addicted to it, discusses one instance of futile revision applied to a style not to be recommended (though classic, and taught as such in the schools), and ends with fluent and prolific writers who were satisfied substantially with their first draft. Such an exhibition as this required a labor scarcely inferior to that held up for admiration, and involved the examination of whole volumes of erased and tortured manuscript, reaching, in the case of Flaubert's 'Madame Bovary,' sometimes to the sixth recasting of a considerable passage.

Forty-five pages are devoted to parallels from Chateaubriand, pronounced the greatest prose writer of the nineteenth century. Flaubert succeeds, with thirty pages, and M. Albalat has to admit that this novelist carried revision to an extent which left him sterile and dried-up at last. Extant manuscripts of Rousseau's 'Nouvelle Héloïs,' compared with the printed page, make an examination of the leading eighteenth-century prose-writer's work-shop easy. Hugo labored over his manuscripts, but was indifferent to the printer's proofs, whereas Balzac's ardor of perfection was wreaked mainly upon these, and, as M. Albalat bears witness, with no perceptible improvement in the last correction over the original form. Our author's opinion of Fénelon and George Sand is well known. He declares useless and wasted all the modifications bestowed on 'Télémaque,' since a silk purse cannot be made out of a sow's ear; and George Sand's limpid flow produces monotony and forbids recurrence to her works. Nevertheless, he has the candor to quote from her (at p. 285), with approval, her friendly admonition to Flaubert to abandon thinking of form as an end in itself: "it is only an effect." This is really a criticism upon M. Albalat's manuals, and it repeats itself when he comes to Stendhal (who predicted that Chateaubriand would cease to be read in 1913), and asks how we are to justify his reputation in view of his want of critical sense, satisfaction with his first draft, and poor vocabulary; in view, moreover, of his having created one imperishable work, 'Rouge et Noir,' and his being the literary father of Tolstoy.

M. Albalat's answer is that Stendhal's substance surpasses his form; which is the same as saying that genius transcends rules and can dispense with the patience which Buffon associates with it in his famous definition. This agrees with what M. Albalat himself says at the very outset (p. 11): "It is useless to counsel the mediocre writer to take pains; he will not get far. The good writer alone will correct, but he will always see what escapes others." Yet we are gravely told on page 104 of Bossuet's letter to the Cardinal de Bouillon, in which he explains "comment on arrivait à 'former' son style *et avoir du talent* [italics ours]." There is an instructive remark attributed to the poet Heredia, that "his most complicated sonnets are those which cost him the least trouble, while he remade eight or ten times those which seem the most simply written." Yet some of the latter might well have been produced with as little travail as the former. To the fact that they were not, we can only reply, in homely phrase, "Some pork will boil so," while asking whether the labored sonnets are invariably the better. M. Albalat is inclined to suspect revision where the evidence is wanting, as in the case of Pascal's 'Pensées,' which have all the air of *premier jet;* Pascal must, he explains, have worked them over in his head before committing them to paper. No doubt; it is one of the processes of thought in all stages, from genius down. With those who do not think in advance, phraseology and ideas change between pen-strokes.

To sum up, there is comparatively little discipline for the inexperienced writer in these pages, so far as the illustrations are concerned. But the work as a whole will repay reading on account of its characterizations of a great number of distinguished writers (Flaubert above all), its discussions by the way, its anecdotes, its bibliographic references in footnotes, its citations of theories of style and literary production. One might think the author's store now exhausted; but he announces still another volume as in preparation.

Appleton's New Spanish-English and English-Spanish Dictionary. (Successor to Velázquez's Abridged Dictionary.) By Arturo Cuyás. D. Appleton & Co. 1903.

It is not surprising to find in this new dictionary "4,000 modern words and 2,000 acceptations, idioms, and technical terms not in the latest edition of any similar

work." The dictionary of the Royal Spanish Academy has been taken for a basis, and, excepting archaic forms, practically every word contained in that immense compilation is here embodied. Of course, with regard to definitions and examples of the meanings of words the Academy's dictionary is in a class by itself. Nevertheless, the claims for the new publication seem not over high. While Velázquez was good in his day, and in many respects advanced the work of his predecessor Seoane, he fell into some of the pitfalls of the lexicographer. Señor Cuyás has avoided many of these, and has made a compilation showing a marked improvement over that of Velázquez, which it is designed to replace.

In the matter of pronunciation, excepting in a few cases, no attempt is made to pronounce Spanish words. A well-defined set of rules prefaces the book, and this is supplemented by an explanatory key placed at the bottom of each page which renders possible an approximate pronunciation of each word. In the English-Spanish division, however, because of the inherent difficulties of the English pronunciation, each word has been marked for the Spanish enquirer, and the scheme employed seems quite satisfactory. No explanation has been made of the sharp differences in pronunciation which exist in the language as spoken in the Iberian peninsula and in Spanish-America. In the New World the *c* before weak vowels (as in *cielo*) has a tone value of *s;* and the *z* before strong vowels (as in *corazon*) has a totally different value from the Castilian. Besides these and other distinctions (such as in the case of *ll*), it would have been a fine stroke to give those words which are peculiarly American the pronunciation they bear in their own country. The 'New International Encyclopædia' has made this discrimination to a limited extent, and it is to be hoped that others will continue it.

Señor Cuyás has gone to the extreme of almost wholly avoiding long definitions, adopting the plan of equivalents instead. Here a danger lies in the possibility of defining one term by another whose meaning may be obscured or as little known as the foreign word itself. This is specially likely to occur with obsolescent words and in the technical sciences. It may be replied that for the expert there will arise no difficulty. Dictionaries, however, are not made exclusively for experts. To illustrate this, let us take the neologism *radium.* It is marked a chemical term, and its Spanish equivalent is given as *radio.* Turning to *radio* we find that it is defined as "radius of a circle; circuit, district; (anat.) radius." In this instance not only is there failure to provide a definition of radium, but there is the added sin of omitting to list it with the equivalents under *radio.* In general, we remark, not enough regard has been paid to the coördination of the two departments. Words are occasionally left in the air. For example: *chicotear* is not mentioned as an equivalent under *whip,* though *whip* is given under *chicotear.* Some definitions are strained. *Disingenuous* hardly means by several shades of blackness "doble, falso." And surely *corsarios* much better expresses the sense of *buccaneers* than *filibusteros.* On account of space exigencies, too, some definitions have been curtailed.

By cataloguing a vast number of new terms which have enriched the language in the Philippines and Spanish-America, Señor Cuyás (who in this respect had a distinguished predecessor in Salvá) has rendered a distinct service. If one wishes a contrast, let him turn to Ochoa's 'Novísimo Diccionario de la Lengua Castellana' (1893). There one finds few of the words which are current throughout the Spanish-American world, yet this was to ignore the growth of the language in a quarter where it shows exceptional vitality.

A feature of this dictionary to be commended is the fulness of the treatment of such words as *á, con, que,* etc. Under the last, twenty-three examples are given of varied use. With the infinitive of irregular verbs, the fundamental tenses from which the other modes are formed are given. We find, on turning to *querer:* "(ind. *quiero;* pret. *quise;* fut. *querré;* subj. *quiera*)." Definitions with examples follow. Looking further, we discover that even *quiero* appears in its alphabetical place, and under it *quiera, quise.* This is a great saving of time. The diacritical marking has been done with care. Señor Cuyás is to be heartily congratulated on the completion of this serious work. For compactness, completeness, and general excellence it has no rival.

Four Years under Marse Robert. By Robert Stiles, Major of Artillery in the Army of Northern Virginia. New York and Washington: The Neale Publishing Co. 1903.

This readable narrative has an abundance of stirring incidents, now amusing, now tragic, of the heroic resistance against the armies of the Union maintained by the Confederates in Virginia from 1861 to 1865. As might be inferred, the story is largely of personal reminiscence, and is one of a large class which throw a stronger light upon the motives of the secession movement among the rank and file of the South than do most of the grave discussions of the Constitutional reasons for the civil war. While the critical world will still believe that the South attempted secession because of its devotion to slavery—partly through a false political economy, and partly because its sagacious leaders perceived that their conceptions of republican principles were in irreconcilable antagonism to those which were steadily resuming control of the national legislation—our author accounts for the ardor with which he and his Virginia neighbors enlisted for war, when some of them had recently been strenuous opponents of the doctrine of secession, by their indignation against the invasion of their homes by the army of the Union. The essentially distinctive spirit of the Southern volunteer, so he declares, was his determination "to defend his own hearthstone." This is, quite likely, as good a reason as young men can generally give for their readiness to seek hazardous ventures. War especially has always been invested with an air of romance, no matter for what cause it was waged, even when it invited many an eager spirit to engage in the numerous filibustering expeditions which, in the years close upon the civil war, the South stealthily sent to the West Indies and Central America, and which a sober afterthought can scarcely justify as inspired by zeal for human liberty and justice. Fighting for one's hearthstone covers a multitude of sins; but since the South had been long preparing for war, by drilling its men and laying up stores of arms, and made the first assault upon the national authority, the vicinity of the hearthstone was a well-stocked arsenal.

The old Southern legends of the comparative numbers of Confederate troops in the critical battles are still maintained by Major Stiles; as when he quotes Southern authorities, whose figures have often been shown to be random guesses or careless calculations, to prove that Antietam was fought by 35,000 Confederates against nearly 90,000 Union men. The probability is that the men who came into actual conflict at Antietam were numerically about the same on each side, although McClellan had some 20,000 more in reserve. The Southern way, which Northern generals hardly ever employed, was to put every man into action, and this explains why the inferior Confederate forces were so steadily successful.

The tenderness with which McClellan is spoken of in this book is a curious instance of the extent to which the Southern judgment was long influenced by the supposed political sympathy with slavery, or at least hostility to any interference with it, on the part of certain Union generals. When we consider the inadequate use of magnificent opportunities made by McClellan, some other motive than admiration of his military skill must be sought in the almost constant praise bestowed upon him in Southern memorials of the war.

Among the Great Masters of the Drama. By Walter Rowlands. Boston: Dana Estes & Co. 1903.

This is an attractive little book to look at, well made, well printed, and profusely illustrated with reproductions of well-known pictures or portraits; which might serve to beguile an idle half-hour in a waiting room, but offers nothing of value to any moderately well-informed person. It contains absolutely nothing in the way of original research or opinion, but is compounded of brief extracts from writers of more or less authority and from anonymous effusions in the daily press, referring to the subject nominally under discussion, and these are selected with very little discretion, although it is only fair to say that Mr. Rowlands appears to have read pretty widely in search of them. His treatment of Voltaire is a fair example of his methods of book-making. Eight of his very lean pages are devoted to this genius, and seven of them are devoted to Carlyle's account of Voltaire's arrest by order of Frederick the Great to explain Girardet's picture of the incident. Part of the remaining page is occupied by a biographical note of the painter. Shakspere, Molière, and thirty actors, ranging from David Garrick to Mary Anderson, are disposed of in equally summary fashion. Of many master dramatists and almost equally famous players no mention whatever is made. Mr. Rowlands can find room for Edwin Forrest, John McCullough, and Mary Anderson, but none for E. L. Davenport or for Quinn, Samuel Phelps, Marlowe, Congreve, or Sheridan. But other omissions are yet more fantastic. The chapter on Sir Henry Irving, for instance, says not a word about his *Mathias, Hamlet,* or *Shylock,* but only gives a eulogy on his

Dr. Primrose, by (of all persons in the world) Mr. Clement Scott. Some of the portraits are very good, notably those of Rachel, Edmund Kean, Mrs. Abington, and Macready, and none the worse for being familiar.

LEONARD SCOTT PUBLICATION CO., 7 Warren Street, New York

LONGMANS, GREEN, & CO.'S NEW BOOKS

The American Revolution

PART II

By the Right Hon. Sir GEORGE TREVELYAN, Bart. Author of "The Life and Letters of Lord Macaulay"; "The Early History of Charles James Fox," etc., etc. In two volumes. 8vo. Pages ix-344—xi-353. With three Maps. $5.00 *net*. Postage or expressage extra.

" . . . Trevelyan is typical of what is, in a sense at least, the ideal historian; that is, he has intimate knowledge of the things of which he writes, and a philosophic insight, and he possesses also a gracefulness and a strength of style that awaken and sustain interest in what he has to say. His critical sense is penetrating, and his sense of narrative is admirable. His temper is judicial, and the tone of his writing eminently fair. In this latest work of his both of these qualities are refreshingly illustrated. The two volumes which have just been published . . . will be not only interesting, but instructive to Americans and to Englishmen alike."—*Public Ledger, Philadelphia, Pa.*

Historical Lectures and Addresses

By MANDELL CREIGHTON, D.D., D.C.L., LL.D., &c., sometime Bishop of London. Edited by LOUISE CREIGHTON. Crown 8vo, $2.00.

Bacteria in Daily Life

By Mrs. PERCY FRANKLAND, F.R.M.S. Crown 8vo, pages vi-216, *net*, $1.75. Postage additional.

The hygienic applications of Bacteriology in regard to water, milk, air, disease and agriculture are some of the questions discussed by the light of the latest investigations which have been made in these directions. The author has endeavored to deal with the subject in a manner both intelligible and interesting to non-scientific people, while sacrificing nothing to secure accuracy in regard to the facts brought forward.

The Political Theories

OF THE ANCIENT WORLD

By WESTEL WOODBURY WILLOUGHBY, Ph.D., Associate Professor of Political Science in the Johns Hopkins University; author of "The Nature and the State," "Social Justice," "The Rights and Duties of American Citizenship," etc. Crown 8vo, $2.00.

Three Frenchmen in Bengal;

or, The Commercial Ruin of the French Settlements in 1757

By S. C. HILL, B.A.B.Sc., Officer in Charge of the Records of the Government of India. With four Maps and Plans. 8vo, $3.00.

This account of the loss of the French Settlements in Bengal has been composed almost entirely from hitherto unpublished documents, and the author's object has been to make something like a picture of Bengal as it appeared to the French when Clive arrived there. The "Three Frenchmen" were M. Renault, Chief of Chandernagore; M. Law, Chief of Cossimbazar; and M. Courtin, Chief of Dacca.

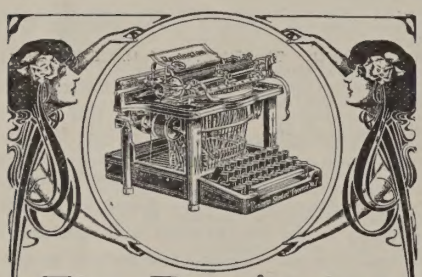
HANDBOOKS FOR THE CLERGY—NEW VOLUME

The Study of Ecclesiastical History

By the Rev. W. E. COLLINS, M.A., Professor of Ecclesiastical History in King's College, London, and Chairman of the Church Historical Society. 90 cents *net*. By mail 96 cents.

The purpose of the writers of the volumes of this series will be to present in a clear and attractive way the responsibilities and opportunities of the Clergy of to-day, and to offer such practical guidance, in regard both to aims and to methods, as experience may have shown to be valuable.

LONGMANS, GREEN, & CO., 93 Fifth Avenue, New York



The Remington Typewriter

represents the result of more study, more effort, more labor and more practical experience in typewriter manufacture than all other makes of writing machines combined.

It ought to be the best and IT IS.

UNANIMOUS

NORTH

"There is not a page in the book which bears the stamp of prejudice, not a sentiment which can offend any honest man. It is a big, brainy, full-blooded, manly American story, passionately thrilled with a high spirit of American hopefulness."—*St. Paul Despatch.*

WEST

"Much of his story is more interesting than any novel."—*Arizona Republican.*

"His abounding good will to all sections of the country unite in giving a personal character to this volume which is to be found in few of the records of the civil war."—*Omaha (Neb.) Bee.*

"Written in the distinctively American spirit."—*San Francisco Chronicle.*

GENERAL GORDON'S
REMINISCENCES
OF THE CIVIL WAR

With Portrait, $3.00 net.
(Postage 23 cents.)

EAST

"His battle scenes are living pictures; his compact force of statement is remarkable."—*Boston Daily Advertiser.*

"Valuable not only because the writer has had it in his power to furnish a great deal of first-hand testimony concerning important events and distinguished commanders, but because the trustworthiness of the narrative is guaranteed by the admirable spirit that pervades it."—*The N. Y. Sun.*

SOUTH

"Interesting from cover to cover."—*Louisville Evening Post.*

"Altogether the most remarkable war book yet produced."—*Savannah (Ga.) Morning News.*

"General Gordon's battle pictures are grand from their very simplicity. They are all there—the long roll of conflicts that made the names Federal and Confederate immortal as synonyms for the bravest soldiers that ever dared death."—*Nashville American.*

Ready at Last

Dr. SVEN HEDIN'S
CENTRAL ASIA AND TIBET
Toward the Holy City of Lassa

Published Simultaneously as follows:

AMERICA	Charles Scribner's Sons	New York
GERMANY	F. A. Brockhaus	Leipzig
FRANCE	Felix Juven	Paris
RUSSIA	A. Devrien	St. Petersburg
ITALY	Ulrico Hoepli	Milan
HUNGARY	F. Wodianer & Sons	Budapest
SWEDEN	Albert Bonnier	Stockholm
NORWAY and DENMARK	Alb. Cammermeyer.	Christiania
BOHEMIA	Jos. R. Vilimek	Prague
AUSTRALASIA	G. Robertson & Co., Proprietary, Ltd.	Melbourne
GREAT BRITAIN	Hurst and Blackett, Ltd.	London

THIS book, one of the most important works of exploration and discovery for many years, is the first adequate description of Dr. Hedin's remarkable expedition and its accomplishments, an expedition so rich in adventure, as well as solid achievement, that he has been called, by the London press, "the modern knighterrant of science." The work has, in fact, much of the quality of a tale of adventure, while it embodies scientific facts and investigations of the utmost importance, including Prof. Himly's readings of the ancient MSS. discovered.

Author of "Through Asia." With eight illustrations in color, 16 drawings by distinguished artists, 400 photographs and four maps.

The Story *of* a Soldier's Life

By Field Marshal WOLSELEY. Two volumes $8.00 *net.*

THIS soldier's life story, told by himself, is not only a work of much historic value, but a stirring tale as well, a piece of martial autobiography of very genuine interest. It is the sort of book, in a word, that interests a man because he is a man, wholly apart from whether he is, also, a student or a lover of history.

Lord Wolseley was Field Marshal because he was first a soldier and won his promotions by fighting for them. Once, during the great mutiny, wearied in battle, he slept soundly over night among the dead in the field. It was he who led the advance in Colin Campbell's relief of Lucknow. It was he who stormed the Toka forts in the Chinese war of 1860. He put down the Riel Rebellion after a march of 800 miles through the Canadian wilderness. He conducted the Ashantee war.

Some of the Events in the Career of Lord Wolseley

The Burmese War of 1852-3
The Crimean War
The Great Mutiny and the Relief of Lucknow
The Oudh Campaign under Sir Hope Grant
The Chinese War of 1860
Sir Hope Grant's Expedition to Japan
The Mission to the Tai-Ping Rebels in China
The Expedition to Canada to watch the American War
The Visit to the Southern Confederacy
Fenian Campaigns to Niagara and the Welland Canal
The Riel Rebellion
The Reformation of the War Office, London
The Ashantee War

Also Freedom and Responsibility

By ARTHUR TWINING HADLEY, President of Yale University

12mo, $1.00 net. (Postage 11 cents.)

THIS important book, the full title of which is "The Relations Between Freedom and Responsibility in Democratic Communities," traces the history of democracy in its wider as well as its narrower aspects; not merely as a form of government, but as a phase of national character. It is a remarkable fact that in every stage of the development of democracy freedom and responsibility go hand in hand. Only by understanding the historical connection between the two we can judge intelligently of theories of law or schemes of social reform as applied to the problems of the day.

Also From Saranac to Marquesas and Beyond

Being letters written by Robert Louis Stevenson's mother during 1887-8 to her sister, Miss Jane Whyte Balfour

Edited by MARIE CLOTHILDE BALFOUR. 12mo, $2.00 net

THE writer of these letters was the mother of Robert Louis Stevenson and the period of their writing covers a trip abroad with him. There is much of Stevenson in them, and a frank and pleasing revelation of the mother from whom he inherited many of his finest qualities.

Mary King Waddington's

LETTERS OF A DIPLOMAT'S WIFE

Just Published

The Creevey Papers

A Selection from the Diaries and Correspondence of Thomas Creevey (1768-1838)

Sometime M. P. for Thetford, and afterwards for Appleby; Secretary to the Board of Control, etc., dealing with all the principal events and characters, social and political, from the close of the 18th century to 1838.
FROM FAMILY PAPERS HITHERTO UNPUBLISHED.

Edited by the Rt. Hon. Sir HERBERT MAXWELL, Bart., M.P.

Author of "The Life of the Duke of Wellington," etc. With Portraits. 2 vols. 8vo. $8.00 net.

This book may be regarded as a companion to the Greville Memoirs and the Croker Papers. It will probably prove to be not inferior in interest to either of these works, and dealing with the same topics as Croker handled, but from the opposite side in politics.

The Book of Italian Travel

By H. NEVILLE MAUGHAM, 1580-1900. 8vo, flexible leather. $3.00 net.

This volume will be of the greatest interest to all who have travelled in Italy, and all who are about to do so. It is a collection of what has been said about Italy by famous travellers during the last three centuries.

Sixteen Years in Siberia

The Experiences of a Russian Revolutionist

By LEO DEUTSCH. Translated and Edited by Helen Chisholm. With portraits and other illustrations. $4.00 net.

The author relates his experiences in vivid detail, and recounts the doings of Russian revolutionists, the tragic events of prison-life, both for men and women, and the drastic methods of the Russian Government in suppressing freedom of thought and speech.

The Great French Painters

And the Evolution of French Art 1830-1900

With One Hundred and Ten illustrations. By CAMILLE MAUCLAIR, author of "The French Impressionists." 4to, $7.00 net.

Mr. Camille Mauclair has aimed at giving his English readers a clear idea of the history and tendencies of French art in the nineteenth century, of the rise of the various Schools, and of the chief work of the Great Masters of the period.

The Autobiography of Leigh Hunt

With Introduction by Thornton Hunt. Newly edited by R. INGPEN, and illustrated with photogravure portraits. Two vols., 8vo, vellum, $7.50 net. (Express 25 cents.)

It was Carlyle who said of these memoirs: "I call this an excellent good book, by far the best of the autobiographic kind I remember to have read in the English language; and, indeed, except it be Boswell's 'Life of Johnson,' I do not know where we have such a picture drama of a human life as in these three volumes."

Illustrated Holiday Catalogue on application.

The Variorum Edition of Shakespeare

Edited by HORACE HOWARD FURNESS, Ph.D., LL.D., L.H.D.

The monumental work undertaken by Dr. Furness has been received everywhere with high critical approval, and with its extended preface, its various readings, its explanatory and critical notes, its discussion of the merits of the different texts, of the date of composition and of the source of the plots, and its array of English and Continental criticisms and bibliography and alphabetical index, it supplies what is indispensable to the thorough study and intelligent enjoyment of the plays.

"These monumental volumes are the admiration of every true student of Shakespeare," says DR. WILLIAM ALDIS WRIGHT.

The London Athenæum states, "This, the most exhaustive work on Shakespeare's plays, comes from America."

DR. J. W. ROLFE declares of a recent volume, "This, too, like its predecessors, is . . . the entire literature of the subject compressed into a single volume, and the more valuable for the editor's personal contributions thereto."

The thirteen volumes which have so far appeared are:

Macbeth
Revised Edition by HORACE HOWARD FURNESS, JR.

Romeo and Juliet
Othello
King Lear
The Tempest
A Midsummer Night's Dream
As You Like It
The Winter's Tale
Hamlet (two volumes)
Much Ado About Nothing
The Merchant of Venice
Twelfth Night

Royal octavo, gilt top, uncut edges. $4.00, net, per volume. Half morocco, gilt top, $65.00, net. Sold in sets only. Postage, 30 cents extra, per volume.

Publishers J. B. LIPPINCOTT COMPANY Philadelphia

NEW PUBLICATIONS OF

THE ROBERT CLARKE COMPANY

CINCINNATI, OHIO

BARRETT. Abraham Lincoln and His Presidency. By J. H. BARRETT, author of a "Life of Lincoln." 2 vols., crown 8vo, cloth, gilt tops, *net*, $5.00. (Postage 30c.)

It is believed that the Hon. J. H. Barrett's long-expected new life of Lincoln will fill an important place in the list of biographies of this remarkable man, and will prove a notable contribution to the field of American biography and history. He contributes much new and valuable material, including unpublished letters, new anecdotes illustrative of Lincoln's character, and corrects many errors of facts and inferences that have gained general currency.

THE MAN WITH THE HOE. "A story throbbing with the true inwardness of life and love on the farm." By Adam Blake. 12mo, cloth, illustrated, $1.50.

A picture of American farm life as it is to-day told in an attractive way that will interest both old and young. Humor and pathos are interwoven in the story, and around it all is entwined a love story of high literary merit.

TRUE. The cause of the Glacial Period. A book treating of the Greatest Undemonstrated Problem Known to Scientists. By H. L. True, M.D. Cloth, illustrated, *net*, $1.00. (Postage 9c.)

RE-ISSUES!
New and Revised Editions of

THE NEW BOOKS OF GREATEST PERMANENT VALUE

"The best biography of a great man ever written."

Mr. JOHN MORLEY'S **Life of William E. Gladstone**

In three 8vo volumes, with portraits, etc. Cloth, $10.50 net. *Third Edition now ready.*

"A work which is essential to the completeness of every library, and which no man who wishes to understand the English history of the last seventy-five years can afford not to read."—NEW YORK TRIBUNE

ILLUSTRATED BOOKS

Mr. LORADO TAFT **The History of American Sculpture**

Richly illustrated. Cloth, $6.00 *net.*

This work is not merely the first really adequate treatment of the subject, but is the only one illustrated in a manner at all equal to its importance, and also the first of a number of volumes each by a recognized authority, which, taken together under the editorship of Professor JOHN C. VAN DYKE, will cover the whole field of American Art. *Published Last Week.*

Mrs. EARLE'S *new book* **Two Centuries of Costume in America**

Mrs. ALICE MORSE EARLE'S richly illustrated treatment of this neglected subject possesses at once the charm and the authority of her "Home Life in Colonial Days," etc.

Two vols., $5.00 net

Mrs. PRYOR'S *new book* **The Mother of Washington and Her Times**

Mrs. ROGER A. PRYOR'S intimate account of life in early Virginia society is both fascinating and historically valuable. Its many pictures render it a most attractive gift-book.

$2.50 net (postage 20c.)

Sir GILBERT PARKER'S *new book* **Old Quebec**
The Fortress of New France

The author of "Seats of the Mighty," etc., and Mr. CLAUDE G. BRYAN have together succeeded admirably in reproducing through the story of its exciting past the atmosphere of this still quaint old city. *Profusely illustrated.*

Cloth, $3.75 net (postage 27c.)

Mr. LONDON'S *new book* **The People of the Abyss**

Mr. JACK LONDON'S view of life and labour in the London slums. By the author of "The Call of the Wild."

Illustrated, $2.00 net (postage 22c.)

NEW FICTION

Mr' CRAWFORD'S **The Heart of Rome**

"is a good, even a thrilling story, told with a rare charm and an unflagging interest."—*Everybody's Magazine.*

Cloth, $1.50

Mr. QUILLER-COUCH'S **Hetty Wesley**

"A story of masterly power. . . . The novel of the season that has the most enduring value."—*Boston Herald.*

Cloth, $1.50

Mr. LONDON'S **The Call of the Wild**

"The sweeping success of the year in fiction." *Illustrated in colors.* *Cloth, $1.50*

Mrs. EDITH ELMER WOOD'S *navy novel.*
The Spirit of the Service

"A brighter novel it would be hard to find."—*Brooklyn Eagle.* *Illustrated. Cloth. $1.50*

THE BEST BOOKS FOR BOYS

Mr. STEWART E. WHITE'S **The Magic Forest**

reproduces as marvellously as his "The Blazed Trail" the atmosphere of the woods.

Illustrated in colors. $1.20 net (postage 10c.)

Mr. EDWYN SANDYS' **Trapper "Jim"**

is also illustrated by the author. "It would be hard to find a boy fond of outdoor life who would not rejoice to have it," says *The Outlook.* *Cloth, $1.50*

THE BEST BOOKS FOR GIRLS

Mrs. MABEL O. WRIGHT'S **Aunt Jimmy's Will**

is a story that will spread the gospel of sunshine wholesomely. Illustrated by Florence Scovel Shinn. *$1.20 net (postage 10c.)*

Miss GWENDOLEN OVERTON'S **The Captain's Daughter**

A straightforward, vivid picture of an army girl's life in a frontier post. *Illustrated. Cloth, $1.50*

are some of them amusing, some of them pathetic, but in every one the incident is one which has at some time come under the observation of the author of "The Making of an American" during his long "Battle with the Slum." *Illustrated. Cloth, $1.50*

Published by **THE MACMILLAN COMPANY** **66 Fifth Ave. N. Y.**

The Nation.

NEW YORK, THURSDAY, DECEMBER 3, 1903.

The Week.

Mr. Cleveland has chosen the better part. In taking himself definitively out of the list of Presidential possibilities, he renounces no honor which he has not already had in full measure, but confirms himself in the admiration of his countrymen, while insuring an old age enriched by dignified leisure and troops of loving friends, instead of being embittered by strife and trouble. Cobden wrote, apropos of Lord Palmerston, that "all men of the age of seventy-two with unsatisfied ambitions are desperadoes." The saying is true of some men at other ages—say, forty-five. But Mr. Cleveland has shown that his ambitions are satisfied. Not even the extraordinary turning to him at this time of the hearts and hopes of thousands among the best in the land can move him again to risk health and happiness in political turmoil. The third-term tradition he does not mention but undoubtedly respects, though in strict form it would not be operative against him. Old enmities would be, however, though he could doubtless have ridden them down as so many times before. But, as we say, his decision is a wise one. The vilifications of a few years ago have given place to praise; his party is returning to his feet; his counsels are sought with all of the old confidence. What better ornament of his declining years could he hope to have?

Gov. Odell has the advantage of Platt in years and in bodily vigor. He has also far more personal force. He does not, like Platt, temporize with opposition, speak his enemies soft, and bide his time for undoing them by petty treachery, but he beats them down with a mailed fist. His hand has been heavy on the Legislature; he has put through some of his schemes for tax reform and departmental reorganization—often excellent—with a relentlessness that has won him many foes. His method was shown when, at the beginning of Mr. Odell's term, Platt sent his son to the Governor with a few of the usual orders, and the Governor practically kicked the emissary out of the executive chamber. It was shown again last week, when he went to Washington with his "fighting clothes" on, and delivered to Platt an ultimatum demanding unconditional surrender. In both cases Platt yielded because he could no nothing else. Certain it is, then, that if the Governor has made up his mind to displace those State leaders who are drones, incompetents, or secret friends of the Democrats, he will do the work with thoroughness, and make the organization far more efficient than it could be under Platt.

Granting all that may be said for Odell's leadership, however, the result of the conference in Washington must be disquieting to Roosevelt. The President, by appointing State Senator McClelland to the Board of General Appraisers, helped forward Platt's scheme for renewing his grip on the Legislature again; but along comes Odell and with a single puff blows down that elaborate card house. Moreover, the President—according to common report—is not particularly fond of the Governor and does not profoundly trust him. The doubt which vexes all national managers is whether anybody can save New York from the Democrats. The feud between Platt and Odell has already gone so far as to weaken the party; and Platt, though beaten, can be trusted to resort to underhand means to harass the victor. If Mr. Odell is to be professed leader and responsible for the outcome next November, Platt will not be sorry to see a Democratic victory, even if both Roosevelt and Senator Depew fall outside the breastworks.

"I have always contended that the laws of commerce are as positive in their action as the laws of nature"—thus Senator Hanna in explanation of the present financial depression. We are certain that this revolutionary statement will be received with dismay by the "standpatters," and the numerous persons who up to this time have believed with Mr. Hanna that crops, prosperity, stable finances, and the full dinner-pail all depended upon the Republican party. We have no recollection that, during the hard times under President Cleveland, Senator Hanna or any other Republican leader admitted that there was such a thing as a "law of commerce." The bad crops, the monetary depression—all the misfortunes of the Democratic régime—were merely due to the fact that the man in the White House was a Democrat with leanings toward free trade. The one thing necessary to give the wage-worker the highest possible pay and to bring peace and contentment into every home, was to elect a good Republican to the Presidency and fill the House and Senate to overflowing with men of the same political faith. Now that Senator Hanna is willing to admit that the financial condition of a country depends upon something more than legislation at Washington and the complexion of the majority party, that there are deep, underlying laws controlling trade and commerce, we may expect to hear something else than "standing pat"—even from Ohio. At any rate, it is pleasant to learn now from Mr. Hanna that "business is good" and that "we are simply settling back to a normally prosperous situation."

Even this reassuring statement of Senator Hanna's will not, we think, quiet the increasing uneasiness of the Republican leaders at the steadily growing gap between the national income and expenditure. For the four months and twenty-five days of the fiscal year the deficit is $4,500,000, as against a surplus of $11,865,967 for the same period of last year. The *Times* learns that the President will use these figures to urge economy upon Congress. Senator Elkins remembers now having advised some of his Republican colleagues of the last Congress not to repeal the war taxes, and he plaintively remarks: "An excess of revenue is a very fickle thing. It often vanishes very suddenly." That this is a profound and statesmanlike thought no one can deny. But how can the President or Senator Elkins, or even Hanna himself, wean a lavish Congress from billion-dollar expenditures? That is much more easily said than done, even in the face of a shrinking income. Moreover, Congress has voted battleships and cruisers with no thought that the payments for them would soon fall due. Now it is told by the Secretary of the Navy that it must pay out nearly $100,000,000 to maintain the service, and to meet shipbuilders' bills payable. Whereas the army and navy appropriations in 1895 were 49 millions, they were raised by the last Congress to 180 millions—unpleasantly large figures just at this time.

The rector of the wealthiest parish of the Episcopal Church in the United States diversified the perfunctory cheerfulness of Thanksgiving Day services by "adding intercession to thanksgiving." In Dr. Dix's enumeration of alarming signs of the times, the depression of values found a place beside class hatred, gambling, irreligion, and infidelity to the marriage bond. Indeed, if rhetorical emphasis be any criterion, selling stocks cheap is an even more heinous offence than any previously catalogued by theologians. Dr. Dix deplored "the cold-blooded assaults on private property by those who attack corporations and drag them down to bankruptcy for their own advantage, in order to enrich themselves by the losses which their acts bring about," and then condemn murder and assassination. Apparently, the preacher desired some kind of divine support for the stock market. Now, nobody has attacked or depressed the actual business of the United States Steel

Company, for example. It is worth just what it was a year ago. Furthermore, nobody could have attacked the securities of that company with success if they had been worth intrinsically what was paid for them. Again, those securities are to-day worth just as much to actual holders as they ever were. No sympathy need go out to speculators in inflated values; and if Trinity Church is to assert both a geographical and spiritual jurisdiction over Wall Street, it will do well to reserve its anathema for those who better deserve it—the great bankers and promoters who sold the widow and the orphan paper promises made to be broken. A spiritually minded pastor might well thank God that hard times have revealed our betrayers.

We must reserve judgment on the remarkable allegations made on Tuesday week in the Shipbuilding suit until Mr. Schwab shall have been heard in his own defence. As yet, only one side has been presented, in the matter either of the "bribing" of the company's officials, or of the Bethlehem Steel clique's interference in the affairs of the Shipbuilding Trust. Of the two, the second allegation, if confirmed, would in our opinion be the more serious. Mr. Nixon stated that Schwab's associate and counsel in the Bethlehem deal, Max Pam, had "marked off" $250,000 from the Shipbuilding Trust's assets, after including that sum in the statement to the Stock Exchange; that the Bethlehem Steel forced the other companies in the Trust to buy material from it at prices above the market, and that bids for two battleships prepared by Nixon, which would have got the contracts and earned a profit for the Shipbuilding Company, were altered by the ingenious Mr. Pam to figures which proved prohibitory. Mr. Nixon's evidence, in short, ran close to the inference of a conspiracy to ruin the Shipbuilding Trust and force it, at bankrupt prices, into the hands of the clique behind the Bethlehem Steel. This is a very serious charge—of such a nature that men with a keen sense of honor, if thus accused even by inference, would ordinarily insist upon an immediate opportunity to make public answer. Hence we must express our regret at the repeated postponements of the case, and the persistent rumors that neither Mr. Schwab nor Mr. Pam will be allowed to take the stand.

The announcement that the Pension Commissioner, Mr. Eugene F. Ware, has decided to resign his office, after a service of but little over a year and a half, is fresh proof that this is one of the most difficult offices to fill properly and keep filled. There is scarcely a position in the President's gift which requires such tact and courage, as well as the ability to stand a never-ending pounding from a portion of the public. "Corporal" Tanner's love for the veteran proved to be too intense, in the opinion of President Harrison, to enable him to hold the office for any length of time. With Commissioner Evans's gallant fight our readers are still familiar. The best testimonial to his fitness was the continual cannonade of the Grand Army and the spoilsmen, which finally led to the acceptance of his resignation by President Roosevelt and his transfer to London. Commissioner Ware was the President's own choice for the place, but, whether because of his sensitive poet's nature, which may have made it so difficult for him to endure newspaper criticism, or for some other reason, he has never seemed happy in office. Indeed, the announcement of his resignation states that, while not to take effect for a year, it is due "to long-felt dissatisfaction with the nature of the duties of his office." With the Grand Army clamoring for a service pension, irrespective of merit or necessity, it is well that the President has plenty of time to search for the rare man needed as Commissioner.

In the opinions of Republican Representatives, published by the *Evening Post* on Tuesday, on the question of disfranchising qualified negro voters in the Southern States, a gratifying unanimity is displayed. All who express themselves at all are of one mind on the injustice of the policy pursued in the South, and on the need of applying the most effective remedy attainable. This was to have been expected. Public defence of such undemocratic and inequitable measures is not possible. Men may privately apologize for them or glory in them; they may say that the objectors are "mere sentimentalists," or maintain that it is not feasible or good political tactics to raise the issue; but no man who professes to be of the party of Lincoln can openly advocate shutting the door of hope in the face of 10,000,000 American citizens. So far as the responses go, they indicate a rather surprising readiness to follow where any courageous party leader may point the way. Several causes have been quietly at work to effect this rousing of the dormant Republican conscience. Last summer's revelations of a new slavery—peonage—stirred the North visibly. Gorman's challenge on the race issue brought the blood to many a face. "I was against meddling with the question," one Congressman wrote us, "till Gorman spoke; but now I am for any law to check so insolent an outrage." It is for the Republican leaders to choose. They must see in current events upon how slippery a place the "stand-patters," like sinners, will find themselves standing next year. Is it not worth their while to try to revivify a great party by making it the champion of equal justice?

The Supreme Court of Alabama has done a notable act of justice to Peter Crenshaw, a negro, and to the men of his race, in confirming his right to the suffrage. Crenshaw, our readers will remember, is a veteran of the civil war, in possession of an honorable discharge from the Federal army. Yet for no other reason than that he was a negro politician the Board of Registrars of Limestone County refused to permit him to register, in flat violation of the Alabama Constitution, which gives the suffrage to any one who served honorably in the army and navy of the Union or the Confederacy. Crenshaw promptly availed himself of the Constitutional remedy, which was sustained in his contention for his rights by a jury of his white fellow-citizens. But this did not satisfy the spite of the Democratic politicians who desired to eliminate him from the politics of his county. They induced the State to appeal the case to the Supreme Court. The opinion of this tribunal is of very considerable importance, since it lays down the principle that there is no appeal from the decision of a jury in such a case, and that a voter given a certificate by twelve of his peers is forever free from interference by the higher courts. This decision will encourage negroes throughout the South to fight for their rights, and should make it correspondingly harder for prejudiced registrars to deprive qualified negroes of their rights under the existing constitutions.

More peonage revelations in various portions of the South must be opening the eyes of those editors who criticised us last spring for believing that the Alabama cases were other than sporadic and unparalleled happenings. Judge Emory Speer last week sentenced three well-known Georgians to pay fines of $1,000 in two cases of peonage, and there are two other indicted men. In Louisiana, also, peonage has been discovered in more than one place, and, most important of all, the United States Marshal who has been securing witnesses there has received a "warning" that the "white people do not propose to be annoyed by your kind of cattle." The part played by him in uncovering the species of slavery which has been flourishing in certain parishes makes it, he is informed, "necessary" for him to find a residence in some other State. In Montgomery, Ala., the case of a white peon has just come to light, although the State was supposed to have been purged of peonage months ago. In Mississippi, also, there are persistent rumors of the new slavery, and there have been cases reported from Tennessee and Texas. Undoubtedly, the shameful system of leasing convicts is responsible for the spread of the peonage idea. But the fact that the negroes were politically defenceless has made them an easy prey to their unscrupulous white neighbors. The one encouraging feature

of the whole scandal is that the miscreants are being punished by white judges and juries.

The collapse of the Chicago street railway strike is a warning to "labor." The employees went into the struggle with high hopes; they came out of it defeated in every substantial contention. In many ways they were favored at the outset: they were fighting a corporation which is as unpopular as most street railways; they were backed by the sympathy of unionists in other trades; they were in a city where "labor" is strong politically, and where the mayor is sympathetic. Yet the storming of the cars by the strikers was such an outrageous piece of violence that Mayor Harrison could but order the police to do their duty. The outcome of the contest, however, was not owing so much to the action of the municipal authorities as to the condition of the labor market. The slackening in business is throwing men out of work; and the recent contemptuous refusal of anything but the highest pay and the easiest hours is changing into readiness to accept reasonable wages and fair terms. The lesson which this winter will teach in all our large cities will be bitter but wholesome. Capitalists are suffering from a falling market; and as surely as watered stock runs down hill, so surely must labor bear its share of loss. No combination of walking delegates, no federation of unions, no dynamite or bludgeon can force employers to carry on industry at a permanent loss; and the hour has come to remember that a feather in the hand is better than a bird in the air.

Whether the fighting in Jolo was necessary or not, the outbreak itself is significant. It was in Jolo, it will be remembered, that our soldier-diplomatists won their greatest renown. Gen. J. C. Bates's treaty was hailed as a sample of the kind of achievement in the interests of peace which our soldiers could compass, if only unfettered by foolish civilian administrators. After wearing these laurels with becoming modesty for a couple of years, Gen. Bates himself found that there were defects in his treaty—which, among other things, provided for the continuance of polygamy and slavery under the flag. Now Gen. Wood, after slaughtering hundreds of Moros at the cost of one soldier killed and a half-dozen wounded, announces that this entirely abrogates the Bates treaty. So it may. The pity of it is that here is fresh proof that we have got to keep on fighting in the Philippines. That fair dream of a far-distant people happily subject to our Congress and contentedly licking the Presidential hand that sends them a Taft or a Wright to preside over their destinies, has long since faded away. Every report of the Adjutant-General records the dead and wounded in the Philippines. Some of the regiments now arriving at San Francisco have on their rolls the names of many dead or discharged for wounds. Yet, when they went out, peace was supposed to be at hand. Worst of all, the great mass of Filipinos dislike Americans as bitterly as in 1899.

A certain capacity for folly in the professionally virtuous is illustrated in the recent activities of the Boston Watch and Ward Society. This body does the useful and necessary work of prosecuting purveyors of obscene literature. Recently it obtained a judgment against a publisher who had advertised a complete and unexpurgated 'Decameron,' emphasizing the occasional obscenity of that great work. Unhappily, the pornograph offered the moral defence that the 'Decameron' was on sale at the most reputable establishments; and the Watch and Ward people were foolish enough to order copies and enter charges against the best publishers and booksellers in Boston for circulating obscene literature. An unfortunate by-result was an artificial notoriety of Boccaccio's masterpiece and an enormous demand for it at the public libraries. If a great book is misused in Boston to-day, the Watch and Ward Sociey is certainly in part to blame. The incident shows lack of common sense quite as much as of culture. All that any such society can do is to prevent doubtful books—which happen also to be standard literature—from being advertised and spread broadcast by reason of their immorality. It should require no great discernment to perceive that the 'Decameron' actively circulated in boys' schools is obscene literature and actionable, while the same book quietly awaiting a purchaser is good literature and fit company for Dante and Shakspere.

Since M. Jaurès's revelations of last April and Gen. André's avowal of the forgeries of the General Staff in the Dreyfus case, it has been almost inevitable that the matter should be reopened. Naturally the revision which is now authorized by the Minister of Justice will take into account only the evidence that lay before the Rennes court-martial. The fact that an appeal is granted is proof that the prosecutors introduced other false testimony than the patent perjury of Gen. Mercier on that occasion. It may be assumed, too, that the revising authority will not reiterate so absurd a verdict as "guilty of treason, with mitigating circumstances." The confirmation of the earlier judgment would leave Dreyfus morally condemned without mitigating circumstances of any kind; the reversal of the military court would make him not a pardoned offender, but a vindicated martyr of French army corruption. The attempt will be made to keep the reopened *affaire* out of politics. Some success may meet this laudable effort, for none of the present Government was implicated in the various prosecutions, and the Anti-Dreyfus Nationalists have lost with votes most of their capacity for mischief-making. Still, it hardly seems possible that a matter about which so many evil passions have raged can be revived in judicial serenity of spirit.

The opening of the University of Munich to women is an event of considerable importance because a very conservative university goes over to the liberal practice of Heidelberg and Freiburg. Formerly they have been admitted to lectures on tolerance merely and at the caprice of individual professors. Lately, for example, a determined effort has been made to reduce the number of women students at Berlin. Similarly, in the rare instances in which women have received the Doctorate in Philosophy, there has been something exceptional in the award. Now German women are to be received at Munich on precisely the same terms as men, and unquestionably American women will get due credit for their work done and degrees received at home. This liberal step, which involves equally Erlangen and Würzburg, should have the effect of attracting towards Bavaria the now scattering foreign women students.

Serious anti-Austrian demonstrations have been made by the students at Rome; and throughout Italy the Irredentist feeling appears to be making head. It is felt that Italy has never been wholly freed from the Austrian yoke. To the east of the Adriatic, Dalmatia and Istria (Italian-speaking provinces) afford an outlet to the sea to the Dual Kingdom. Trieste intercepts the trade that used to go to Venice. Again, the province of Trent carries the Austrian dominion far down the southern slope of the Alps, separating the Venetian from the Lombard province. Thus the Irredentist agitation, though excessive in its more violent manifestations, is colorably justified in the main. Of course, the disorders at Rome are of themselves insignificant. They do show, however, the drift of Italian opinion, and indicate that Austria must make distinct effort to secure the friendship of Italy if the Triple Alliance is to remain more than a name. Concessions on the Adriatic, Austria cannot afford to make, but she could afford to cede the Trentino. Already the Italian legislators from that tiny province have made trouble enough to win virtual autonomy for their constituents. The possession of the Trentino, while a menace to Italy, is hardly a source of strength to Austria, and certainly not of wealth.

A TREATY OF WAX.

What the Washington Administration thought, three weeks ago, of our treaty with Colombia is generally known. It was the document under the pretended authority of which Secretary Hay sent that sardonic notification to the Government at Bogotá—namely, that it was dismembered, and that it had given us the treaty right to prevent it from maintaining its sovereign rights. By some hocus-pocus, our guarantee of Colombian sovereignty on the Isthmus had become the means of its destruction there. We could not take sides against the revolutionists, nor allow the Colombians themselves to interfere. That was the official Washington interpretation of the treaty, on November 6, 1903. Yet the interpretation of the same treaty by the same Administration in September of 1902 was exactly the opposite. President Roosevelt not only reversed his predecessors; he reversed himself. The official dispatches of the State and Navy Departments in September of last year show this clearly.

But, first, it will be well to set forth briefly the historic view of our treaty with Colombia. Its origins are disclosed in the confidential correspondence accompanying its transmission to the Senate in 1847, from which the seal of secrecy has only now been removed. The American negotiator of the treaty, B. A. Bidlack, wrote from Bogotá to Secretary Buchanan:

> "I could not obtain these terms [favorable tariff rates] without consenting to guaranty the *integrity* and neutrality of the territory. . . . The guaranty extends only to the isthmus, and anything like a general alliance is carefully avoided."

In the confidential message of President Polk, much the same language was held. We extract two salient sentences:

> "The guaranty of the sovereignty of New Granada over the isthmus is a natural consequence of a guaranty of its neutrality, and there does not seem to be any other practicable mode of securing the neutrality of this territory. New Granada *would not consent to yield up* this province in order that it might become a neutral State; and if she should, it is not sufficiently populous or wealthy to establish and maintain an *independent sovereignty*."

Poor Polk! How far behind the times such belated notions make him appear! The advantages of a snug little tête-à-tête republic had not occurred to him.

This original understanding of our engagement "positively and efficaciously" to guarantee to Colombia her "rights of sovereignty and property" in the Isthmus of Panama has been consistently sustained by American Presidents and Secretaries of State down to the present year of grace. In 1865 Mr. Seward declared that the United States could not become "a party to any civil war in that country by *defending the Isthmus against another party*." Secretary Fish wrote in 1873 that our treaty obligation had "never been acknowledged to embrace the duty of protecting the road across it [the Isthmus] from the violence of local factions; but it is regarded as the undoubted duty of the Colombian Government to protect it against attacks from local insurgents." And in 1885 President Cleveland, describing the action of our forces on the Isthmus, in the insurrection of that day which gave rise to claims against Colombia not yet settled, said it was "always in aid of the sovereignty of Colombia."

So, as we have said, was the action of President Roosevelt last year. There was a revolution then. It was a real one—not a New York promoted affair—with real fighting. Admiral Casey telegraphed that it would have been a triumphant insurrection but for the presence of United States troops. "I firmly believe if our men were removed from shore the insurgents would be in Panama in forty-eight hours." But he was informed from the Navy Department that he must "overlook matters of minor importance," since "negotiations for the ship canal are at present at a standstill on account of a feeling of irritation on the part of the Colombian representative." Here we get the first glimmerings of the brilliant idea that a canal is a bigger thing than a treaty.

But the State Department was not idle. On September 11 it had a dispatch from our Minister at Bogotá reporting a request of the Minister of Foreign Affairs for the exercise of our good offices, as against the insurgents on the Isthmus. It was explained that the insurrection was delaying the "canal matter"—that everlasting canal! Thereupon Acting Secretary Adee informed the Secretary of the Navy that he had "communicated with the President," and had "received from the President a telegram *approving* of my suggestion as to intrusting such a mission to the commander of the *Cincinnati*." Accordingly, orders were duly issued, and the insurgents, before whom, Admiral Casey wrote, "Panama would fall an easy victim but for the restraining influence of our naval force here," were induced to make peace. In other words, one year ago the United States actually intervened to aid Colombia in restoring her sovereignty over the Isthmus.

To bring out the lightning change which came over our Government's interpretation of the treaty in only fourteen months, we have merely to put side by side two naval orders, one issued on September 20, 1902, the other on November 2, 1903. In the former, Secretary Moody telegraphed to the commander of the *Cincinnati* simply to prevent "the line of transit" from being converted into the "theatre of hostilities." He added: "Transportation of Government troops not in violation of treaty, and which will not endanger transit or provoke hostilities, may not be objectionable." Now turn to the dispatch of November 2, 1903 —*two days before* the cooked-up "revolution," of which our innocent Government knew nothing—and we find Admiral Glass ordered to "prevent landing of any armed force, either Government or insurgent, with hostile intent, *at any point within fifty miles of Panama*."

The case is absolutely clear. Mr. Roosevelt departed not only from the policy of foregoing Presidents, but from his own of a year before. The same treaty which in 1902 led him to aid Colombia, in 1903 compelled him to antagonize her. This is obviously to convert a treaty into a nose of wax. Into it the President seems to have been willing to read his passing and changing wishes. His one controlling desire appears to have been, not carefully to observe precedents and good faith, but at all hazards and under any pretence to "get that ditch."

THE POSTAL THIEVES.

Mr. Bristow's report on the postal investigation is one of the most sordid revelations ever made in a public document. He slides under the microscope a cross section of the Department, and shows us in a flash the tissue alive with squirming parasites—a group of public officers without conscience, conspiring with depraved citizens in schemes for plunder. Trusted employees were busy filching from the Treasury everything on which they could lay their fingers, down to a cent and a sixth on each money-order book. Their accessories in crime were often prominent manufacturers, men of standing in business, society, and politics, like ex-Congressman Edmund H. Driggs of Brooklyn and State Senator George E. Green of Binghamton. In this history, which gives the world its first clear idea of the extent of the frauds, there is not one tale of courage or audacity—nothing to lift the operations of the gang above those of the ordinary sneak thief, unless one excepts the brazen recklessness of Beavers and Machen, whose wholesale robberies rival what Burke called the consolidated corruption in the heroic times of Roman iniquity. One can find something admirable in the desperate bravery of Jack Sheppard or Dick Turpin: though with misdirected energy, they at least led the strenuous life. But most of these postal officials never rose above the level of the housemaid who fibs and plots day after day for the sake of adding to her hoard a spoonful of sugar and a pinch of tea.

Among the twenty outsiders who are under indictment, Mr. Driggs and Senator Green are the most conspicuous. Both have loudly protested their innocence and begged for a suspension of public judgment until they should have a chance to defend themselves. But unless Mr. Bristow and the Government attorneys are the victims of mania, both

statesmen should soon be wearing the stripes of a felon. Each case, as Mr. Bristow presents it, is absolutely plain. Congressman Driggs accepted a bribe of $12,500 to secure an order for 250 automatic cashiers, and part of this money has been traced to the bank account of Beavers. Green is deeply involved: as president of the company that makes the Bundy time recorder, he paid Beavers 10 per cent. on all sales made to the Department. He also bribed Beavers in order to get a contract for cancelling machines. There are checks showing various transfers of money from Green to Beavers; and when Green was asked by the grand jury for an explanation, he declined to answer, on the ground that he might incriminate himself. The methods of the other conspirators were much the same. They persuaded postal officials to order excessive quantities of supplies at exorbitant prices, and then shared the ill-gotten profits. H. J. Barrett, nephew of James N. Tyner, assistant attorney-general for the Department, added a touch of variety by obtaining from his uncle decisions allowing get-rich-quick and other swindles to use the mails. But from Driggs and Green down to Cupper, the paint contractor, all were diligently picking the pockets of Uncle Sam.

There is another group of rascals, whose names are withheld, and who are otherwise treated rather gingerly—Congressmen who intrigued with Beavers to secure for various favorites unwarranted and unlawful increases in salaries. One case, from a hundred or more, will serve as an example. A member of Congress recommended an increase in the allowance for clerk hire at Conyers, Ga., which was then $40 a year. The amount of mail handled would have entitled the office to $160, but when the Congressman called on Beavers personally he got $820; for a clerk whom he recommended. When the Congressman's favorite was transferred to another office, the allowance was reduced to $100, plain proof that the $720 was spent, not for the needs of the service, but for the payment of a Congressman's political debts. By such means Beavers made himself "solid" with the politicians of both parties, and held his place through thick and thin. The President surely speaks ironically when he says: "So highly were Messrs. Beavers and Machen thought of by those who had been brought into close connection with them, that the Congress actually provided at its last session for raising the salaries of both." In fact, so many members of Congress were morally, if not legally, *particeps criminis* that they had to strike hands in a general undertaking to reward their accomplices.

One of the big fish, Perry S. Heath, managed to slip through the meshes of Mr. Bristow's net. He still declares that he is an innocent man, pursued by malicious enemies; but it was under his administration that these frauds flourished; there is testimony, corroborated by circumstantial evidence, that he, or members of his family, received stock from at least two concerns with which the Department was doing business. Through the grace of the statute of limitations he escapes certain charges, and on others the district attorney regarded the evidence as insufficient. But he is saved as by fire. Under the circumstances the quicker the Republican National Committee turns him out of the secretaryship the better for the party.

Mr. Bristow's investigation has been thorough and fearless, and he deserves high honor. He expresses his thanks for the hearty coöperation of the President, First Assistant Postmaster-General Wynne, and Assistant Attorney-General Robb. For obvious reasons he cannot thank the one man who should have supported him—Postmaster-General Payne. Indeed, when Mr. Bristow writes, "What the service most needs is honest, intelligent, and vigorous administration," he points out unerringly the glaring defects of Mr. Payne's management.

President Roosevelt's course is most creditable. He directed Mr. Bristow to spare neither high nor low, and in spite of frantic appeals for clemency he has unwaveringly backed the investigators. His memorandum on the subject is emphatic and sound: he will "exhaust every expedient" to see that "justice is meted out to the offenders." His attitude robs these shocking disclosures of much of their force as a political issue. Of course, many voters may argue that though the President's own hands are clean, the party is so deeply fouled that a complete purifying is needed. There will be general agreement that one man should go at once—Mr. Payne. To-day he stands revealed more clearly than ever as a miracle of incompetence. If the President will put in his place some man whose honesty and ability are unquestioned, he will strengthen incalculably both his Administration and his party. The investigation of which Mr. Payne wished to see the end is now completed; and the folly of the past can no longer be "urged as a reason for the insanity of the present and the future."

SENATE, PRESIDENT, AND HOUSE.

Great changes in the working of Governmental machinery often pass almost unperceived, in their beginnings. They are not heralded with a "Lo, here! Lo, there!" The Senate of the United States, for example, attained its present pitch of power with no blare of trumpets. Small successive increments did the business. Hence it is not surprising that a movement to clip the wings of Senatorial privilege should not have caught the popular attention as it ought. We refer, of course, to Speaker Cannon's resolute refusal to submit to the dictation of the Senate. Important in itself and for present purposes, it is vastly more important for what it portends. Mr. Cannon is apparently determined on a course which, if unflinchingly persisted in, will do much to restore the ancient prerogatives and repute of the House, will redress the balance of power as between it and an overweening Senate, and thus will have a powerful influence upon Congressional practice as well as upon Constitutional theory.

Readers of the press dispatches from Washington are familiar with what occurred. The Senate, in its usual complacent fashion, had arranged everything. Its committees had "decided" that there should be no vote on the Cuban bill before the middle of December, and that accordingly the extra session should adjourn on the eve of Thanksgiving. These lordly gentlemen never dreamed of consulting the House. What was it there for but to do as it was bid? The Speaker and the Committee on Rules were, to be sure, necessary officials, but the main object of their existence was, after all, to execute the orders of the Senate. So these particular orders were transmitted to Speaker Cannon; but that grim and square-jawed personage contemptuously flung them back in the Senate's face. Senators said that the special session should now adjourn, did they? Well, Congress would *not* adjourn, said the Speaker. Congress is made up of two houses; and he intimated that it was time for Senators to learn that "there are others."

In this opening battle of what promises to be a prolonged Constitutional struggle, we cannot think the President's part happily chosen. He has appeared not to know his own best friends. To the real enemies of his great office he has given a certain amount of aid and comfort. Of course, we understand that a President seeking a renomination is bound, in a party sense, to maintain that everything is for the best possible in the best possible of Governments. Accordingly, the humble pie which the Senate prepared for Mr. Roosevelt he could but eat with true Thanksgiving relish. So we had on Thursday the inspired announcement that the President was not at all disappointed at the failure of Congress to do as he asked. Everything was coming out just as he expected, and exactly to his mind. If this is simply the customary official optimism at which all the world smiles, it may pass; but if it implies that President Roosevelt is not alive to the real nature of the impending conflict, the pity of it is great.

For the Senate has been steadily working to reduce the President as well as the House to a nullity. President and House, therefore, should feel themselves natural allies in this fight. They should jointly put their names to a document like this: "Resolved, That the power of the Senate has increased, is increasing,

and ought to be diminished." The weapon which the Senate uses in attacking the House is its own inability to legislate except by unanimous consent. With ninety chartered libertines to block bills in regard to which they have not been "squared," the Senatorial conferees have been in the habit of compelling the House to give way and accept Senate amendments, as Senator Lodge says, "without a change even in punctuation." Assuming thus to be all-powerful in the making of laws, the Senate goes on to assert control over the framing of treaties and the filling of offices. Thus it strikes both ways. It would make of the President merely a clerk. The House it would degrade to the position of amanuensis to the Senate.

It was high time some one should lift a hand against these swollen privileges. Speaker Cannon deserves both thanks and support. If the President will not join forces with him, the intelligence of the country should. We take it that this is no chance act of Mr. Cannon's. He has enlisted for the whole war. Congressman McCall's article in the *Atlantic* foreshadowed what was to come. The surest road to a reform of the Senate lies through a strong assertion of the rights and dignities of the House. Senators are, for example, pottering over some amendment of their rules—those rules how not to do business. But revision may come speedily by way of "Uncle Joe's" obstinacy. When an issue is made between the two houses, and Senators resort to the usual argument that they have no rules such as the House has to shut off filibustering debate, the Speaker may say to them, "Adopt such rules, then." If you persist and say, "But we cannot, and you will force an extra session if you keep on," Mr. Cannon may rejoin, "Extra session let it be. That will give the people an opportunity to judge between you and me, between the Senate and House."

Brought sharply up to this alternative, there can be little doubt what the Senate would do. It would mend both its rules and its manners. If it did not, it would hear from the country something unpleasantly like, "Mend it, or end it."

THE PASSING OF "INTEGRATION."

The last two years have witnessed the shipwreck of many a fine financial theory. Aerial navigation is, in fact, no nearer attainment in Wall Street than in the Bois de Boulogne. In neither place can the dirigible balloon be constructed out of such stuff as dreams are made of. Recent industrial developments show this, and are bringing into contempt the most ambitious and far-reaching of our latter-day economic doctrines—that of the "integration of industry."

This phrase is, in a large sense, the antithesis of the time-honored expression, "specialization of industry"; and so means nothing less than the counteraction of a tendency which has operated in industrial affairs from the beginning of human effort. Integration of industry does not strike necessarily at the very letter of the law of the division of labor, but it certainly runs counter to its spirit. That law signifies diversity in unity, whereas integration means unity in diversity. In other words, under the old policy the main thing was an ever-increasing differentiation of industrial effort, the unification of results being left to natural law to work out. Under the new, the chief feature is a conscious human effort to coördinate a vast number of hitherto conflicting industrial elements, and to bring them under common control. But the new departure was purely fortuitous. It was not an evolution; neither was it a suddenly devised scheme to meet a great and unexpected change in the basic conditions of industry. It was just the application of *à priori* notions to the financial and industrial situation. Nor was integration one of those movements which break out simultaneously in widely scattered localities. Its origin is easily traced to Wall Street, and to a mere handful of individuals even there.

There was a fair presumption at the start that the integration argument contained a fallacy, but in many minds this was felt rather than perceived. Most persons were disposed to suspend judgment till they saw how the experiment would turn out. It is safe to say, however, that they have waited long enough, and are now ready to express their minds forcibly. The experiment was tried on a pretty extensive scale, and seems to have broken down at about every point. A chain of industries was formed, the work of integration was begun, the principle of making one hand wash the other was strictly applied, and for a time the new theory was triumphant. But the fact is, a chain is no stronger than its weakest link, and this particular chain contained a number of links that were very weak indeed.

Steel was easily king when it came to the integration of industry. Combine a great number of already overcapitalized companies into one corporation of almost unthinkable magnitude, and add some hundreds of millions of new capitalization. Then buy up—or think you do—all the sources of the raw material at any price which the owners may take a fancy of naming. Incidentally, of course, you must own railroads and lake transportation lines. Next you must buy up all the ocean steamers that are for sale anywhere in the world, without regard to their age or fitness for modern conditions, paying three prices for them. If, finally, you can identify yourself with the various construction companies, so much the better. The beauty of the scheme is—in theory—that if one branch of the business goes back on you, the others will pull you through. But, unfortunately, in this most signal instance the theory has failed to work.

There has been integration within integration. The United States Steel Corporation was an integration, but was itself integrated with nobody knows yet how many other projects. The sources of the raw material were coördinated with the transportation companies and with the crude manufactured products, and through other stages with the finished commodities. But this beautiful scheme was like Hawthorne's railroad to the Celestial City—it ended on this side of the river. There was one fatal defect—the consumer was not also integrated. He seemed to have been at the start, but we now see that it was a mistake. Even the contemplated integration—that which was going to insure such a community of interest between the Steel Trust and the Shipping Trust and the great railroads and, it is stated, certain large contracting companies, not to mention important money-market interests—has also apparently broken down. Probably the real explanation is that every step in this integration upon integration was marked by rash extravagance. Every detail was apparently overcapitalized. The boasted "economies of management" seem all to have gone to the promoters. It is stating the case very mildly to say that it is hard to see how the situation could be any worse if all the factors of this huge integration had been left to work out their own salvation, governed only by what Adam Smith calls the "higgling and bargaining of the market." Integration shrewdly managed may be a good thing, though even so it cannot be a magician's wand to make profits where none exist in natural conditions. Managed as we have seen it, however, with lavish overcapitalization and reckless discounting of the future, "integration" looks to-day very much as if it were spelled "disintegration."

STYLE AND STATECRAFT.

That accomplished woman who chooses to be known as "Vernon Lee," suggests in the *Contemporary Review* a new method of criticism. Assuming that the style of a writer betrays inevitably his personality, she argues that syntax in the last analysis is psychology, and she applies to Thomas De Quincey an analysis as searching as ever one of Gildersleeve's pupils devoted to an Attic orator. Her results show that De Quincey's moral flabbiness reveals itself most distinctly in his use of verbs. Dissecting one of the finest passages of 'The Opium Eater,' she finds that the verbs, adverbs, and active participles are as one to four against all the other parts of speech (50 in 200 words). More significantly yet, the fa-

mous passage would fairly stand complete though bereft of its verbs:

"The verbs are for the most part verbs of existence or of mere explanation. Whatever they are—'was,' 'ascribe,' 'begun,' 'call it' (in the sense of naming), 'found,' 'learned,' etc., etc.—they serve only to bind the nouns and adjectives into logical sentences, but do not bring much sense of action into the passage. Most of them, moreover, might be replaced by equally indeterminate words without altering the total effect."

The conclusion of the whole matter is that De Quincey's undoubted eloquence is that of the noun and adjective. His appeal is to the eye; his grasp of the world of action the fumbling of a moral incompetent—and of a superb dreamer.

"Vernon Lee" will tell us later how it stands with the verbs of Stevenson and De Foe. Meanwhile, it seems to us that the test may have utility outside the garden plot of belles-lettres. Why accept hearsay and the plaudits of the vulgar on our great men, when we have their verbs as an infallible criterion of their moral status? In this confidence we have been at the pains to examine the verbs in the first two paragraphs (about 520 words) of 'The Strenuous Life,' taking so large an extract to avoid the risk of hitting upon an exceptional lapidary period. Without pointing the literary contrast between De Quincey and Mr. Roosevelt—though that would be a pleasing task for the special student—suffice it to say that the President's style has an excellent underpinning of strong verbs. We count sixty-nine out of five hundred and twenty total words, and of the verbs only thirteen may fairly be dismissed as negligible. What may be called the category of effort requires sixteen verbs—among them help, demand, win (several instances), work (ditto), strive (ditto), help, try, succeed, get; and, naturally, the opposites, shrink and fail. Next to action, exhortation is prominent; speak, teach, preach, are present in six cases. Beyond this, the miscellaneous verbs only bear out the same stalwart quality, and of the six adverbs, even, the notable ones are: preëminently, distinctly, and ultimately—right absolute words.

Believing that knowledge of Senator Hanna's inmost nature and intentions would be more precious than rubies to the political forecaster, we have likewise analyzed an equal portion of his works. Here the difficulty is met that Mr. Hanna is not a "literary feller." But in choosing the peroration of his ship-subsidy speech before the Senate, March 6, 1902, we feel that we have caught the orator's authentic note. In some 525 words the junior Senator from Ohio shows some slight inferiority to his chief—sixty verbs against sixty-nine. In their choice, however, the difference is much more striking. Nearly one-half (twenty-five, to be exact) must be classed as colorless words of existence and the like. The category of effort and strife is pitifully small. Yet the inference that Senator Hanna is temperamentally akin to De Quincey—is addicted to opium, lacks moral stability—would be premature. Good intellectual words (understand, know, realize, think), conciliating verbs (propose, induce, invest), are present in force. Observe, too, Mr. Hanna's nine adverbs, compared with the President's six: merely, quickly (three times), regularly, satisfactorily are the qualificatatives that indicate an ingratiating attitude towards the Senate and the world. Without setting up as an arbiter of styles, we believe that Senator Hanna's verbs are none the less formidable because less aggressive than Mr. Roosevelt's.

We have shrunk from applying the statistical yardstick to anything so precious as Senator Beveridge's diction. And yet our temerity has been rewarded by discovering that his large utterance is the ideal union of the qualities of De Quincey and Roosevelt. In sheer copiousness of verbs, Beveridge lies between the opium-eater and the apostle of the strenuous life. Nearly eighty in five hundred words is the proportion; of these eighty, fifty are colorless verbs, such as De Quincey used, but the remainder is more inspiring than even the President's list. Retreat, proceed, pant, desert, throttling, administering—it is a perfect trumpet-call to excursions and alarums. And the adjectives are a soul-stirring lot—virile, unwasted, masterful, mighty, divine, imperishable, undying, infinite, golden. In respect of the nouns, De Quincey in the glamour of his opium visions never arrayed them so opulently. Civilization, glory, opportunity, Agincourt, Waterloo, Australia, New Zealand, Africa, India, Egypt, mummy of the nations, Pharaohs, duty, fame, profit—are only a few of these truly orbed words. This style lacks only a minor perfection—the diplomatic adverbs of Mr. Hanna. In general, it fuses indissolubly the sturdy frankness of Mr. Roosevelt with the insinuating, visual suggestiveness of De Quincey. It need hardly be said that we have been studying Mr. Beveridge's epoch-making speech of February, 1899, "The Republic That Never Retreats."

Here, too, one must guard against over-rapid inferences, such as that Beveridge may be President if he will only not eat opium or abuse his impressionistic vocabulary. But the investigation seems to prove at least that the stylistic supremacy of the President is open to grave doubt; that a lapse into the non-heroic would make Mr. Hanna a most formidable candidate; while the addition of a certain Oriental sensuousness to our present robust ideals would make Mr. Beveridge the very man of destiny. Such at least is the verdict of the verbs.

FIELDING.

Shortly after Henry Fielding returned to London from Leyden, where he had been studying law for two years, a distinguished Frenchman arrived in England on the Earl of Chesterfield's yacht. This was Charles de Secondat, Baron de Montesquieu, who, during a residence of two years in the country, made some observations on the people that have never been succcessfully discredited. Among other unflattering things, he said that

"An ordinary Englishman must have a good dinner, a woman, and comfort. So long as he has the means of getting these, he is contented; if these means fail him, he either commits suicide or turns thief. All classes are corrupt. Honour and virtue are held in small esteem. There is no religion in England. If one speaks of religion, every one laughs."

Thus, without compunction, plainly and precisely, an enlightened foreigner described the society which Fielding began to write about at the age of twenty-one, upon which during twenty-five years, as dramatist, journalist, novelist, he lavished a frequently ribald ridicule and a constant rather splendid sort of scorn. By portraying his ordinary countrymen (some of whose habits were too notoriously his own), this extraordinary Englishman made for himself an uncertain living, poor at best, yet not dull, very great fame as a writer, and an almost correspondingly bad reputation as a man. He treated his material with the freedom and independence of a great humorist, and part of his reward has been identification with the baseness and corruption that he satirized. He drew many characters of a shining yet not superhuman virtue; he clearly perceived and sincerely loved real goodness; he continually proclaimed that human nature was his book, and his field the manners of many men. Yet, along with his fame, has been passed from generation to generation an impression that it rests on the description of his own vicious life and the shameless exposure of his own black heart.

This personal disparagement began in his own time. Richardson, who hated him (with cause), grieved for the "lowness" of a man who had so much talent, belonged to a great family, and had such nice sisters. He would not read 'Tom Jones,' but believed that the author wrote the "coarse-titled" book to fill his pockets, and "to whiten a vicious Character and make Morality bend to his Practices." Dr. Johnson, expressing for once (we think inopportunely) a popular opinion, "would not sit with Fielding." Smollett, whose own work is so chaste and discreet, reviled him, and Horace Walpole delighted to repeat evil gossip, spicing it with his natural malice. Through most of the nineteenth century, Henry Fielding (now absolutely identified with 'Tom Jones') existed under the grand tabu; and those who felt they must record a tribute to his literary achievement, let it be clearly understood that they knew well he was a shocking fellow and a sorry scoundrel.

The eloquence of Thackeray's appreciation is marred by sighs and groans, and a generally missyish attitude towards a scandalous rake who had had the luck to write in a time when it was possible to depict himself. Twenty years ago, Mr. Austin Dobson gallantly broke a lance in defence

of Fielding's character; but, as late as 1892, so tolerant and humorous a writer as Mr. Augustine Birrell declared that the "very name Henry Fielding" rings in the true tradition of the eighteenth century—the tradition that the proper place for a novelist was "either the pot or the sponging-house"; that he ought to be "either disguised in liquor or confined for debt." Mr. Saintsbury and Mr. Leslie Stephen have striven to discredit the assumption that a man must be depraved because he wrote a good deal about rakes and blackguards of both sexes, and because he is known to have been pretty steadily in debt and sometimes drunk; and now, introducing to the twentieth century an *édition de luxe* (that of the house of Croscup & Sterling Co.), comes the late Mr. Henley, eager, injudicious, extravagant, in his wish to remove every stigma from the man whose work has such an important place in our literature. His partisanship hurts the case. Contemporary criticism was not wholly instigated by envy and malice, nor nineteenth-century disparagement by prudery. Richardson and Dr. Johnson at least did sincerely believe that this young man, who belonged by birth to the world of fashion, and by nature to the world of letters, had the vices of both and the virtues of neither. And the reappearance of a Puritan spirit in England during the Victorian era offers some guarantee of the good faith of prevailing disapprobation.

In considering 'Jonathan Wild,' Mr. Henley says "it is a tremendous achievement in pure irony; and for this reason it is isolated in English letters. It is given to few to love irony for its own sake." He might have suggested as one of the reasons for his author's bad reputation that it is also given to few to understand irony, and that many of Fielding's severest reproofs of vice have been taken for indecent approbation or callous indifference. Undoubtedly he has suffered much from the dulness of the human understanding and the self-protecting impulse of human egotism. The number that can distinguish between natural virtue and formal morality, or, distinguishing, more highly honor the former, is not great; and nobody ever heard his own faults censured without rushing for extenuation to the "thou-too" argument.

The facts that can be arrayed either for or against Fielding are insignificant, and that which testifies for him most favorably is his marriage to the love of his youth, the beautiful Miss Cradock of Salisbury, and their mutual devotion, tried by years of poverty, the loss of children, and her protracted illness. 'Tom Jones' was written in the years between her death and his second marriage. As he believed his work would long survive him, he wished her name to be linked with his, and explicitly declares that she was the original of Sophia Western. Of 'Amelia' she is the whole inspiration, and it is not going too far to suppose that both books were deliberately intended to celebrate her beauty, charm, and virtue—a tribute to a woman who had forgiven much because she loved much.

Mr. Henley says little about the "four great books," because everything has been said already. His comments on the Plays and Miscellanies may lead people to examine them. Of the 'Journal of a Voyage to Lisbon' he says: "In every sentence is stamped the utterance of a humane, stately, and honorable gentleman." This is one of his extravagances, but any one who wishes sincerely to get away from the "pot and sponging-house" tradition had better read the 'Journey' and the Preface to the Miscellanies and perhaps one or two of the papers on public affairs which were written by Fielding in his quality of justice of the peace for Westminster. Then he may bring an opener mind to the "four great books"; may be able to perceive a man instinctively truthful and, therefore, however imperfect, never ignoble; may come to think with Mr. Henley that, in achieving these books, "a master of life, a master of character, a master of style did so nobly by his nation and his mother-tongue that he that would praise our splendid, all-comprehending speech aright, has said the best he can of it when he says that it is the speech of Shakspere and Fielding."

WESTERN SICILY.

PALERMO, October, 1903.

Though Sicily has within the last fifteen years become one of the regular tourist resorts of Europe, where hotels have multiplied, where Englishmen are counted by hundreds and Germans by thousands, it is not yet largely visited by Americans, for it lies a little off the frequented routes, and is naturally omitted by those who have only three or four months to give to their round of western and southern Europe. Some notes upon the more interesting points it presents may therefore be of interest, not merely to those who do not know the Mediterranean countries at all, but even to those who are familiar with Rome and Venice and the cities of Tuscany.

Small as Sicily is, each part of it—one might almost say every one of its principal cities—has a special and characteristic interest. To the student of ancient classical history, no spot is so attractive as Syracuse, for no event in ancient history, except the great Persian war in the beginning of the fifth century B. C., is so momentous or so dramatic as the Athenian expedition against Syracuse at the end of that same century, which has been described by Thucydides in a narrative whose condensed and tragic power is without a parallel in historical writing. The student of Greek art finds his chief attraction in the city which one is more apt to call by its Greek name of Akragas, than by its Roman name Agrigentum or its modern name of Girgenti. The mediæval history of the island concentrates itself in Palermo, where also are to be seen the finest monuments of its mediæval art. The geologist is, of course, drawn to Catania, because it is the best point for the study of the volcanic phenomena for which Sicily has long been famous, since it lies at the very foot of Ætna, and has been over and over again devastated by lava streams.

The western corner of the island is the least visited by travellers, and has no single place of first-rate importance to the devotee either of art or of science. But to the historical inquirer it has the profound interest of being the region in which the contending forces that strove for Sicily during many generations fought their longest and hardest fight. It was the battle-ground of the Semites and the Hellenes for three centuries, as it was afterwards of Rome and Carthage during the first and second Punic wars. And a thousand years later, when the Semites, now Mussulmans, were in the midst of their great advance against the Romano-Hellenic civilization of the Roman Empire, it was upon this part of Sicily that the first brunt of the Arab invasion from Africa fell. Few parts of the world have seen more slaughter by sea as well as by land than these western coasts of Sicily; and though we have no records, or very scanty records, of most of the battles and sieges, strong flashes of light fall now and then upon particular spots.

Five of these spots stand out as specially significant. One is the lofty hill fortress of Eryx, now Monte San Giuliano, above the town of Trapani. Another is the Greek city of Selinus, on the south coast, now long since a mass of ruins, near Castelvetrano. A third is the Elymian city of Egesta—in Roman times Segesta—near the modern town of Calatafimi. A fourth is the Phœnician island mart and fort of Motye; and the fifth is also Phœnician, the fortress of Lilybæum, built by the Carthaginians. It is to-day the thriving seaport of Marsala, whose Arab name recalls the fact that it was one of the strongholds of the Arab emirs who held Sicily for two centuries till the Normans drove them out. Its wine is famous; it is indeed the chief emporium of the Sicilian wine trade. Of these two last I shall not speak, because they show few traces of their ancient importance, and occupy sites less striking than the three first mentioned.

Eryx stands on the top of a mountain of limestone, 2,600 feet high, which rises immediately from the sea in the extreme northwest of Sicily. It commands a magnificent view, which in clear weather includes not only the isle of Pantellaria, but the mountains behind Cape Bon in the territory of Tunis. The slopes, everywhere steep, are in places precipitous. At the end of the hill a detached rock stands out, whose flat top is some three or four acres in extent, while its sides are sheer cliffs, and only one very narrow causeway connects it with the main hill. On this rock, which was the acropolis or citadel of the town, stood the famous shrine of a native goddess whom the Phœnicians identified with their Ashtoreth and the Greeks with their Aphrodite. All the peoples of Sicily worshipped her, as did the Romans when they came. She is the (Venus) *Erycina ridens* of Horace. Her temple, rich with countless gifts, was protected as well by its sanctity as by the strength of its position. The city is the oldest we know of in the island. It belonged to a people called the Elymi, who said, like the Romans in later days, that they were descended from the Trojans. They were too few to count for much in the strife of the great powers, Syracuse, Carthage, and Rome, that contended for Sicily. But the natural strength of their fortress, touching the sea at its haven of Drepana beneath, and commanding the west of the island, made Eryx a point of immense strategical importance. No city was more frequently besieged, none proved more difficult to capture. In the first Punic war, Hamilcar Barca, the father of Hannibal, held it for Carthage when she had lost all else in Sicily except Lilybæum, though even he, while master of the city, was unable to dislodge a small Roman garrison

from the impregnable Acropolis. It is associated with many a famous name. Dionysius the Elder took it. Pyrrhus stormed it. So did Roger, the first Norman king of Sicily; and the story goes that, in the heat of the attack on the Arabs, he saw St. Julian appear to help him—whence the town has come to bear the saint's name. The last hero on whom it has looked down was Garibaldi, who landed at Marsala a few miles to the south in 1860 to begin his famous march of liberation. To-day the city is falling—indeed has fallen—into decay. Its military value has vanished. There are still nearly three thousand inhabitants left, but one wonders that there are any, for there is nothing to do on this bare mass of limestone high up among the clouds, nothing except to tend the few goats that browse among the stones. So the people are departing. Some quarters have fallen entirely to ruin; in the others most of the houses, solid stone houses four or five centuries old, stand tenantless. Of the famous temple nothing remains except a water cistern and two or three large stones at the base of the encircling wall. A good deal of the city wall has, however, survived, and the great blocks in the lower courses seem to show Carthaginian work; they are at any rate pre-Roman. Marks which some read as Punic inscriptions are visible upon a few. In another half-century Monte San Giuliano will, if not deserted, have shrunk to a handful of people.

It has, however, outlived by many centuries as a dwelling-place of man the two other cities that remain to be described. Egesta, or Segesta as it was called in Roman times, was also a town of the Elymians, and stood inland from Eryx about ten miles as the crow flies, some three miles from the modern town of Calatafimi, and six miles from the sea at Castellamare, where it had its port. These primitive Elymians were, however, no seafaring people like the Phœnicians and Greeks, who settled beside them and became formidable neighbors. Their town is a hill fortress, covering a ridge whose top is about 1,000 feet above the sea, and 400 above the River Gaggera—a mere trickle in summer, but sometimes a torrent in winter. On the east, limestone cliffs make an almost complete natural defence; on the west the slope is steep, but a line of wall was needed to protect the town. The place is now entirely desolate, with one house only—that in which the Italian Government has placed the guardian of the ruins. Of the city and the walls scarcely anything remains, though the outline of the defences, with the foundations of a gate and those of a small temple, may be discerned. But outside the walls, on a low neighboring hill, stands a temple, not very large, but singularly dignified in its severe and simple Doric style. Its purely Greek character shows that this originally barbarian people had become Hellenized, at least to the extent of appropriating Hellenic forms; and this at an early period, for the work seems to be of the fifth century B. C. The columns are nearly perfect, but there is no interior; evidently the temple was never finished. It is a mere shell, yet beautiful, for it is rich in tone and stately in its lines. Within the walls, and crowning the northern summit of the hill (now called Monte Barbaro), is a Greek theatre, with its seats and gangways, which are still perfect, cut for the most part out of the hard limestone rock. It could hold 3,000 persons. With their faces turned towards the sea, which is framed in noble mountains, the spectators enjoyed one of the most beautiful views in Sicily.

Though neither of these remains is in itself of the first magnitude, their setting and the absolute silence and solitude that surround them make them singularly impressive, not unworthy of a city which at one point of its life affected the history of the world. When the Carthaginians controlled the northwestern coast of Sicily, and the Greek city of Selinus, planted on the shore, some twenty miles to the south, had grown powerful, Segesta found herself in danger. She feared to deliver herself wholly into the hands of Carthage, and yet she was unable to contend on equal terms with the Selinuntines, who were driving her from lands that lay along the frontier of their respective territories. When Carthage seemed unwilling to intervene, she turned to the Athenians, who had from time to time been meddling, in their spirit of restless Imperialism, with these far-western regions, where they had really no business at all, and over which, with all their strength, they were not strong enough to maintain a dominion. The Athenians, seduced by the dream of adding Sicily and perhaps ultimately Carthage, to their maritime empire, and pressed by a similar appeal from the people of Leontini, which was threatened by Syracuse, fitted out the greatest expedition that had ever quitted a Greek port, and sent it to Sicily. Its destruction there was the deathblow to Athens. She struggled on, but ultimately succumbed to the Peloponnesians; and never again recovered either the strength or the prestige of Periclean days. But for the fatal persuasions of Segesta, she might have overcome Sparta, maintained her Ægean Empire, resisted Philip of Macedon, and given a different direction to the current of events in the Mediterranean world.

Segesta had gained nothing by her invocation of Athenian help, and a few years later, when Selinus was again pressing her hard, she made a fresh appeal to Carthage. This time the great African power hearkened, thinking the moment a good one for extending her dominions in Sicily. An immense force was dispatched against Selinus. The Greeks of that city were rich and prosperous, but they had allowed their walls to get out of repair, and their Dorian brethren at Syracuse and Akragas were dilatory in coming to their help. The Campanian and Spanish mercenaries in the Carthaginian army stormed the city, and, after a gallant resistance kept up for days in the narrow streets, Selinus was sacked, the men slaughtered, the women and children sold into slavery. The walls were demolished, and though several times in later days small groups of people established themselves in the ruins, the city disappeared from the roll of Greek commonwealths. It is now, and has been for many hundreds of years, a mass of ruins, covering a ridge which abuts on the sea between the haven of the city on the east and the mouth of a stream on the west. The lines of the citadel walls and the foundations of some temples are visible. But far more striking than anything inside the city are the remains of three temples which stand outside on a hill to the east, and one at least of which was in course of erection when the city perished. This gigantic building seems to have been destroyed by an earthquake, probably in Roman times. It must have been as large as, if not larger than, any existing Greek temple. Its fallen columns, pediments, and architraves, wildly tumbled over one another, resemble one of those tremendous rock-falls which may be seen in the Alps rather than any work of human hands. It is hard to believe, when one gazes at this evidence of the wealth and public spirit and patriotic pride in their town of the old Selinuntines, that their territory was probably only some thirty miles in circumference, and that the free male citizens were probably not more than twenty thousand in number. The community that conceived and executed such a majestic group of works as these three temples on the hill deserved a better fate than to be thus blotted out forever by a barbarian foe. Yet these catastrophes were common in the ancient world. When Segesta offended the tyrant Agathocles of Syracuse, he seized ten thousand citizens and butchered them in cold blood on the banks of their river, just as Abdul Hamid, keeping himself more adroitly in the background, massacred his Armenian subjects in 1895.

No ruins, not even those of Egypt, give a greater impression of a remote antiquity, totally disconnected from our modern world, than do these majestic relics of the Greek city and her Elymian neighbor. The Roman work which one sees in Italy, France, and Spain seems near to us, because there is no break in the historic chain of influences and institutions which links Rome to contemporary Europe. But between us and the old Hellenes of Sicily there seem to be no such links. Rome comes in and breaks the continuity; the Arab conquest breaks it a second time. Partly, perhaps, in this remoteness, in this sense of the far-off brightness and joy (followed by the blackest gloom) that once lit up this now silent shore, lies the infinite pathos of the uncovered ramparts and fallen temples of Selinus.

Correspondence.

THE *NATION'S* JUBILEE.

To the Editor of The Nation:

Sir: I beg to express to you my cordial felicitations on the occasion of your excellent review's 2,000th-number jubilee.

Yours faithfully, Claes Annerstedt,
Librarian of the Royal University.

Upsala, November 11, 1903.

[Felicitations from such a source are excusably made public. We return our thanks to the distinguished historian of the ancient University of Sweden.—Ed. Nation.]

"CONVEY" THE WISE IT CALL.

To the Editor of The Nation:

Sir: In view of the testimony given, by those seemingly conversant with the facts at the official inquiry into the birth, life, death, and destruction of the United States Shipbuilding Company, I venture to think that a new word can now properly be coined, to more fittingly describe the *modus*

operandi by which this "North Sea Bubble" and other like watered combinations have or may be blown, bought, and "busted."

I submit, with confidence, the word *Schwab* (n.), *To Schwab* (v.), *Schwabbed* (p. p.).—Respectfully,

THOS. W. HEATLEY.

CLEVELAND, O., November 27, 1903.

THE "NEW" CRIME.

TO THE EDITOR OF THE NATION:

SIR: I have the volumes of *Frank Leslie's Weekly* for the years 1861-1866. I happened lately to refer to the 1864 volume, when I noticed an item on page 355, headed, "Southern": "In Ware County, Ga., on January 24, a negro was burned to death for an assault on a white woman."

I looked through the other volumes and found in that for 1866, page 403: "The negro who committed a diabolical murder of a white girl and boy in Union County, Arkansas, was followed and arrested. After the proper examination, he was burned to death." F. P.

Notes.

'Dollars and Democracy,' announced for publication in the spring by D. Appleton & Co., will sum up Sir Philip Burne-Jones's impressions of American social and political life during his recent sojourn in this country. Sixty full-page drawings of the author's will illustrate the volume. At the same date will appear 'How to Know the Oriental Rugs,' by Mary E. Langton.

Shortly forthcoming from the Oxford University Press are the third series of Dr. E. Moore's 'Studies in Dante'; 'Horace for English Readers,' in a prose rendering by Dean Wickham; and two additions to the Oxford Miniature Poets series, viz., Keats's poems, and Shakspere's works in three volumes, all on Oxford India paper.

Under the somewhat fantastic title of the "Library of Noble Authors," the Chiswick Press is sending out a series of notable reprints of English classics (New York: Scott-Thaw Company). The form chosen is that of a small folio with rough edges. The paper used is of a beautiful, apparently hand-made linen. The type is large and generous, suggesting the early days of printing, but not sacrificing anything of clearness to a slavish imitation. The margins are broad, furnished with copious side-headings in red italics. The binding is a modest drab muslin. Altogether the volumes are a joy to handle, and in these days of "cheap and nasty" bookmaking they should be welcomed as a contribution to that sentiment of affection for the great books of our literature which seems in danger of extinction. We have before us Sir Thomas More's 'Utopia.' The text is made up first of a reprint from the second edition of Ralph Robynson's translation in 1556, then of the Life of More by William Roper, and finally of thirteen letters, mostly to or from Margaret Roper. The text of the Life was prepared by Mr. George Sampson from four manuscripts in the British Museum. The letters have been taken from Rastell's folio of More's English works. Whatever idea the publishers may have had in mind in using the phrase "noble authors," certainly the chief impression of all the material here collected is of a rare nobility in character and feeling.

'Three Masques by Ben Jonson: of Oberon, of Blackness, and of Beauty,' is a handsome quarto reprint, vellum-bound with tie-bands. The publisher, Mr. Robert Grier Cooke, has chosen a distinctive fount of type, thin but evenly black, and without serifs. For comfortable reading it is too large and loose, but it is very decorative, especially when employed with the smaller fount. The absence of headlines seems to us a defect, but opinions will differ as to this point. The paper is the best; the single illustration a facsimile of Houbraken's portrait of Jonson. Of the rubricated editions one hundred and twenty-six are offered. Twenty-six have illuminated title-pages and initials. Mr. Bamburgh's practice of this art is intelligent. His letters suit the page, and, if not elaborate, are of workmanlike execution. Many will doubt, however, if hand illumination is the proper adornment for a printed book. The early examples simply show that printing had not struck its gait. All in all, taste and care have presided over this pretty edition of the Masques. It should not be confused with the many routine imitations of the Kelmscott printing.

Turgeneff has become, like Balzac and Victor Hugo, an English classic, to be enthroned in library editions. Following close upon the translation by Mrs. Garnett, published by Heinemann, comes a new version by Miss Hapgood, printed at the De Vinne Press for the Scribners, of which four volumes have reached us. In external features this American edition is certainly superior to its English predecessor. Paper, presswork, and binding are all admirable for books intended to be artistic yet not inaccessible. Whether the new edition is superior also in the weightier matters of the law, we must for a little while postpone judgment.

'Barbizon Days,' by Charles Sprague Smith, which we reviewed a year ago, is reissued by its publishers, A. Wessels Co., apparently from the same plates, and with no other change than that of the date on the title-page, except that a tint has been printed under the cuts, there is a little freer use of red ink, and the cover design is new. It bears no intimation that this is a second edition, or other than a new book.

The plates, photogravure and other, make Mrs. Meynell's 'Children of the Old Masters: Italian School' (E. P. Dutton & Co.) an acceptable gift book. There are ten photogravures and some forty-odd half-tone plates, and they give a fair survey of the treatment of children in Italian art for some three hundred years and in a number of different schools. Mrs. Meynell is concerned only with the figures as representations of childhood, and from that point of view is right in condemning much that is very beautiful in other ways. She is not bound to explain that Raphael is composing decorative arrangements of line, and uses his baby figures as freely for this purpose as he would any other ornamental form, though she does hint at it. As babies, she pronounces those of the early Tuscan sculptors most satisfactory, and, after them, those of the Venetian painters. It is not till one reaches the decline of art, with Bronzino and the portrait painters, that she finds the Florentine painters doing justice to the characteristic attitudes of childhood, and forgetting to be clever and graceful. She writes pleasantly, if somewhat diffusely, and has been fairly well treated by the publishers, though the variety of paper and the arrangement of the plates (sometime in bunches of two or three together) prevent the neat, thin quarto from being an altogether successful piece of bookmaking. There are puzzling references, once or twice, to illustrations which do not appear in the volume—an oversight to be regretted, as the reader is set to looking for the missing plates and is discontented when he does not find them. The striking out of a few words from the text would have remedied the evil.

The Scribners publish 'Eighty Drawings, including The Weaker Sex,' by C. D. Gibson. This is the eighth in the series of those volumes of Mr. Gibson's work which have become an essential part of the holiday season, and contains, besides the cartoons from *Life* and *Collier's*, the usual supplementary sketches, mostly heads of such pretty girls as Mr. Gibson contrives to make prettier each year, difficult though the task must be. On the whole, we take this volume to be the best of the series, though not on account of "The Weaker Sex," which does not interest as much as some of the previous sets of drawings. The artist's pet mannerism—the placing of the eyes too low in the face—is of service in giving an air of archness and a kittenish look to his heads of young women, but it does not succeed so well in the face of his hero. It is in the more frankly comic drawings that Mr. Gibson seems to us at his best; some of his slightly caricatured types being wonderfully good, and his satire often capital. The greater humorous draughtsmen have been dying off with alarming rapidity of recent years, and Mr. Gibson is almost the only one left to the English-speaking peoples.

'The Art Album of the International Studio' (John Lane) is a collection of one hundred plates, republished from that magazine, in an illuminated cover. The kind of art in which the *Studio* glories is pretty well known, and those who like it may like to have this collection. There are good things in it, but the extravagances of design and color in which the artists indulge are not less conspicuous in bulk than they were in detail. The publishers have put themselves to no great trouble or expense of bookmaking, the plates being simply bound together without titles or artists' names, table of contents, or any other aid to identification. One must guess at the subject of any drawing, and if one wants to know whose work one is looking at, one must search for the signature; in case of its absence or illegibility (both frequent) one must guess again.

The extreme partiality of M. Camille Mauclair for the work of the impressionist school of painting especially fitted him to write the little book on 'The French Impressionists' which forms a part of E. P. Dutton's "Popular Library of Art"; it has especially unfitted him to write the larger book on 'The Great French Painters and the Evolution of French Painting from 1830 to the Present Day,' which is now brought out by the same publishers. In their advertisement the publishers say that "an authoritative treatise on Modern

French Art (1830-1900) has long been called for." Such a treatise they have not supplied. What they have given us is rather a piece of special pleading—something almost in the nature of a tract. The very list of illustrations is significant. Out of the 112 reproductions in the book, 46 are of works by artists strictly identified with the impressionist movement, and more than a dozen others are after artists more or less connected with or influenced by it; that is, about one-half the illustrations given of the whole French school of the last seventy years are allotted to this small group of painters. Taken in detail, the list is still more surprising. The leaders of impressionism are fully illustrated, Manet, Monet, and Degas having nine pictures each and Renoir eight. Millet is the only other artist who fares so well, he also having nine illustrations, while Corot has but four and Rousseau two. If we pass from the Barbizon school to some of the more celebrated masters of a more conservative type, we go still more rapidly down the scale, with J. P. Laurens, two; Gérôme, Bonnat, and Carolus Duran, one each; and Meissonier, none at all. The text is even more one-sided than the illustrations, and some of the latter are, apparently, printed only as horrid examples; the author taking pains to point out how poor the work illustrated really is. The translation is not competent, and reaches the grotesque when Puvis de Chavannes's "Poor Fisherman" masquerades as "The Poor Sinner." To any one, however, who cares to see what French art looks like when seen, as it were, through blue spectacles, the book may be not without its value.

'The Shenandoah Valley and Virginia, 1861 to 1865,' by Sanford C. Kellogg, U. S. A. (New York and Washington: The Neale Publishing Co.), is a running account (with occasional comments upon their military significance) of the incessant manœuvres and battles which occupied the valley from the time, in April, 1861, when Stonewall Jackson established a camp of the Confederacy at Harper's Ferry until the breaking up and capture of Jubal Early's little army at Waynesboro', on the 2d of March, 1865. The narrative is spirited, and affords a convenient summary, within the compass of some 250 pages, of operations which bore with great importance upon the rest of the army movements in Virginia, since a raid of Confederate troops dispatched from Richmond when the Army of the Potomac became too threatening to Lee's lines, towards Maryland and Pennsylvania, many a time compelled the detachment of Union forces to meet the danger, and so necessitated a suspension of other important activities.

'The Life in Kansas and Death as a Spy of Spencer Kellogg Brown,' edited by George Gardner Smith (D. Appleton & Co.), is a story drawn from his own journal and letters—with some correspondence of other members of his family—of one who went as a boy of thirteen with his father's family to Kansas, in 1855, at the outset of the conflict between the Missouri Border Ruffians and the New England settlers, who were resolved that this Territory should be kept from slavery. Brown's father was Orville Chester Brown, who was the first settler of the place (near the Osage and Pottawatomie Rivers) which he called Osawatomie, and which presently became the dwelling-place of the more famous John Brown and his stalwart sons. (They do not seem to have been kinsmen.) This boy, after sharing in the tragedies which swept over Kansas for five years, closing with a protracted drought which reduced thousands of the people to the verge of starvation, enlisted, in 1861, in the troops which formed the army of Gen. Nathaniel Lyon, and wrote with spirit of the first movements of that energetic officer against the secession camp in St. Louis. Later he enlisted in the gunboat fleet on the Mississippi, and made some daring ventures into the enemy's lines as a spy, in the course of one of which he was taken prisoner, and, in September, 1863, was hanged at Richmond, at the age of twenty-one. The story contains much matter which is of purely family interest, of no historical significance; and in the main belongs to the type of biography illustrative of the patriotic temper, inspired by earnest religious feeling, of many of the Union volunteers in the civil war.

Contemporary methods of critical text-study are excellently illustrated in a group of essays by M. Joseph Bédier (Paris: Armand Colin), in the preface to which the author seems to take some credit to himself for having preferred a scientific procedure to the "divinatory operations" of literary taste. The results of his 'Études Critiques' are therefore singularly uniform and, in the main, convincing. To the majority of readers the inquiry into the authorship of the famous 'Paradoxe sur le Comédien,' commonly ascribed to Diderot, and the examination of the literary sources made use of by Chateaubriand in his works on America, will certainly prove most entertaining. By an ingeniously elaborate sifting of the various kinds of correction or interpolation in the manuscript of the 'Paradoxe,' M. Bédier seeks to refute the comparatively recent hypothesis that this work was written not by Diderot, but by Naigeon, his friend and amanuensis. The case of Chateaubriand resolves itself in M. Bédier's hands into an exposure of, to say the least, exceptionally free "lifting." Having proved to his own satisfaction that Chateaubriand's American itinerary was impossible in the time allowed, his unsparing critic collates passages from the 'Voyage en Amérique,' etc., with extracts from Charlevoix, Carver, William Bartram, and others; all which is perfectly irrefragable, for the coincidences are too many to be fortuitous. We have even discovered some unnoticed by M. Bédier; for instance, "Les Natchez," ch. 1, with Bartram's account of strawberry picking (Pt. II., 3). But Chateaubriand, like Dumas, improved what he made his own.

'La Société Française au XIIIe Siècle,' by M. Ch. V. Langlois (Paris: Hachette), opens with an accurate and well condensed introduction explaining the methods through which the life of so long-past a century can be presented to a modern reader, with the help of romances of adventure abounding in concrete detail. Distributing his selection over practically the whole area, included in ten good stories, M. Langlois furnishes a large and varied amount of matter, from which, however, nothing more than somewhat confused impressions are obtainable, for we are here offered only faithful, partly modernized, renderings of tales, without specific application of the criteria dwelt on in the introduction. In other words, how shall we learn to accept and reject, since the author himself slips out of his obvious task?

Dr. A. Warburg won his spurs years ago with an essay on Botticelli's "Birth of Venus" and "Spring" (Hamburg and Leipzig: Leopold Voss, 1893), the literary and classical sculpturesque inspiration of which he endeavored to trace. That is now an old story, and his results have proved fruitful to later research. Since then, Dr. Warburg has devoted himself chiefly to the entertaining task of reconstructing the holiday life of Renaissance Florence, and he has not neglected the field of art as a source of information. Nor is there anything unsuitable in the exploitation of the work of art as a document in the history of civilization, provided that neither the writer nor his readers confuse this pursuit with the æsthetic and intrinsic interest in art. More recently, Dr. Warburg has been devoting his attention to Florentine iconography, and in his latest pamphlet, 'Bildniskunst und Florentinisches Bürgertum: Domenico Ghirlandajo in Santa Trinita; die Bildnisse des Lorenzo de' Medici und seiner Angehörigen' (Leipzig: Seemann), he succeeds in identifying several portraits and in guessing at as many more among the figures in Ghirlandajo's frescoes in the Sassetti Chapel in Santa Trinita at Florence.

Professor Schulte of Bonn, the head of the Prussian Historical Institute in Rome, in his researches in the Vatican Archives, to which, as a representative of a friendly Power, he had exceptional access, recently discovered a lot of documents referring to the Indulgence trade of 1517, which formed the outward occasion for the outbreak of the Reformation. They consist of a large number of bills and receipts, originally from the banks of the Fuggers, the greatest financial house of the time, which prove beyond a doubt that the Curia received one-half of all the funds collected from this sale, the other half going to German princes and ecclesiastics. The documents were so compromising for the Roman Catholic Church that Schulte appealed for instructions as to publication to the Prussian Cultus Minister, who gave his decision in the word, "Ignoriren." This was all the more remarkable in view of the fact that the custodian of the Vatican Archives, the German Jesuit Ehrle, had advised the publication of these documents in the interests of impartial history. The conflict of duties resulted in Schulte's resigning his position in Rome and returning to his work in Bonn. Whether the Vatican authorities will publish these capital finds is as yet uncertain; but Catholic savants, such as the historian Janssen, have in their writings recognized this nefarious business as a fact on the basis of other sources.

Professor von Soden, of the Berlin University, while on the hunt for New Testament manuscripts in the East about two years ago, was fortunate enough to find in the inner closed chamber of the chief mosque of Damascus a whole mass of documents, which, at the solicitation of the German Emperor, were entrusted to the Berlin Museum. Von Soden, with the coöperation of Bruno Violet, who has devoted a full year to these manuscripts, has now made a report of his findings to the Royal Prussian Academy of Science, the results being pre-

sented by Professor Harnack. The collection includes among other treasures the following documents: (1) Latin liturgical works, with musical notes, from the 10th to 12th centuries; also, Latin letters of Baldwin King of Jerusalem, and an old French hymn of 88 verses; (2) a large collection of Hebrew works, religious and profane, synagogical literature and fragments of the Scriptures; (3) some most valuable Samaritan texts, including a calendar and Pentateuch fragments; (4) large fragments in the Armenian language, consisting of twenty Psalms, a large portion of Matthew, and parts of the Church Fathers; (5) several Egyptian Coptic writings; (6) Syriac literature abundantly represented, some of the works being palimpsests with Arabic underwritings; (7) fragmentary Greek ecclesiastical writings, with portions of Homer, portions of the Septuagint, New Testament extracts, all in majuscule writing—among these also a selection from the gospel of John; (8) most valuable of all, a fragment in the Palestine-Aramaic language.

'Spemann's Kunst-Kalender' for 1904 (New York: Lemcke & Buechner) is of the pad variety, and is supplied for every day of the year with a picture of some work of art, embracing in the bulk a large part of the world in many ages. By a *tour de force*, something informing and sensible is written about each plate, ancient, mediæval or modern. There is a mine of instruction in this gallery, which should prove popular.

—Dr. Buckley's study of fanaticism in the United States is the main contribution of serious interest in the December *Century*. There is a quite unconscious humor in his citing as fanaticism Wendell Phillips's famous reading of the formula, "God Save the Commonwealth of Massachusetts." The second instalment of the Thackeray-Baxter correspondence has many bits of piquant interest, such as the comment on Professor Agassiz, "a delightful *bonhommious* person, as frank and unpretending as he is learned and illustrious in his own branch"; "My praises of American women are going all about the town, and Lady Stanley says are outrageous"; "Curtis's article touched me very much. I hope that is the right view of the character. So with all its shortcomings may God Almighty find it and deal with it. And I like to think that I have left that sort of good opinion behind me amongst those I love in your country." Thackeray's first letter from Charleston shows him quite naturalized in talking of "niggers," and please God he will soon "be able to say that people here are not all cruel" (*scilicet*, slavery is not as black as it is painted). André Saglio contributes an article on the Bigoudines of Brittany, that strangely persistent fragment which remains as the only living witness to perhaps the earliest traceable wave of westward-moving population in prehistoric Europe. M. Saglio is said to have been struggling with the problem for some years, but demonstrably certain results are still meagre. The editor makes the bicentenary of Jonathan Edwards the occasion for a few words on religious tolerance, with a plea that the growth of this virtue may not be allowed to bring in an era of moral indifferentism.

—The Christmas *Scribner's* eschews the strenuous, and gives itself up to stories, poems, travel, and description. Henry van Dyke's "Ode to Music" is, perhaps, the most notable contribution. Frederick Palmer describes Buda and Pest, "one of the newest of cities, joined by a hyphen and five bridges to one of the oldest of capitals." E. C. Peixotto furnishes the illustrations, among which some of the native men and women are especially effective. Edward Penfield furnishes both text and illustrations (reproduced in color) for a view of "Holland from the Stern of a Boeier." In the "Field of Art," Russell Sturgis and Frank Fowler comment on Mr. Sargent's recent addition to the decoration of "Sargent Hall," at the head of the stairway in the Boston Public Library. The two are one in their high praise of the work, and in the opinion that it shows a distinct advance in adaptation of the artist's powers to the peculiar demands of the subject and situation, as compared with the work completed eight years ago in the other end of the gallery. Mr. Sturgis is somewhat pessimistic as to the chance of getting a satisfactory view of these decorations when the completion of the work shall have subtracted, from the already insufficient light, the little that is now gained by reflection from the bare walls.

—Professor Lounsbury's discussion, in the current *Harper's*, of the question whether English is becoming corrupt seems to put him on the side of the easy policy of "lettin' Natur caper." At least the efforts of Jonathan Swift and others who have troubled their minds over supposed corruptions in the mother tongue seem to him but empty beatings of the air. It is easy enough to show the errors in Swift's diagnosis, and the futility of some of his plans for improvement; but the apparent assumption that conscious effort on the part of intelligent users of a language is a negligible quantity in its development is questionable. J. C. Thompson makes a plausible plea (*pro domo sua*) for the collection and publication of Tennyson's intentionally suppressed poems. The chief point is that, aside from their inherent worth as poetry, they are necessary to a proper understanding of the poet's development, and the more so because the poems which we have in authorized editions were so largely rewritten and improved after their original composition. But, after all, we get from the waste basket of these earlier years merely the material evidence that, with added experience of life and art, poets, as other men,

> "may rise on stepping-stones
> Of their dead selves to higher things";

a truth which could hardly be questioned in respect of such a man as Tennyson. Mark Twain's "A Dog's Tale" begins as if the sole intention were to burlesque the Thompson-Seton style of animal stories, and ends with a first-class anti-vivisection document. The reversal is scarcely artistic.

—The principal feature of *McClure's* for December, from our point of view if not from the editor's, is the first of a new series of Mr. LaFarge's ever delightful articles on art, entitled "One Hundred Masterpieces of Painting." On the cover it is called "The Hundred Greatest Pictures"—a title which we may be sure Mr. LaFarge never sanctioned. His catholicity of taste and dislike of positive statements would make him the first to revolt against the notion that any possible hundred pictures could be "the greatest." His point of view in the present series is indicated in his opening sentence: "The contemplation of art is a form of study of the history of man." His aim has been to select such pictures as throw the greatest light either on the actual life or on the ideals and aspirations of other times, "choosing, as far as possible, such as might well be called masterpieces, or works of extraordinary merit, partly because the greater works carry on more thoroughly the life of all mankind, apart from small fluctuations or disturbances which are evanescent, however important they have seemed for a time." We have given this last extract in full because it is so characteristic of the carefully guarded and qualified manner in which Mr. LaFarge thinks and writes. In writing of "Portraits of Civic Life," then, in this present instalment, he discusses the Corporation Pieces of Hals and Rembrandt and Van der Helst with regard, principally, to their historic and human interest, and only incidentally as illustrations of artistic methods. Minor technical matters he disregards altogether; but his wide knowledge of art and his many-sided sympathies make themselves felt, and we get from his gentle pages a truer evocation of the artistic personalities he is dealing with than any other man could give us, while the charm of his style is such that we could be content to listen to that alone, though he told us much less than he does.

—Spurious memoirs are no novelty in literature, but the deliberate manufacturing of them has only recently become a recognized branch of the publishing business. Four years ago, in reviewing 'The Martyrdom of an Empress,' we pointed out, from intrinsic evidence furnished by the writer's absolute ignorance of Austrian matters, the questionable character of the book. We now have a "companion volume," by the same biographer, on the Emperor Francis Joseph, bearing the title of 'A Keystone of Empire' (Harpers). 'The Martyrdom of an Empress' purported to have been written by a woman to whom the unhappy Elizabeth disclosed her inmost secrets; in the 'Keystone' the impression conveyed is that of an ubiquitous aide-de-camp who is within earshot during a seventeen-page "heart-to-heart talk" between the Emperor Ferdinand and the Archduchess Sophia, when the Emperor "would have sincerely preferred an encounter with a virago from the slums, flying at him with oaths and curses, or tearing him bodily like a wildcat"; who has often accompanied Francis Joseph "in the glorious hours of cross-country racing," and has seen him save "scores and scores of human beings" during the inundation of Szegedin. But as we listen to the aide-de-camp's wonderful recitals, he suddenly (p. 176), after an outburst of one of Elizabeth's confidences (she figures also in the 'Keystone'), changes back into a woman: "I felt all the disgust of a childless woman for a mother's implacable jealousy; but now that I have a tall boy of my own, who in a few short years will have reached a marriageable age," etc., etc. This change is no more surprising than that of Francis Joseph himself, who in the 'Martyrdom' was the heartless tormentor of his wife, while in the 'Keystone' he is an angel of light and only now and then "a man, made of flesh and blood." With the sex of the author left in doubt, it is not surprising that the style

is not always the man. The 'Martyrdom' read like a caricature of Luise Mühlbach; the 'Keystone' is a travesty of the Bowery melodrama. Only one thing remains unchanged: the ignorance of the author, in spite of her surface acquaintance with Vienna newspaper gossip and the reported tittle-tattle of Austrian court life. She—for her portrait has been made public—who professes to know every thought and action of Francis Joseph and Elizabeth, misquotes the first line of the present Austrian national hymn which every child of eight in Austria knows by heart, does not know the rank of the present Austrian chief-of-staff, and speaks of Taaffe (whose name she misspells, as she does dozens of German words) as "one of Austria's greatest prime ministers." She boldly dedicates this patchwork "to his Majesty Francis Joseph, Emperor-King of Austro-Hungary [*sic*], in memory of former days"! What next?

—The Royal Society of London has published the first number of "Reports of the Sleeping-Sickness Commission," whose investigations have been carried on at Entebbe, Uganda. In a preliminary note, Dr. Aldo Castellani gives an account of his discovery last November of a living trypanosome in the cerebro-spinal fluid taken during life from a patient with a well-marked case of sleeping sickness. Subsequent observations showed the presence of trypanosomes in twenty out of thirty-four cases. The trypanosome found, while not apparently differing materially from the species existing in the blood of persons with trypanosoma fever *(Trypanosoma Gambiense)*. may possibly be differentiated from it, as the micro-nucleus lies nearer the extremity and the vacuole is larger. From the progress report of Lieut.-Col. David Bruce and Dr. David Nabarro of the commission, it appears that trypanosomes are present in the cerebro-spinal fluid in all cases of sleeping sickness in Kavirondo as well as in Uganda. Further investigations show that the parasite occurs not only in the cerebro-spinal fluid, but also in the blood of sleeping-sickness cases. In trypanosoma fever there are trypanosomes in the blood, but that malady, which is characterized by a slight rise of temperature, causes little or no inconvenience, while sleeping sickness is a well-marked disease and is invariably fatal. Apparently, either the trypanosomes found in sleeping sickness and those existing in trypanosoma fever belong to different species and give rise to different diseases, or they are identical, and, if confined to the blood, simply occasion slight feverish symptoms, whereas if they gain entrance to the cerebro-spinal fluid they cause sleeping sickness. The commission does not attempt at this stage of the inquiry to settle this question, but hopes for a solution before long. The means by which the disease is disseminated is also a subject of inquiry, and the existence of trypanosomes on tsetse flies freshly caught in the vicinity of Entebbe suggests that they may be carried by these insects. The report contains the clinical histories of twenty-one cases and of numerous experiments on monkeys, and is illustrated with half-tones and colored plates.

—Rarely can it have fallen to a man of eighty-three to produce his *magnum opus*. Yet it is not probable that Dr. E. H. Gifford would regard any of his previous publications, numerous as they are, as in any way to be compared with the monumental edition of the 'Præparatio Evangelica' of Eusebius of Cæsarea, which has just been issued by the Clarendon Press in five volumes and 2,730 pages. In it he has given a piece of work thoroughly satisfactory at all points. He has constructed a new text on the basis of new collations covering the entire MS. field, and following, but with independence, the traces of Heikel and Diels. To the text he has added an English translation, the only one in a modern language except the antiquated rendering into French by Séguier. A volume of commentary follows, and the whole multifarious content is made accessible by several elaborate indices. That this book appears for the first time in a satisfactory edition, and, above all, in translation, is only less astonishing than the industry of its present editor, for the accumulation of massed and clotted learning which Eusebius has preserved to us here is one of the most considerable in all ancient literature. Its numerous and lengthy quotations make it, perhaps, our most important source for early philosophy. It has preserved for us Sanchuniathon—or what would pass for him—by far the most considerable fragment from the lost letters of Phœnicia. Here, too, we find the largest of the three fragments of Euemerus which time has spared, oracles, scraps of mythology and folklore, and bits from poets, major and minor. In all this Eusebius builded better than he knew, striking as the conception and execution of the 'Præparatio' are. And now Dr. Gifford gives to it almost 600 pages of very necessary commentary. If, as he modestly pleads, he is neither historian, poet, philosopher, archæologist, astronomer, nor ethnologist, he has shown himself a good substitute for all. Something of all there was certainly needed for this task. No single scholar could exhaustively comment on so vast a farrago as we have here; Dr. Gifford has produced an admirable bit of pioneering work.

THACHER'S COLUMBUS.

Christopher Columbus: His Life, his Work, his Remains, as revealed by original printed and manuscript records. By John Boyd Thacher. G. P. Putnam's Sons. 1903. Volumes I., II., royal octavo.

The Hon. John Boyd Thacher of Albany is probably best known to contemporary fame as one of that small but worthy body of American publicists who aspire to add to the services they have rendered in official political stations by making further contributions to the general welfare through the writing of books. His name is better known in the widening circle of book collectors as that of the owner of an important library, illustrating the history of printing and the discovery and settlement of America. Mr. Thacher's library is currently reputed to rank in the very first class, in regard to both the number and the quality of its treasures. It is doubtful whether the owner of any other library of its size in this country has shown equal judgment in determining the especial lines along which to develop his taste for book-buying, or in picking up the scattered volumes necessary to make a well-rounded and comprehensive collection upon the chosen subjects. There is less doubt that none of Mr. Thacher's rivals in the bookshops and the auction room have shown so thorough a realization of what his treasures signify, individually and collectively, as the abiding witnesses of literary and historical progress. It would be difficult to name any other American collector who has expended equal sums for the acquisition of bibliographic treasures, who has given such good proof of understanding why each volume has a proper and necessary place upon his shelves. Mr. Thacher has attained to an eminent rank in the annals of book-collecting in this country, as an exemplar of the true bibliophile, sharply contrasted with the mere lover of rare and costly possessions. Secure in this position, he apparently also desires to become known as the historian of the Discovery of America.

It is not easy to convey an adequate or a fair idea of Mr. Thacher's 'Columbus,' the first two volumes of which contain 670 and 698 royal octavo pages of from four to seven hundred words each. They constitute a remarkable storehouse of information of every conceivable variety, relating in all sorts of ways to the subject on the titlepage. The student who is in some degree familiar with the uncounted volumes which have treated of Columbus, will find in this latest contribution a good many things, including a few of the highest importance, which had not before been so readily accessible for the purposes of study and comparison. The beginner in Columbian research, and the general student away from libraries which possess the standard works on the period of discovery, will find in Mr. Thacher's volumes nearly everything, in the way of sources of information, needed to secure an adequate idea of what Columbus accomplished and how he did it. Some of this material had not before been published in English.

Mr. Thacher begins his great work with an introductory section, in which he gives an account of the two historians, Peter Martyr of Anghiera, and the Bishop of Chiapas, Bartolomé de las Casas, from whose writings the later narrative chapters are largely abstracted. In this section, as throughout, the author seems to have limited his researches to the sixteenth-century sources, neglecting almost entirely the writings of modern investigators, whose names are rarely mentioned in the numerous foot-notes. The result is, that Mr. Thacher appears to have done a large amount of quite unnecessary work which had already been very well done by others. An inevitable consequence is shown in the two chapters given over to a refutation of certain statements made by Hallam, sixty-odd years ago. Students of the later Renaissance long ago perceived that many of Hallam's opinions were based upon insufficient data, and ignored them because they in no wise affected the fundamental value of his epoch-marking work. A careful reading of the passages demolished by Mr. Thacher should be quite sufficient to convince well-informed readers that they scarcely deserve serious attention, least of all at this late day. The chapters on Hallam are unfortunately characteristic of many others in these volumes, which treat of matters that were long ago left by the historical wayside. It would probably be unfair to cite as an illustration of this, although the temptation is strong, the re-

peated attempts to beat down Mr. Henry Vignaud's "Toscanelli Letter" mare's-nest. It is already become difficult to realize that ten months ago the most prominent English scholars, old and young, were deeply stirred with anxiety to refute Mr. Vignaud's contentions.

The main portion of Mr. Thacher's work deals with the voyages of Columbus. His method is, treating each voyage separately, to describe firstly the sources of knowledge, then to give a brief account of the voyage in question, and to conclude with the principal text or texts from which the earliest information is derived. For the sources, Mr. Thacher confines his attention wherever possible to the contemporary printed books, and to manuscripts printed many years ago in books that are now becoming scarce. He expresses more than once a deeply rooted belief that all manuscripts are of worse than doubtful value, partly because they may have been tampered with for the sake of falsifying history, but chiefly because they were not necessarily subjected, as Mr. Thacher conceives all printed books to have been, to miscellaneous public scrutiny and criticism at the time they were written, so that the untruths in the manuscripts had no chance to be exposed by those immediately concerned. This theory, that whatever is printed must perforce give a true account of contemporary knowledge, throws a serious responsibility upon every one who has occasion to utter the feelings of Mr. Thacher's own contemporaries regarding the untrustworthiness of his published works.

The elaborate bibliographic description of the printed sources, most of which are in the author's library, is followed by an outline narrative of events, taken from the earliest historians, with notes of variant or conflicting evidence, but without attempting, beyond an occasional statement of the author's personal opinion, to explain or harmonize the inconsistencies. These bibliographic and narrative chapters serve as introduction to the documentary texts, which are reprinted in the original languages, followed by an English version, excepting where the text is so long that there is room for only the English translation. There is no statement of the sources from which these texts were copied, although the occasional allusions to Navarrete leave no doubt that his collection of documents was used for such manuscripts as it was necessary to include. The obvious opportunity to do a great service to scholarship by verifying the accuracy of Navarrete's copyists probably did not occur to Mr. Thacher. The translations are for the most part faithful literal renderings, with just enough slips and oversights to show that the work was apparently done independently of previous translations. As Mr. Thacher only once mentions any other English translation, and that one which he reprints verbatim from a volume privately printed by James Lenox, it may be assumed that he made no use of other translations for the purpose of checking the accuracy or sufficiency of his renderings. His modest hesitancy about mentioning the fact that an American native was "accustomed to go without vestments" in translating the Latin *ipsi nudo* on page 68, or in translating other curious but ethnologically significant statements, *e. g.*, on pages 67 and 211 of volume one, do not increase confidence in the scholarly nature of the work.

Mr. Thacher's failure to cite authorities, except such as interest him bibliographically, is a serious matter for students who have a right to expect to find these monumental volumes of some use for the purposes of historical research. This failure is the more surprising because the volumes are dedicated to Henry Harrisse, who, more than any other worker in the field of American history, has set the mode in this respect. Harrisse's many publications are, as every one knows, unsurpassed examples of careful statement supported by detailed citation of exact authorities. It is equally well known by every one who has read anything about Columbus beyond the school text-books, that such a work as Mr. Thacher has produced could not have been prepared without using Harrisse's books. Yet, excepting for the words "To Henry Harrisse" on the leaf following the title, a reader might peruse these thirteen hundred pages without gaining the slightest notion of the position Harrisse occupies in Columbian literature. Indeed, one is tempted to wonder whether Mr. Thacher may not have set himself the curious, but totally useless task of attempting to make a Columbus book without looking into Harrisse's publications. In the first volume there are two references, on pages 244 and 250, to Harrisse's 'Christophe Colomb,' upon which practically everything written about the discoverer since 1884 has been based. There are two more in volume two, on pages 8 and 371. Oddly enough, this is exactly the same number as that of the references to Mr. Frederick A. Ober's writings. Even more incomprehensible is the failure to mention 'The Diplomatic History of America: Its First Chapter' in connection with the discussion of the line of demarcation. Mr. Thacher's account of the several papal bulls which concerned the Spanish-Portuguese discoveries contains certain radical and extremely pertinent suggestions, some of which are likely to secure the ultimate approval of historical scholars. Yet there is not the slightest hint of the unquestionable fact that, without Harrisse's 'First Chapter,' insufficient and mistaken as that pioneer work has been proved to be, Mr. Thacher's pages could not possibly have been written. In a work outwardly presenting all the pomp and show of learning, an author has no right to withhold information regarding the sources from which his opinions are derived.

The most important feature of Mr. Thacher's volumes is their facsimiles of publications and manuscripts relating to Columbus. Some of these had not before been reproduced with photographic exactness, and most of them are nowhere else so readily accessible. The quarto edition of the "Columbus Letter" in Spanish, preserved in the Ambrosian Library at Milan, the "Libretto" describing the third voyage and the "Lettera" on the fourth voyage, both in the San Marco Library at Venice, are now published in facsimile for the first time, and all who are interested in Columbian bibliography have been placed under an inestimable debt of gratitude to Mr. Thacher for his successful efforts to make these priceless treasures available for the purposes of comparative study. Besides these, the volumes contain a large variety of facsimiles of titles, printed pages, and manuscripts. All are useful as being exact pictures of important statements made by or about the discoverer of America. They give those unaccustomed to handling the originals an idea of what the material for historical study looks like. Their value for this purpose is but slightly marred by the fact, aggravating to the professional investigator, that most of them are made from photographs of other facsimiles, so that they have the peculiar indefiniteness and lack of precision which always marks a photograph of a photograph, and which is peculiarly provoking to the student of bibliographical problems who is compelled to use them for the purposes of minute investigation. Mr. Thacher has not prepared and published these costly volumes, however, for those who, like himself, can only pursue their researches satisfactorily in treasure houses rich in old books and manuscripts. His purpose is to serve those less favored than himself who desire to gain definite ideas regarding the sources from which the facts of history are drawn. To these, his volumes offer a comprehensive stock of valuable material.

CHILDREN'S BOOKS.

Failure, ineptitude, vulgarity even, may regularly be looked for in productions for the delight of infants, along with successes more frequent and more marked than in books addressed to children in their teens. Betty Sage's 'Rhymes of Real Children' (Fox, Duffield & Co.), with the accompanying illustrations by Jessie Willcox Smith, is quite out of the common in external beauty—the pictures are truly admirable—and in the verses, which have a rare breeding and distinction, and are at the same time pervaded by a delightful humor. The thoroughly harmonious combination of pen and pencil is a lesson in taste to young and old. As *real* children display a spirit of mischief, some itemizing of pranks was called for by the title, and may perhaps return to plague the author of the suggestive inventory; and if this be thought a flaw, it is the only one we could point out. We will quote a stanza from "Nurse's Afternoon Out":

> "If you could see our Mother play
> On the floor,
> You'd never think she was as old
> As twenty-four.
> On Sunday, when she goes to church,
> It might be.
> But Tuesdays she is just the age
> Of Joe and me."

The little poem entitled "Mother" shows a capacity for flights beyond the nursery.

Another lesson in taste is the 'Mother Goose's Nursery Rhymes' of Dent-Dutton provenance, large open print on thick opaque paper, with colored plates and pen-drawings pretty nearly keeping step with the other appointments; the color designs being uniformly good and unhackneyed. From a Glasgow press proceeds a still larger and more showy volume (quarto), 'The Big Book of Nursery Rhymes,' edited by Walter Jerrold and illustrated by Charles Robinson (Dutton). Here we have one colored plate, the frontispiece; a rubricated title, well set off; admirable typography, and humorous and ornamental illustrations in the text. Messrs. Dent and Dutton again unite in charming reissues of Hawthorne's 'Wonder Book' and 'Tanglewood Tales,' with decorative head-pieces and colored plates.

About thirty fairy stories, ballads, and songs make up the contents of 'The Outlook Fairy Book,' edited by Laura Winnington (The Outlook Co.). They come from many countries, and a good proportion of them are the old stand-bys, of which one never tires; besides these, are some with better claim to novelty. The book is well printed on unglazed paper, and illustrated with a number of pleasing woodcuts by J. Conacher. "The Golden-Rod Fairy Book' (Dodd, Mead & Co.) justifies its name by an elaborate but unlovely yellow and green border to every page, golden-rod mingled with fairy conceits—dragons, witches, pixies, etc. New colored pictures adorn the old stories, and some not so well known which have been gleaned from recondite sources to add a flavor of originality to the collection. The editor is Esther Singleton; the illustrator, Charles Buckles Falls. Crimson is the color chosen to cover Mr. Lang's latest collection of fairy tales, published by Longmans, Green & Co. While the stories of the 'Crimson Fairy Book' fall no whit below those of its rainbow-tinted mates, perhaps the best bit of all between these covers is the preface, which the genial editor professes himself to be certain that neither children nor their mothers will read, but wherein he states—merely for the satisfaction of his own conscience—that he did not write all the stories in the book, nor any of them, and consequently does not deserve the wondering admiration of the ladies who compliment him upon his fertile fancy. It may be because he feels thus secure of not being read by the young people in question that Mr. Lang allows himself, after naming the many lands from which his tales have come, to make the sly suggestion that "No doubt many children will like to look out these places on the map, and study their mountains, rivers, soil, products, and fiscal policies, in the geography books." In 'Bilberry Wood' (Brentano's) very young readers will find some jog-trot verses about a small boy who went a-berrying, lavishly illustrated by gay-colored pictures, showing the seven bilberry boys and the five little maidens who inhabit the enchanted wood and help Jack to fill his baskets. The pictures are by Elsa Beskow; the verses by T. E. M. Dick.

'Six Fairy Plays for Children,' by Netta Syrett (John Lane), promise cheerful employment for young actors. The never-failing joy of "make-believe" will not be dimmed by too much hard study of lines. The plays are very short, and rely principally upon quaint costuming for their effect. The speaking parts are few, while an indefinite number of younger or less talented children can be worked in subordinately, as lords and ladies, etc. The children's party need no longer be a terror to the inexperienced entertainer, as a difficulty of thinking up amusements for young guests is taken quite off her hands by the authors of 'The Book of Children's Parties' (The Century Co.). Here are programmes especially suited to each month in the year, with games, favors, menu, etc., duly explained. The authors, Mary and Sara White, evidently have none of the old-fashioned prejudice against prizes and gifts for such occasions, for very many of the games are competitive, and a prize is suggested; while it is only the manner in which gifts are to be distributed that varies with the months. This, at least, is a more gracious plan than that of exacting forfeits from the unlucky. 'The Songs of the Trees,' pictures, rhymes, and tree biographies, by Mary Y. Robinson, music by Josephine Robinson (Indianapolis: Bobbs-Merrill Co.), assigns each month its emblematic tree—January, the holly; February, the "herald tree" for the opening year; March, the "wind tree," etc. All these must have their rhyme, their song, and their page or two of text. "Tree biographies" is, indeed, an over-ambitious name, for the scattering remarks about various trees, and the large pages, decorated with conventional trees and sprays in unmodified red, green and black and with fat children in black silhouette, the prosaic verses and humdrum little tunes, though they piece out something which bravely imitates a book, do not succeed in convincing the reader that it fills a long unnoticed want.

'The Bad Child's Book of Beasts,' by H. Belloc, the pictures by B. T. B. (Dutton), has a drollery of its own, but comes off second in comparison with our native 'Child's Natural History,' by Oliver Herford. We quote a sample stanza about the Frog:

> "No animal will more repay
> A treatment kind and fair;
> At least so lonely people say
> Who keep a Frog (and, by the way,
> They are extremely rare)."

Mrs. Peary and her snow-born daughter continue their literary collaboration in the 'Children of the Arctic' (Frederick A. Stokes Co.), a true and simple account of life in that region, beautifully illustrated with photographs from nature. The Bobbs-Merrill Co. publish Evaleen Stein's 'Troubadour Tales' in very pretty shape. The four tales are pretty, too, of minstrels, knights, and pages, and of a little Finnish maiden who rescued from oblivion a rune of the Kalevala. Each tale has a morsel of legend at the foundation, and each is illustrated. Virginia Keep, Maxfield Parrish, B. Rosenmayer, and Edward Edwards furnish the drawings, which are charming, enlivened for the young eye by spasmodic red, and red alone, even to the coloring of Count Reynaurd's "suit of plum-colored velvet." 'Fairy Legends of French Provinces' (Thomas Y. Crowell & Co.), illustrated by E. Boyd Smith, are taken from French sources; mainly from the folk-lore journal *Mélusine*, partly from Paul Sébillot's 'Contes des Provinces de la France.' Professor Jameson of Chicago University testifies to the fidelity of the translation, which has been made by Mrs. M. Cary. The interest attaching to the stories as studies in science makes a strong claim on the adult's attention, and children will like them as fairy-tales. Some of them are delightful; some out-Grimm Grimm in motiveless malice. A valuable feature is the reference of each tale to its source and to the time, place, and dialect of each. To read that a story was "told by the widow Madame Richet, aged seventy-seven years, at Woippy, near Metz," is to join in person the story-telling circle.

Swan Sonnenschein of London and Dutton of New York publish another important document in folk-lore. This is 'Cunnie Rabbit, Mr. Spider, and the Other Beef,' a volume of West African folk-tales by Florence M. Cronise and Henry W. Ward, with illustrations by Gerald Sichel. The authors have had special facilities for collecting their material, and have strung the stories on a thread of description of African native life. This book, while valuable to students, will have to be translated for children, as the dialect is almost a foreign language. That done, the children will find a modified pleasure in meeting old animal friends under more barbarous skies and blacker, cruder superstitions. For the investigator, the introduction, notes, comments, and the inevitable comparison with Uncle Remus's tales will prove of great interest. Brer Rabbit, with differences, figures here, as indeed he does in the French legends. The familiar three magic eggs appear in both volumes, and these are but two of many instances of community of myth in lands as far apart as Brittany and Sierra Leone.

From the land of fantasy and animal folk comes, through Doubleday, Page & Co., 'The Just So Song Book,' being the songs from Kipling's 'Just So Stories' set to music by Mr. Edward German, with the author's collaboration. A very happy yoke-fellowship it proves. Some of the songs, like "Rolling Down to Rio," "The Camel's Hump," "The First Friend," are well within the capacity of the youthful household choir. Others can be sung to them by their elders while they recover their breath. The accompaniments are for the elders—cleverly made and not too exacting. There should be many happy hours for all ages at the piano with this book and its well-mated words and music, rollicking, tender, dramatic. Oriental intervals are employed with happy and humorous effect. The cumulative ferocity of the sea in "Fifty North and Forty West" is almost as good as an attack of seasickness. The fine pounding to and fro of the melody in "The Riddle" over the sinking chromatics of the accompaniment is like an endless salt search over endless salt waters. This collaboration was a happy thought, happily executed.

Leaving the fields of fancy for realism and little girls, we come to 'My Wonderful Visit,' by Elizabeth Hill, gracefully illustrated by Beatrice Stevens and published by Scribners. This is one of the most unaffected children's books we have seen. The very natural little heroine of the wonderful week's visit to the country has her mind full of fairy stories, poetry, and romantic reading. She loves the woods, she says, "because they are so greenery and whithersoever." She lays the treasures of her fancy before her more prosaic and less cultivated playmates in a wholly child-like fashion, without a suspicion of posing. They, on their part, are natural little specimens of the workaday child brought up for use, not ornament, reaching out for amusement, however crude. The book comes near being a remarkably good one from its naturalness. The hindering feature is the sloppiness in language and episode.

In 'The Adventures of Dorothy,' by Jocelyn Lewis (The Outlook Co.), with pictures by Seymour M. Stone, we see another little girl on a visit, making acquaintance with all country joys. She has many adventures in meadow and stream, and in as far as she is a tomboy she is excellent company. As a premature belle enslaving boys and men and hoodwinking her aunt, she is not an endearing creation nor the most instructive companion for children, upon whom surely it is a pity to foist second-rate company.

For more than a quarter of a century, the Rev. A. J. Church has devoted himself to

supplying the English home with popular prose versions of Homer and Virgil. His amiable intention was to capture the schoolboy mind by the interest of the tale, to make the youthful and not so easily deluded reader see that the classic epics are stories of adventure, that the 'Iliad' is, after all, fiction as thrilling and almost as improbable as Henty or Mayne Reid. His books received a warm welcome from schoolmasters, and were promptly set as "holiday reading" to thousands of English schoolboys. They have been the *amari aliquid* of the school vacation to this day. Into this wide circle of reluctant readers Mr. Church now launches his 'Greek Story and Song' (Macmillan), a book designed to convince the sceptic of six to sixteen that Æschylus, Euripides, Bacchylides, Apollonius of Rhodes, and other novelists of whom he has never heard, need not bore him as poetry till he has got something out of them as fiction. The "Deeds and Death of Hercules" are extracted from three poets and served up as a short story with transitions by Mr. Church. Some of the more amusing scenes from Aristophanes are also paraphrased, but we fancy that to the youthful holiday mind these will sound like allegories, and will repel as an allegory should. In all this there is more "Story" than "Song," but at the end of the volume Mr. Church justifies his title by the addition of some thirty Greek epigrams rendered by himself into English verse. All of these are well done. Mr. Church is an excellent scholar, which implies, in England at any rate, the ability to translate. But few of the Greek epigrams were written for boys, and this volume is a convenient rather than suitable opportunity for reproducing, for instance, Plato's sentimental effusion:

"My star, star-gazing! would I were the skies
To answer look with look thro' myriad eyes."

The illustrations are reproductions of vase-paintings; the book is well printed and attractive.

Memoirs of M. de Blowitz. Doubleday, Page & Co. 1903. 321 pp.

Of these memoirs, the greater and the more interesting portion has been published serially in American magazines. The impression which the entire work makes is a mixed one, and not easy to analyze. It is, in large part, naïve self-glorification, by a man who was equally satisfied with his talents, which were indisputable; with his tact, which was the outcome rather of calculation than of instinct, but which was great in its kind; and with his principles, which were not too high to live up to. But while there is a good deal about M. de Blowitz, there is almost as much about the illustrious persons whom he interviewed. There are also a few chapters dealing with persons who were not illustrious, but who interested him. Three of these chapters (ix., x., and xi.) read like sketches for railway book-stall novels. The heroines are an illegitimate princess, a political agent, and a religious monomaniac. All three are beautiful as well as mysterious. The princess and the maniac are both aided—the latter, in the end, ineffectively—by the journalist's influence and chivalry; the political agent is foiled by M. de Blowitz's superior intelligence. Something of the melodramatic color which pervades these chapters is found also in those dealing with princes, ministers, and diplomatists, so that M. de Blowitz's relations to these personages are seen through a somewhat unreal atmosphere. In spite of this, we assume that his reported interviews are, in substance, as correct as they are interesting.

Their importance as history is another matter. According to the publishers, these memoirs "are full of the unpublished history of the Continent since the Franco-Prussian war"; but this claim is hardly borne out by the contents of the volume. There are entertaining sketches of public men, and some sidelights are thrown upon their characters. There are several picturesque anecdotes which are presented with much pomp and circumstance—as, for example, that the French Minister of Foreign Affairs was so enraged, when he heard of the English purchase of the Khedive's Suez Canal shares, that he broke his cue on the edge of the billiard table; but these are not important historic facts. We have been able to find in the book but two statements which the future historian is likely to regard as important, if true. One is that William I. had selected Caprivi as Bismarck's eventual successor. Count Münster, who is cited as the authority for this statement, publicly denied that M. de Blowitz's report of his remarks was correct; but the journalist asserts that the count privately conceded its truthfulness.

A second and more important statement, or series of statements, is that the apprehension of a Franco-German war in 1875 was well founded; that Von Moltke and the German military party had decided to attack and crush France before its military reorganization was completed; that the influence of this party with the German Emperor was so great that Bismarck was able to defeat the plan only by causing it to be revealed to the French ambassador at Berlin, M. Gontaut-Biron; and that the French Minister of Foreign Affairs, Duc Decazes, showed Gontaut-Biron's dispatch to M. de Blowitz in order to secure an exposure of the German conspiracy in the London *Times*. De Blowitz also reports a conversation with Gen. Lefló, who at the time was French ambassador at St. Petersburg, and who explained to De Blowitz how the information received through M. Gontaut-Biron was used to secure the diplomatic intervention of Russia. As against all this, we have Bismarck's reiterated statement that no plan for attacking France existed at Berlin, and that Gortchakoff's appearance as an "angel of peace" was an insulting piece of diplomatic claptrap. Bismarck, of course, could hardly take any other position if the facts were as De Blowitz states; but the conscientious historian will not undertake to say what the facts were until documentary evidence becomes attainable.

De Blowitz was unquestionably a great journalist, or at least a great interviewer and reporter. His qualifications were obviously inborn, for his first newspaper work was done at the age of forty-six. His practical suggestions to interviewers are interesting and often acute. The successful interviewer, he points out, will not take notes—a practice which keeps the person interviewed on his guard—but will trust to a trained memory. The interviewer who has elicited an indiscreet revelation must not depart abruptly, for if he does "a flash of caution will burst upon his informant," and the journalist will be notified not to report what has been said (p. 46). The person interviewed should know that his remarks are to be reported; but to this rule there are exceptions. If the journalist is sure that his informant will, on reflection, approve the publication of the interview, it is not always necessary that he should be forewarned. For illustration, read the story of De Blowitz's first report of an interview with Thiers (pp. 37, 38). When the person interviewed is forewarned, and yet makes indiscreet revelations, these may legitimately be printed; but it is sometimes wise to forego this immediate advantage in order to secure gratitude and confidence. For illustration, read the story about Decazes (pp. 307-309).

De Blowitz's professional ethics are interesting: they are so frankly utilitarian. It is more interesting, however, to find his religion tinged with the same professional utilitarianism. When, before the Congress of Berlin had assembled, a well-bred and well-educated young man in difficulties came to De Blowitz for counsel, and when it occurred to the journalist that this young man might, through indirect influence which De Blowitz commanded, obtain a position in one of the foreign legations at Berlin, in which position he would of course be bound primarily to consider, not the interests of the Government which he was nominally serving, but the interests of De Blowitz and the London *Times*—when this whole scheme, which was afterwards carried out, flashed upon the journalist, he saw in it a direct inspiration from "the Supreme Will which directs us." The very appearance of the young man at that juncture was an "intervention of the Supreme Power" (pp. 120, 121). This Supreme Power is singularly like those tribal or gentile deities which we are accustomed to regard as proper to primitive mythology, and whose reputed conduct constitutes, as Jhering has remarked, the palæontology of ethics.

John Greenleaf Whittier. By George Rice Carpenter. (American Men of Letters.) Boston: Houghton, Mifflin & Co. 1903.

The indebtedness for his material which Professor Carpenter acknowledges in his preface is mainly to printed sources. It could hardly be otherwise for one gleaning where Mr. Pickard had reaped the whole width of the field. But he has had access to some matter heretofore unpublished of real interest and importance, notably that furnished by Whittier's cousins, the Misses Johnson and Mrs. Woodman. It is, however, only in a slight degree that his book depends on these particulars for its significance. What gives it a high rank in the series to which it is the latest addition is the handling of the material heretofore in print, mainly in the Pickard biography and in the 'Story' of Garrison's life told by his sons. The political and reformatory aspects of Whittier's life are treated with more elaboration than the literary and poetic, but with less intimate appreciation, and here and there comparatively as if the author wrote with his left hand. Had the proportions been reversed, the book would have been even better than it is; but it must be acknowledged that the simplicity

of Whittier's verse is such that it does not invite extended comment.

The book falls into three nearly equal parts, "Boyhood" (in two chapters), "Journalist and Politician," and "Poet"; and two others, "The Young Abolitionist" and "Reformer and Man of Letters," each of these about half as long again (75 pages) as the three others individually. The chapters on Whittier's boyhood bring out better than any previous writing his relation to the soil, the circumstances and associations that went far to make him what he was. Comparative criticism is a favorite form with Professor Carpenter, and his use of it is generally instructive and satisfactory, but sometimes the note is just a little forced. Thus, it is true that "Bryant early withdrew himself from his simple native surroundings to the complex environment of a large mercantile city," but it is also true that nearly everything that is valuable and characteristic in his verse was written before he came to New York, and smacks of western Massachusetts as distinctly as Whittier's of the Essex farms. Professor Carpenter makes more than any one has made heretofore of Whittier's sensitiveness to particular poetic forms. All his biographers have remarked his early acquaintance with Burns, and how it set loose in him the springs of poetry, and how it was in the manner of Moore that he wrote "The Exile's Return," the mild effusion which excited the admiration of Garrison and the beginnings of a friendship that finally outwore the sharp vicissitudes by which it was beset; but Professor Carpenter is, we believe, the first to notice a long period of Byronic imitation and various other *rapprochements*, some of them very amusing, as where we have quite obviously the manner of Browning in "From Perugia" and in "Telling the Bees," but not perfectly sustained; and in "The Sisters" the manner of Rossetti. Inasmuch as Whittier had seen his own mother melting the wax image of a clergyman with fell intent, the wonder is that he did not try his hand at a variant of Rossetti's "Sister Helen." These echoes in a poet so indigenous as Whittier are proofs that he was favored by his isolation, and in a more literary environment would have been much less original.

Professor Carpenter has a kinder aspect for the body of Whittier's early poetry excluded from his collected works than some other critics, while yet of the scores of poems written before 1832 he finds "only three of any possible value," and two of these—"The Vaudois Teacher" and "The Star of Bethlehem"—might have been written by Mrs. Hemans, at one time his principal model. For "Mogg Megone" (1830-1836), against which Whittier eventually hardened his heart, Professor Carpenter has an extenuating plea, particularly interesting as calling our attention to a passage which anticipates the rapid and musical movement of "Snow-Bound" and other narrative poems of the poet's happiest hours.

The headings of the chapters "Journalist and Politician" and "The Young Abolitionist" suggest a sequence that was not realized in Whittier's experience. For a dozen years or more he was at once abolitionist and politician, and Professor Carpenter has not succeeded any better than those who have preceded him in the study of Whittier in adjusting the degrees and differences of this double manifestation. That he united the abolitionist spirit and purpose with the subterfuges and indirections of the machine politician, there is certainly no doubt; and as little that he did his best to work the political machinery for the advantage of the anti-slavery movement. Professor Carpenter does not disguise, nor does he accentuate, the less attractive of these features which are so frankly prominent in the Pickard biography. It would take the psychological acumen that marks "Bishop Blougram's Apology" or "Prince Hohenstiel-Schwangau" to discover the mutual relations of such opposing traits and their coördination in one and the same personality. Professor Carpenter does little more than give the facts for what they are worth. He treats the moral and practical difference between Garrison and Whittier in much the same manner. His praise of Garrison's lofty idealism sounds a refreshing note at a time when everything of that kind is depreciated as impracticable and not "up to date"; but then there is also liberal praise for Whittier's shrewd practicality. Certainly no one of Garrison's early followers took the line of political abolitionism and party politics more naturally than Whittier. He was foredoomed to that choice. He was not more the poet than he was the politician in the grain. Professor Carpenter seems to conceive of Whittier's political activity as having reached its term earlier than it actually did. He is strangely neglectful of the episode of 1844, when an election to Congress was within Whittier's reach and was rejected only on account of his miserable health. The genius and fame of Whittier had no better friend than the valetudinarian habit of his flesh. Had his constitution been robust, we should have had no "Snow-Bound," nor much, if any, of the poetical production of his Western slope. Political activity would have engrossed his energy.

Professor Carpenter does much more justice than former critics to Whittier's prose, especially his political editorials, some of which that have been long buried he has patiently exhumed. But he does less than justice to the anti-slavery poems, and, so it appears to us, to his poetic comment on the civil war. The former freed his spirit and gave him such command of his resources as he might never have had without that emancipation from the imitative triviality of his early verse. Moreover, the anti-slavery poems have more intrinsic poetical virtue than Professor Carpenter concedes to them. There is nothing of more questionable shape in his book than the assertion that "those who knew Whittier best in later life relate that he came eventually to feel that Webster was right and he wrong; that compromise meant weary years of waiting, but that the further and consistent pursuit of such a policy might have successfully avoided the evils of war and of reconstruction." We do not believe that Whittier ever arrived at this conclusion. If he did, the less Whittier he, and we appeal from his pitiful senility to the vigor of his earlier mind. We cannot do better than to take counsel with Whittier himself, speaking of "Ichabod" in his old age not in terms of retraction, but in terms of manly justification. "The Lost Occasion" (not "The Last Occasion," as Professor Carpenter has it) is not a retraction, but a softened form of the original condemnation.

Professor Carpenter's closing chapter, "Poet," is not so closely confined to Whittier's poetical determination as to deserve its title with so much preëminence. But it contains a good deal of excellent comment on different phases of Whittier's poetry, praising the lyrical part of "A Sea Dream," exactly as we would have it, as "his most musical and most lovely poem," finding his best analogue in Burns as "a poet of simple thought and feeling," concentrating in himself the typical New England life, maintaining towards a fading past a mood of wistful and reverential piety. The emphasis on Whittier's religious verse is slight and unsympathetic; but has even "Snow-Bound" endeared him to so many as "The Eternal Goodness" and "My Psalm"? His religious verse has, we are told, "many chances of survival." It has more because so many admirable hymns have been detached from his longer poems; Whittier's reputation as a hymnist resting entirely upon hymns made in this way, and in no single case on any hymn of his written as a hymn.

Stately Homes in America. From Colonial Times to the Present Day. By Harry W. Desmond and Herbert Croly. Profusely illustrated. D. Appleton & Co. 1903.

This very handsome volume of "small quarto" form consists of a series of more or less separate essays on the general subject of American houses of high relative rank, and of many full-page half-tone plates representing exteriors and interiors of such houses. Mr. Desmond has been the editor, since its foundation, of the *Architectural Record*; and Mr. Croly is associated with him. Most of the plates have appeared in the pages of the *Record*, and the text, which is wholly new, is fitted to those pictures in a general sense—the photographs illustrating it well if it is taken as a continuous treatise on one subject. There are eight chapters, of which the first is entitled "Men Who Build Fine Houses," so that the book begins with a sketch of the moneyed men of America as actual and as possible builders. The second chapter deals with those great houses as they were before the Revolution, or even before the war of 1812. Chapters iii. and iv. deal with the transitional dwelling—namely, those residences in city and in country which were built during the years between the establishment of American independence, socially speaking, and the beginning of more deliberate and self-conscious architectural work, a short time after the close of the civil war—a half century, 1815 to 1865. With chapter v. begins the analysis of the modern American residence, and to this subject, considered from different aspects, half the book is devoted.

The plates are about 165 in number, all good half-tone prints. They are illustrative, however, only if the reader is determined to use them in that way—that is to say, if he will, on finding mention of a great house of Mr. A. or Mrs. B., look it up in the List of Plates, find the pictures of that house, and turn to them as occasion serves. This it is necessary to urge, because the book is arranged as if the plates and the text were separate entities, no attempt being given to distribute the pictures even according to the chapters which might seem to call for them. This may have been caused by the unequal apportionment of

pictures, between the older and the more modern epoch; for there are only ten illustrations which concern themselves with buildings erected earlier than 1850, and only three (namely, those of the Stewart mansion once standing at the corner of Thirty-fourth Street and Fifth Avenue in New York) pertaining to the epoch between 1850 and 1880. All the remaining 150 pictures illustrate really the last four chapters. About half of these are views of interiors; and very dull they are, having generally only furniture in disorder as their principal subject.

Of the exteriors little need be said. There is the colossal residence of Mr. Widener, flat-roofed, with a lofty parapet, square-walled, with pilasters and a columned porch of entrance with pediment on the front, and a somewhat similar portico, but of rounded form, on the garden side—all very suggestive of the White House at Washington. There is the group of houses which together are called the Villard house, or the Villard-Reid house, in New York—a building surrounding three sides of an open court, the details of the windows studied from the famous Cancellaria at Rome. There are two of Richard Hunt's designs in late Gothic, namely, the Marquand house in New York, and the Vanderbilt house at Biltmore, in North Carolina. There are two or three of the important Newport "cottages"—Ochre Court, The Breakers, Belcourt, and the Marble House. In this way a great list of stately buildings is made up, for there are also such strange contrasts in design as the newly completed residence of Mr. Carnegie and the picturesque gabled building of Mr. Louis C. Tiffany, now drawing on to its twentieth year of existence. All this will be attractive just so far as American architecture generally is attractive. There is no better American architecture, existing in a considerable amount, than that which is seen in the exteriors of these recent houses. If they are not of absorbing interest—if no one leaves them with regret and longs to return to their consideration—it is because the names of Americans are not as yet written in the book of triumph and reward as masters of decorative design.

As for the text, it is difficult to say too much in the way of expressing sympathy for its serious, kindly, and intelligent discourse on this side of our American social life. There is no spread-eagleism about it. We are not treated as Senator Lodge treats us with regard to our Revolution, as if we were schoolboys unwilling to listen to anything except the bursting of fire-crackers on the Fourth of July. There is instead of all this a very careful consideration of the difficulties which drag us down, which keep us from great successes, which restrain the ambition, even the desire, of the artist to achieve something really artistic. The same employer, the same surroundings that do not discourage the mural painter, for instance, almost destroy the architect's ambition, because with the architect the practical difficulties—the questions of plumbing and lighting and heating and ventilating, the minor demands for precisely this and that disposition of rooms—are the matters which are forced upon his attention, and for which, as he understands, he is employed and is to be paid. So the artist who is designing the building is discouraged at the outset; whereas the artist who has only (say) to paint a ceiling, need but retire into himself to think out his scheme, make study after study, try effects on the spot, and finally paint a picture as good as his nature and his training have enabled him to achieve.

Hill Towns of Italy. By Egerton R. Williams, Jr. Boston: Houghton, Mifflin & Co.

The author of this little volume has traversed his territory with minute industry, and with an enthusiasm which compels admiration. He has grasped one fact too often overlooked by travellers: that all of Italy is not to be found in the half-dozen principal cities. So he betakes himself to the hills in search of that other Italy—the real Italy, one might almost call it; primitive, unspoiled, and aggressively picturesque. The Italian hill towns are not, as a rule, very accessible, and the sheer physical effort and endurance of discomfort involved in the journey described by Mr. Williams are considerable. Days vexatiously dragged out on crawling branch lines of railway, or in dusty *diligenze* where no railway has yet penetrated; inns where the foreigner is a curiosity and the accommodations are not greatly different from those of the Stone Age—all this undoubtedly does lessen the pleasure of travel. And it is to the author's credit that he seems oblivious of these discomforts in his frank, expansive enjoyment of what he sees. The book is a thoroughly well-meant effort to share this enjoyment with others.

Unfortunately, the point of view is merely that of the happy tourist, the writing is amateurish, and enthusiasm too often takes the place of accuracy or of sound appreciation. Throughout the book there runs a singular looseness of statement, of which one example may suffice. In his preface, Mr. Williams says: "On the lofty summits of those Apennines were perched the hundred cities of the Etruscans before Rome was founded." Then, in his first chapter, and on the second page, he speaks of "Etruria, whose *thousand* cities waxed rich and powerful before the days of Romulus." This is disconcerting. Mr. Williams is least happy in his repeated ventures in art criticism. His eye is caught by the obviously pretty things, while the greater and severer masters seldom interest him. Thus, in Arezzo, he patronizingly says of Piero della Francesca's great frescoes that they "portray a great many figures in dramatic action, which, for the period (1450), is remarkably well sustained. But the movement shows the same frenzy of energy and lack of grace that we find in most of Signorelli's work." In Borgo San Sepolcro he sees no more in Piero's sublimely impressive "Resurrection" than that "the attitudes were stiff, and the composition so poor that one of the myrmidons was actually reclining in the air." After this, it is no more than natural that he should come away considering Perugino's "Assumption" "the best thing in San Sepolcro." In the cathedral at Spoleto he delivers himself of this frantic criticism: "Fra Filippo's main strength lay in his mastery of colors. . . . It reminds one of Guido Reni, so many years after."

For the rest, Mr. Williams has faithfully read his Byron. His book is in no sense a serious work on the subject, but it serves to suggest how abundant is the material for such a work, and how great the opportunity for somebody to write a book on the hill towns of Italy.

The Oriental Rug. By W. D. Ellwanger. E. P. Dutton & Co. 1903.

At first glance it is a little difficult to imagine the reader for whom this volume is intended. It opens with casual disquisition on "The Mystery of the Rug"; treats symbolism in the standard designs cursorily—no one has done it satisfactorily; touches lightly upon the four main families—Persian, Caucasian, Turkish, and Turcoman—with a glance at mats, saddle-bags, and carpets; and ends with discussion of the New York rug auctions, and with practical admonition to collectors. Material information for the novice there is practically none. Indeed, if he would copy off Mr. Mumford's "Textile Table," and, for the rest, take every dealer's word, he would come off better than under Mr. Ellwanger's erratic guidance.

But as one reads on in these vivacious pages, it appears that neither the novice nor the connoisseur is really in mind. Mr. Ellwanger is frankly chatting on his hobby, and the book, with M. Anatole France's permission, might be called the adventures of a soul among rugs. Distinguished literary quality it has not, but it will prove companionable to all who are ever so little amenable to the fascination of these Eastern weavings. To such it will recall vividly the hopes, fears, and disappointments of a quest ever more arduous as aniline invades the purple East. The reward that awaits constancy and knowledge is suggested in twelve color plates, all but one of which are taken from choice examples in the possession of the author or of his brother. These reproductions, by the three-color process, are lovely to the eye; past experience raises the suspicion that the originals are not so red as they are here painted.

Since the monograph is openheartedly a record of personal preferences, a reviewer has only to assert his own predilections where they are not Mr. Ellwanger's also. *His* sober second thought is conventionally for the superb hard weaves of the Persian looms, but his heart is plainly with the Turkish fabrics—Ghiordes for choice—with a commendable leaning towards Anatolian mats; and 'tother fair charmer is the shaggy rugs of Caucasia, with their splendid barbaric designs. Beyond this there is a discerning word for Beloochs, probably the best rugs now readily attainable. All this shows that Mr. Ellwanger's enthusiasms are of the enlightened kind.

A drawback, almost inevitable from the nature of the book, is the fact that the author's textile horizon is contained within the New York rug market of to-day. Only so could he have said: "Cashmeres are rather matters of fact than of art." True, Cashmeres are now a mocking, but the old examples—not the merely washed and faded ones—display the bold Caucasian patterns with an amazing piquancy. Bokharas, too, would have received less perfunctory treatment than an unhappy parallel with the canvases of Vibert, had Mr. Ellwanger recently seen any fine prayer rug of this weaving. But these lapses, and more, may readily be overlooked for his hints of the wiles of rug doctors, his cordial com-

mendation of the small kilims, which are still in the market, and for the suggestion to seek in private sales the hundreds of rare Caucasians that, twenty years ago, were scattered abroad under the discredited generic name of Daghestan.

English Metrists. By T. S. Omond. Tunbridge Wells, England: R. Pelton.

This little book consists of two fragments. The author commenced a history of the various views held from Elizabethan times to the present day on the nature of English verse-structure. To clear the atmosphere, as it were, for the consideration of natural native English rhythms, he found it advisable to begin with a sketch of what has been done in the way of attempting, in English, imitations of classic Greek and Latin metres. Beyond this draught he was not able to pursue his treatise, and the unfinished sketch, a mere frustum, and that unpolished, is here printed. Slight as it is, it is an adequate and illuminating monograph, all kernel, without chaff or hull. It is impossible from anything else so far published to obtain so clear and so comprehensible information as to what the various writers of pseudo-quantitative verse in English meant to do, or were trying to do, or thought they had done; or of their views and their critics' views on quantity in English.

This is the first fragment. The other fragment, forming the second half of the book, is an incomplete trial-bibliography of writers on versification and writers of pseudo-classic verse in English. Unfinished and hasty as this bibliography is, it is the best thing of its kind so far published. True, it ignores all foreign publications (American productions are not accounted foreign), and so does not mention Schipper. Yet we note but eight omissions which we could supply, and of these only Erastus Everett's 'System of English Versification' (New York, 1847) is of any value in itself or for the history of the subject. Any one beginning the study of English verse will do well to read this bibliography. Its laconic, pithy comments tell just what to read and just what to ignore. And it is much to be hoped that no treatise on versification will hereafter reach the press until its author has assimilated everything to which this bibliography points the way. Such a guide would have prevented the publication of some ridiculous books which have appeared within the last ten years.

This tiny book has an excellent index.

A companion volume to "Sally Wister's Journal."

Hannah Logan's Courtship

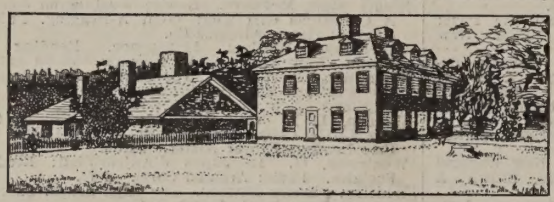
A TRUE NARRATIVE

The Wooing of the Daughter of James Logan, Colonial Governor of Pennsylvania, and Divers other Matters, as Related in the Diary of her Lover, John Smith, Esq., 1746-1752.

HANNAH LOGAN was the youngest daughter of James Logan, the secretary and friend of William Penn, and afterwards Governor of Pennsylvania. She was wooed by John Smith, a young merchant of Philadelphia, one of the scholarly Smiths of Burlington, N. J. There were more obstacles provided by fate to the union of the two lovers than are thought necessary by the modern novelist. In the first place, Hannah apparently was of a somewhat coquettish disposition, generally favoring his suit, but at times cold, distant and discouraging. Then James Logan himself was not sure that he desired John for a son-in-law, and was disposed to favor the suit of a rival "worth twenty thousand pounds." Lastly Isaac Norris, the younger, who had married Hannah's elder sister, had planned that his younger brother should marry Hannah, and his chagrin when his plans were finally defeated almost caused a family feud. During his struggle with all these adverse circumstances John Smith faithfully committed to paper his thoughts and feelings. We have also some side-lights in the form of letters and comments from other sources.

The diary contains much of interest besides this historic love affair. John Smith was a scholar and thinker, familiar with much of the best literature of the day. He knew almost everybody of consequence in the society of the Province, and also met and commented upon the notable strangers who came to Philadelphia. He was "weighty" in Friends' meeting, a successful merchant, versed in business affairs, at home in politics, a farmer in his leisure, and in general was in touch with every phase of colonial life.

Among the several hundred people mentioned in the diary are James Logan, Isaac Norris, Speaker; Gov. Jonathan Belcher, Benjamin Franklin, Gov. Lewis Morris, Gov. Andrew Hamilton, Gov. James Hamilton, Gov. George Thomas, John Kinsey, Tench Francis, Thos. Lawrence, Mayor; Wm. Plumstead, Chief Justice Wm. Allen, Timothy Matlack, Samuel Wetherell, Mayor Edward Shippen, Chief Justice Edward Shippen, Israel Pemberton, James Pemberton, John Pemberton, Col. Wm. Bradford, printer; Dr. Thomas Graeme, Dr. Phineas Bond, John Bartram, John Woolman, Anthony Benezitt, Benjamin Lay, George Whitefield, Gilbert Tennant. Families mentioned: Morris, Emlen, Armitt, Cadwalader, Noble, Mifflin, Bringhurst, Strettell, Pleasants, Galloway, Crosby, Trotter, Fishbourne, Bingham, Foulke, Griffitts, Waln, Wistar, Kirkbride, Biddle, Shipley, Willing, Wharton, Read, Callender, Lloyd, Moore, Fisher, Pennock, Dillwyn, James, Greenleaf, Chalkley, Owen, Carpenter.



STENTON, THE HOME OF JAMES LOGAN.

Edited from the original manuscript by ALBERT COOK MYERS, M.L., who has collected a great mass of material elucidating the text, and also many portraits, relics, documents, signatures and pictures relating to characters appearing in the diary. It is beautifully printed on deckel-edge paper, profusely illustrated, bound in cloth, antique style, with a cover design by André Koronski. *Circular on application.* $2.00 *postpaid.*

Some New Poetry

EL DORADO: A TRAGEDY

By RIDGELY TORRENCE

12mo. $1.25 *net.*

By the author of "The House of a Hundred Lights."

Edmund Clarence Stedman writes as follows of Mr. Torrence's new tragedy "El Dorado": "'El Dorado' certainly justifies the hopes raised by the quality of Mr. Torrence's first book, 'The House of a Hundred Lights.' The poet's hand and voice have strengthened. The imaginative cast of his grave yet picturesque drama is sustained throughout, but its highest reach is to be found in various superb passages of the blank verse—a measure which so few are born to master. In this respect, the 'Prologue' of itself stamps the author as a poet who will do honor to America."

SELECTED POEMS OF JOHN DAVIDSON

16mo, Cloth, $1.25 *net*; Leather, $1.50 *net.*

This volume contains the author's selection of his most important poems, including "A Ballad in Blank Verse," "The Ballad of the Nun," etc.

AFTER SUNSET: POEMS

By ROSAMOND MARRIOTT-WATSON

16mo. $1.25 *net.*

A new volume by the author of "A Summer Night" and "Vespertilia."

ZARATHUSHTRA, PHILO, AND ISRAEL:

A Treatise upon the Antiquity of the Avesta. Vol. I., ZARATHUSHTRA (ZOROASTER) AND THE GREEKS, pp. 208+xiii., by DR. LAWRENCE MILLS (Professor of Zend Philology in Oxford), now ready. To be had of F. A. BROCKHAUS, in Leipzig, at 7s. This volume is complete in itself, and is therefore issued pending the printing of the second part. While endeavouring to treat the subject of the Ameshaspends of the Zend Avesta in their relation to the Logos of the Greeks (exhaustively and as for the first time), the Author has also made his presentation as accessible in style as might be. It was written at the request of the Trustees of the Sir J. Jejeebhoy Translation Fund of Bombay, made some few years since.

Also a few copies of the FIVE ZARATHUSHTRIAN GĀTHAS, with the Zend, Pahlavi, Sanskrit, and Persian Texts, with Translations of the first three (Latin Verbatim and Free Metrical of the first), pp. 622+xxx., 1892-94, £2. See the *Bombay Iranian Catalogue*, January, 1901; the *Preussisches Jahrbuch*, 1897, p. 68; the *Zeitschrift of the German Oriental Society*, 1896 (Pischel); the *Revue Critique*, September: 1893 (Darmesteter); the *Göttingische Gelehrte Anzeigen*, May, 1893 (Justi), &c.

Also a NEW EDITION OF THE VERBATIMS in English, with the Free Metricals and Introductions to the Chapters, pp. 196+20, 1900, 7s. To be had of the OPEN COURT PUBL. CO. $2.00.

Also a DICTIONARY OF THE GATHIC LANGUAGE OF THE ZEND AVESTA (a to ch), being Vol. IIIa of the Gāthas, pp. 623-821+xvii., 1902, 12s. 6d.

The THIRTY-FIRST VOL. OF THE SACRED BOOKS OF THE EAST. The Yasna, Visparad, Afrinagān and Gāh's, translated. pp. 400+xviii., 1887 (same Author), is still to be had at 12s. 6d.

For further items see the *Nation* of March 13, 1902, p. xii.

By the Author of "Lavender and Old Lace."

NEW AND IMPORTANT SCRIBNER BOOKS

HOAR *TWO NOTABLE AUTOBIOGRAPHIES* GORDON

AUTOBIOGRAPHY of SEVENTY YEARS

By Senator GEORGE F. HOAR

In two volumes, with portrait. $7.50 net (postage additional)

"Indeed, so packed is it with memorable things that the reviewer, selecting here and there a chapter or a passage for special notice, feels like one gathering pebbles on the seashore." *The Dial.*

"Senator Hoar's sense of humor is keen and his book is illuminated constantly with flashes of fun that relieve its more solid qualities. It is a dignified, optimistic, entertaining and inspiring record of a long and useful life." *Chicago Record-Herald.*

REMINISCENCES of the CIVIL WAR

By General JOHN B. GORDON

In one volume, with three portraits. $3.00 net (postage 23 cents)

"His battle scenes are living pictures."—*Boston Daily Advertiser.*

"Valuable not only because the writer has had it in his power to furnish a great deal of first-hand testimony concerning important events and distinguished commanders, but because the trustworthiness of the narrative is guaranteed by the admirable spirit that pervades it."—*The N. Y. Sun.*

CENTRAL ASIA and TIBET

Toward the Holy City of Lassa

By SVEN HEDIN

With eight illustrations in color, 16 drawings by distinguished artists, 400 photographs and four maps. Two volumes, large 8vo, $10.50 net

"It is easily the most important of this season's books of exploration."—*Frederick Palmer.*

The first adequate description of Dr. Hedin's remarkable expedition and its accomplishments, an expedition so rich in adventure, as well as solid achievement, that he has been called, by the London press, "the modern knight-errant of science."

The STORY of a SOLDIER'S LIFE

By FIELD MARSHAL VISCOUNT WOLSELEY

Two volumes, with photogravure portraits and plans, $8.00 net

This soldier's life story, told by himself, is not only a work of much historic value, but a stirring tale as well, a piece of martial autobiography of very genuine interest.

The Ideal Christmas Gift

THE GIBSON BOOK FOR 1903

Eighty Drawings

INCLUDING

The Weaker Sex

BY

Charles Dana Gibson

$4.20 net (express collect).

Contains more *full page cartoons* than any of his previous books.

GEORGE FOX:

An Autobiography

Being the Story of his Life as told in Selected Passages from his Journal. Edited, with Notes and an Introduction, by Rufus M. Jones, M.A., Professor of Philosophy in Haverford College.

Two volumes, 12mo, cloth, gilt top, with maps of his journeys in England and America, and numerous illustrations. Postpaid, $4.00 *net*.

Students' Edition, in one volume, without the illustrations. Cloth, postpaid, $1.50 *net*.

Alike to the psychologist and the historian the career of George Fox is of great interest. Yet his own autobiographical narrative is made almost unreadable by being overloaded with theological discussion. In this edition the simple, thrilling story of Fox's life has been retained; the theological disquisitions have been dropped. The essential completeness of the story is in no way affected by this simplification.

As a naive story of personal experience it is of supreme value. Copious notes enlarge upon this phase of the work. The Introduction is a study of Fox's relation to the religious movements of the Commonwealth, of the root idea of which he was the exponent, and of the unique psychological characteristics of the man himself.

RECOGNITION

The Best Work on the Recognition of the Spanish-American Republics, is

The Independence of the South American Republics

A STUDY IN RECOGNITION AND FOREIGN POLICY

By Frederic L. Paxson, Assistant-Professor of History in the University of Colorado, and sometime Fellow in the University of Pennsylvania. 12mo, cloth, $2.00 *net*.

"If a revolution in the northern part of the republic of Colombia should result in the establishment of a Republic of Panama, at just what moment would precedent warrant the recognition of such a republic? The answer to this or a similar question may be deduced from the facts presented by Mr. Frederick L. Paxson in 'The Independence of the South American Republics.'"—*Chicago Tribune, September 4th*, 1903.

"This little book, which reviews comprehensively and brilliantly . . . the inception and culmination of the revolts of the Spanish colonies in the Southern continent, is especially timely to-day."
—*Boston Transcript*, September 2, 1903.

"Mr. Paxson has done one signal service in bringing out the fact that, even more completely than has been surmised, John Quincy Adams was the real head of the Monroe Administration, and was the real power behind the throne as regards the Monroe Doctrine. Furthermore, the author shows that the Monroe Doctrine itself was in process of formation for many years before it was enunciated in 1823. Finally, the present study throws new light upon the rivalry between John Quincy Adams and Henry Clay. Thus we have a work which will attract the immediate attention of every student of American history, and the attention will be well repaid." —*The Outlook*, August 29, 1903.

ALL FOR $10.00

An Album of Art for Your Library! Fifteen Beautiful Mounted Pictures for Your Walls! The International Studio for One Year

A splendid present either for yourself or friend. The offer is limited. Do not miss it.

The International Studio

1 | $3.50

A yearly subscription to the INTERNATIONAL STUDIO costs $3.50 and means that each month you will receive the most sumptuous Art Magazine ever published, surveying the whole field of Art, current and retrospective, both in articles by eminent authorities, and by a profusion of magnificent illustrations of every kind. There are seldom less than eight full-page plates in colour, mezzotint, or photogravure; and in all about one hundred text-cuts, including half-tones, line drawings, etc., in each number.

The Art Portfolio

2 | $5.00

There are many subscribers who wish to have a representative selection of the finest plates which have appeared in the INTERNATIONAL STUDIO during the last seven years, to frame or to put up in their rooms. To fill this need the Publisher has prepared a special edition of fifteen magnificent representative colour and photogravure plates, with a view to variety of subject and method of reproduction; each one mounted on a card mat ready either to hang up or to be framed. These fifteen beautiful mounted pictures, enclosed in a handsome portfolio, cost five dollars.

The Art Album

3 | $5.00

New subscribers may like to have a collection of plates, from the INTERNATIONAL STUDIO, covering the last seven years of current Art history, or old subscribers may be glad to review the period at a concise glance, so to speak. For this purpose the Publisher has collected 100 of the finest representative plates, bound in a handsome volume, which is issued at five dollars.

You can purchase the above separately or you can send in for the three items together at $10.00, to

JOHN LANE THE BODLEY HEAD 67 FIFTH AVE. **NEW YORK**

The Nation.

NEW YORK, THURSDAY, DECEMBER 10, 1903.

The Week.

Secretary Root's annual report differs markedly from his previous ones in that it contains no recommendation for the betterment of the army by legislation. Further advances in the modernization of the army he is plainly content to leave to his successor. This decision we regret, because another word from him as to the reforms he leaves incomplete would still have great weight with Congress. Much as Mr. Root has done to improve the conditions in the staff departments, the reorganization can never be regarded as complete until there is a consolidation of the Quartermaster's, Commissary, and Pay Departments into a body which shall also have some of the duties now given to the Ordnance Corps. Meanwhile, as Mr. Root has himself said, the staff of the army will be cumbersome, inefficient, over-officered, and hydra-headed. There should be but one responsible head when it comes to paying and buying supplies for the army, precisely as in the navy. Mr. Root, as usual, gives a good deal of space to the militia, but he has little of importance to say, save to report progress under the new militia law. For the grave defects in that measure, which to many observers seem without remedy, he barely refers. As to the general condition of the army, Mr. Root admits that it has not yet got over the reorganization of 1901, which he superintended. He quotes the Chief of Artillery as reporting that only 34 per cent. of the artillery officers have had five years' experience, and also says that "the burden of the older and experienced officers has been increased by the fact that so large a proportion of the junior officers brought in upon the enlargement of the army were necessarily without much military experience." He might have written a most entertaining chapter on the low morale of the service as indicated by the many courts-martial, and also offered to explain why reorganization had to include so many aged and "political" officers.

The striking feature of Secretary Shaw's report is its evidence of gross extravagance in the conduct of the Government. It shows that while the receipts increased about $10,000,000 over the previous year, expenditures increased about $47,000,000. But that is the smallest part of the showing. Despite the fact just cited, there was a surplus for the year of over $54,000,000, whereas for the next few years it is extremely likely that the balance will be on the wrong side of the ledger. To be sure, a surplus of $14,000,000 is figured for 1904; but we have to compare this with the estimate of nearly $52,000,000 for that period which Secretary Shaw presented a year ago. Certainly, if the receipts and expenditures maintain the same relation for the remainder of the present fiscal year that has been witnessed so far, the Secretary's $14,000,000 surplus will "flit like a ghost away." When he comes to his 1905 estimates, the Secretary frankly admits a deficit of $23,000,000. This is, of course, a purely arbitrary figure; the real shortage will as likely as not greatly exceed this sum. It may be tolerably easy to calculate expenditures two years ahead, but under our revenue laws the Secretary of the Treasury is all at sea when he comes to forecasting his receipts. He may believe that he can call spirits from the vasty deep, but will they come when he doth call for them? A year or two of even moderate industrial depression would be apt to knock Mr. Shaw's 1905 revenue calculations into a cocked hat; the same may be true even of his 1904 figures. With this contingency staring it in the face, the nation is confronted with an increase of $87,000,000 in its annual outgo between 1903 and 1905. And the astonishing thing is that the Administration has embarked on this extravagance with its eyes open. It estimates that it will collect about $31,000,000 more in 1905 than in 1904; and then, in cold blood, it arranges to increase its expenditures nearly $67,000,000, knowing that it will thus create a deficit of $23,000,000. Secretary Shaw's figures show that the navy and the postal service are to be the chief beneficiaries of this extravagance.

One sign that the Administration is worried over the way the country is receiving its headlong Panama policy is betrayed in the announcement that there was dread of "foreign interference." That was the reason we had to rush matters. If we had not promptly taken in the Panama foundling, it would have been laid upon some European doorstep. It appears that Admiral Evans was ordered several weeks ago to Honolulu with the Asiatic squadron, because "the Administration feared that some European Power might try to interfere in Isthmian affairs." The dear, delightful old story! It was about due. That wicked foreign nation is always lurking about, intent on doing illegal things if we do not anticipate it by doing them ourselves. This ancient herring is, in fact, forever drawn across the trail. When Senator Hoar told Mr. McKinley that he did not like the Hawaiian annexation scheme, that good President said plaintively, "I don't know what I am going to do. Japan has her eye on the Islands, and, of course——!" To all which then, and to the revival of similar nonsense about Panama now, the proper answer is "Fudge!" Interference of the kind was utterly improbable. We are certain that no power on earth could induce the Administration to name the meddling European country. It is always "some European nation." The appearance of that frayed bogey in the Panama affair is simply a signal of distress.

It is reported from Washington that District Judge Ray has refused to admit appeals of Chinamen detained under the Chinese Exclusion act, and has ruled that in all such cases the decisions of the immigration officials are final. The finding is commended in some quarters as depriving the wily immigrant of the delays and advantages of habeas-corpus proceedings. In most cases such actions are brought by Chinamen who claim American birth and citizenship. The decision may or may not be good law—it certainly is detestable morals. Chinese silks, teas, and pottery entering our ports have the right of appeal from the lower customs officials to the Treasury Department. Chinamen, on the contrary, though alleging American citizenship, must accept the judgment of the immigration commission as final. There is a certain absurdity in a law which gives merchandise greater judicial privileges than its producers enjoy. As to the matter of law, an act of May 5, 1892 (section 5), denies the right of bail to Chinese immigrants bringing habeas-corpus proceedings, and it is difficult to see how so clear an implication of the right of appeal can be lawfully overridden. To be sure, section 4 of the same act declares that all Chinese "shall be adjudged to be unlawfully within the United States unless [they] shall establish . . . . [their] lawful right to remain in the United States." But this clause is also repugnant to the common law, and the attempt to enforce it against a Chinaman actually a citizen of the United States and bent on maintaining his rights, would raise very interesting problems in Constitutional law. We trust that the alleged denial of the right of appeal to Chinese immigrants may be only a vagary of Judge Ray's, and will be overruled. Difficulties there are in enforcing the Chinese Exclusion act, because it is complicated in its machinery and fundamentally iniquitous in its intentions. To make its enforcement easier by a denial of fundamental human rights would be a perilous convenience for a republic.

It is easy to say, "We want no An-

archists in this country," but the real question is whether by employing arbitrary methods to keep out one from abroad we do not breed a hundred at home. Repression of free speech, unequal laws, tremendous and vague powers lodged in the hands of the authorities have been the recognized means of producing Anarchists in foreign countries, and undoubtedly will be here, if adopted. The great trouble with the law under which it has been attempted to exclude the Englishman Turner is that it does not precisely define his offence. Criminal laws can strike only at acts. A "disbelief" is something impalpable. How are you going to handcuff a mental state? How can Secretary Cortelyou prevent a thought from crossing the Atlantic? The moment we permit magistrates or commissioners to begin reading crimes in what a man thinks, as distinct from what he says or does, that moment we imperil a government of ordered liberty. Let the authorities be as severe as possible with every crime, or incitement thereto; but let them beware of taking their own guesses at "belief" as proof of crime. No man is safe if the police may arrest for secret thoughts.

The Cuba Quarry Company, according to a statement by Cyrus Field Judson in Thursday's morning papers, received no aid from General Wood, and was a losing venture. It is notorious that soon after General Wood left the island the company went into bankruptcy. The significant matter, however, was that, when General Wood became Governor of Cuba, two of his relatives went down there and began doing business with his Government. J. Condit Smith, a brother of Mrs. Wood, and Cyrus Field Judson, who married her sister, organized the Cuba Quarry Company, and Mr. Smith became president and Mr. Johnson treasurer. The report of W. N. McDonald, superintendent of the Department of Streets (Civil Report of Brig.-Gen. Leonard Wood, Vol. V., Part I., page 69), shows that after the company opened the Campo Florida quarry in the autumn of 1901, the Department "purchased the output" "at $3.63 per cubic metre." Mr. McDonald goes on to tell of the discovery of a new quarry nearer Havana and he explains:

> "Authority was also requested for permission to erect at this point the stone-crushing plant now in storage and formerly used at Vento, as it was believed that the city could furnish its own stone at a saving of more than $1 per cubic metre over contract stone of the same quality. This authority was not granted, however, and the purchase of stone from the Cuba Quarry Company continued up to May 19th."

On the next day, May 20, General Wood ceased to be Governor. In short, Gov. Wood apparently refused to save Havana $1 a cubic metre on its stone purchases by setting up a crusher that would interfere with the enterprise of his brothers-in-law. They were selling stone to the city at the highest price that was paid, for crushed stone brought from $1.25 a cubic metre, according to quality, and the average price was $2.

Gen. Wood may not have deliberately favored his relatives, but he was guilty of impropriety in letting them dabble with his contracts. It was for such misconduct that several employees of the Post-Office Department have recently been dismissed. Their sons, nephews, or other kin were in enterprises that trafficked with the Department. In some cases the connection led to actual dishonesty; but even when there was no crime, President Roosevelt was summary in his treatment of officials who had tolerated such looseness. None perceived more clearly than he that it was a ground for scandal and a grave menace to honest administration. The President would cut off his right hand before he would allow any member of the Roosevelt family, near or remote, to embark in Government contracting under his Administration. It is not asking too much that he demand from his subordinates the same scrupulous adherence to a sound principle.

The South should stop long enough in its rejoicing over the greatly increased wealth which the boom in cotton is bringing it to reflect that he laughs best who laughs last. The present profits are not all clear gain, for something must be deducted for the loss which has already been caused Southern cotton manufacturers by the high price of their raw material. But the most serious feature of the situation for the South is the enormous stimulus which the present movement imparts to the search for new fields for cotton culture. Consumers cannot afford to pay the present prices for cotton for any length of time; these figures mean almost, if not quite, prohibitive quotations on the finished product. Manufacturers will soon begin to find that they must go out of business if they cannot get their material at very much lower prices than the present. When the *St. James's Gazette* said, on Friday, "Does not this state of the cotton market prove that the heaviest sacrifices are worth making to encourage as quickly as possible the growth of the plant within our own Empire?" it simply voiced the sentiment of every rational mind. Experiments in cotton-growing have in the last two or three years been under way in Africa and Asia, and attention is also being turned to the West Indies. In assuming that cotton of an acceptable grade cannot be grown in quantities in any other locality, the South is more than likely hugging a delusion. At any rate, if there are no more good cotton lands, the present quotations on the staple will soon bring that fact to light This whole business bears the stamp of a penny-wise, pound-foolish policy. Not an exceptional demand at abnormal prices, but a steady demand at moderate quotations, is what the best interests of the South call for.

The admirable resolutions passed by the trustees of Trinity College in sustaining Professor Bassett confirm our view that they mark one of the most important events in the collegiate history of the South. The trustees recognized the great opportunity before them and rose to it. Their declaration that they are unwilling to lend themselves to any tendency to destroy or limit academic liberty, that they scout the notion that professors have not equal liberty of thought and speech with all other Americans, and their readiness that "Trinity should suffer rather than that it should enter upon a policy of coercion and intolerance," will make their utterance a veritable Magna Charta in the eyes of college teachers in the South. The trustees need have no fear that the college will suffer more than temporarily, if at all. Thousands know of it to-day who never heard of it before, more thousands are going to hear of it, and the thanks of teachers all over the United States will be given to its plucky trustees. Not the least gratifying is the support given to the trustees by faculty and students. Thanks to this incident, the latter will carry away with them on graduation clear ideas of freedom of speech and thought which should prevent them from ever becoming parties to any suppression of free discussion of the South's problems in the communities in which they may reside. They will not forget that any failure to uphold Professor Bassett would have meant, as the Trinity trustees well say, the misrepresentation of the State and the placing of the Southern people in a false light before the world.

The conviction of Parks's lieutenant, McCarthy; the resolve of the new Citizens' Industrial Association to prevent the use of the union label on objects made by its members; the finding of a verdict against a Chicago union for disobeying a court injunction, are so many signs that the rash and careless days of labor organization are drawing to a close. In every instance, it should be noted, the remedy for certain distinct evils in unionism has lain in the ordinary processes of the law. McCarthy is condemned under the regular laws forbidding extortion; the manufacturers of the Citizens' Industrial Association are merely asserting their right to label their products as they will; Franklin Union, No. 4, of Press-feeders, is fined for disobeying an injunction forbidding inter-

ference with the business of their employers. The cases are typical. Unionism, attempting to be a law to itself, needs no other restraint than the firm application of the equal laws of the land. The case of the Press-feeders' Union, held responsible for illegal picketing and fined as a corporation, is of peculiar interest, because it applies in America the principle of the famous Taff-Vale decision, and because it suggests that the anti-boycott suits now pending at Danbury, Conn., may have a similar outcome.

John Alexander Dowie appears to have come to the end of his rope as a prophet; and, like all prophets who can no longer distribute loaves and fishes, he is pretty sure to find his followers turning their backs on him. For it now appears that for bread his deluded saints have been getting a stone, and for fish a serpent. They have flocked into his two-year-old city to the extent of ten thousand. It is said the place represents an expenditure of $20,000,000; but if the lace and candy industries are a fair criterion of the manner in which this fund has been employed, there is likely to be considerable wailing and gnashing of teeth. The prophet could not fail to remember that godliness is profitable for this life, as well as that which is to come; the leasehold tenures of Zion show that. All property there is held on leases for 1,100 years each, but the lessees were no better than tenants at will. Meanwhile they have deposited their surplus cash in Zion Bank, and apparently put themselves completely in Dowie's power. Though he has succeeded in extricating himself from a receivership, further trouble can hardly fail to be in store for his one-man-power scheme.

There are some disadvantages in being a resident of Washington. For instance, if one wishes to buy the shares of the United States Realty Company of that city he must pay $110 a share, whereas a Philadelphian can have them for $100. Why this invidious distinction? Thereby hangs a tale. The United States Realty Company has recently been taking the people of Philadelphia into its confidence, and has outlined a scheme whereby one out of every 1,400 of them can make a thousand per cent. profit. The company "owns 5,000,000 feet of ground, largely on Pennsylvania Avenue," and it hastens to tell investors how they can "bring closer partnership between themselves and the United States Government." The partnership is to be of the usual kind—the Government is to put up the cash, and the investor is to take the profit. The investor is to come in on the basis of 10 cents a square foot for the land, the value of which the Government "will enhance by millions of dollars to be expended in public work at Washington." Is it necessary to say more to show why residents of Washington "need not apply"? But the company leaves no one to his imagination on this point. It tells the people of "the States" that it wants them to invest in its stock in preference to residents of the District, because the former have Congressmen to help them get improvements for the land, while the latter have not. And to make this clear, it prints a picture in the Philadelphia *Bulletin* of a Congressman flatly refusing a request of a citizen of the District of Columbia, while another Congressman is rushing pell-mell to fulfil a mission for a voter. Payment for the stock is on the instalment plan, and a sort of life-insurance benefit is thrown in, to say nothing of a free trip to Washington. The project suggests one or two serious matters. We have here another instance of the use of respectable names in hoodwinking the public. The secretary and treasurer of this precious scheme is William D. Hoover, a vice-president of the National Safe Deposit Company of Washington, an institution with $1,000,000 capital and nearly $5,000,000 of deposits. And among the directors is W. V. Cox, president of the Second National Bank of the same city, whose deposits amount to $1,250,000. But the striking feature of this latest land deal is the frank recognition by its promoters of the real function of Congress.

Mr. Chamberlain's decision to suspend his personal campaign for protection may be simply dictated by need of rest, or it may express the confidence that the stars in their courses are fighting for him. In any case, the imminence of an armed truce is a favorable opportunity for retrospect, and it must be admitted that Mr. Chamberlain's audacity has succeeded beyond all expectations. The attitude of the working class is still in doubt. Bye-elections and the condemnatory resolutions of various labor congresses have, on the whole, shown that Mr. Chamberlain's popularity by no means carries with it confidence in his programme. On the other hand, Mr. Chamberlain's appeal to the manufacturers has met with considerable success. It found them ready for any experiment. The idea of a virtual subsidy brightens as it is considered. Unquestionably a protective act would find just such a manufacturing lobby at Westminster as invades Washington when tariff changes are in the air. Again, Mr. Balfour's success in rendering the Free Food League innocuous, and in virtually silencing such formidable critics within the party as Lord Goschen and Sir Michael Hicks-Beach, has restored the "big brute majority" that Lord Salisbury bequeathed to his gifted nephew. Thus it is possible that the present Ministry may live out its natural term if it is willing to continue in the discredited position it has for two years occupied.

Striking features in the Emperor's speech at the opening of the Reichstag are the absence of a plea for army increase, and the recommendation that the most-favored-nation treatment be continued with England. Even more significant was the appearance of the Socialist members as a compact body, nominating a first vice-president and other officers. This marks definitely the conversion of the Social-Democrats from barren agitation to political opportunism. The change has been wrought with surprising ease and swiftness. Only the other day at Dresden the unyielding Bebel seemed to have carried the day for complete abstention from the routine of the Reichstag. But it is now apparent that the rank and file of the Socialists applauded Bebel's eloquence and sincerity, not his programme. For the creation of parliamentary socialism in Germany credit is due largely to such leaders as Singer and Bernstein—men who have pinned their faith rather to evolution than to revolution. From this time on, the Reichstag will afford an interesting parallel to the Parliaments at Paris and Rome, where strong Socialist groups hold almost a balance of power. Under such circumstances the most radical party will hardly decline, on doctrinaire grounds, to avail itself of the parliamentary advantages which lie so temptingly to hand.

Internationally, the Kaiser's desire to keep the industrial peace with England is of great importance, for it utterly annihilates Chamberlain's pet scare-crow, and leaves Mr. Balfour's retaliatory "pistol" without its most shining mark. It is the complete refutation of the charge that Germany would hold England responsible for the tariff war with Canada. But, with a noteworthy prevision, Mr. Chamberlain's friends had already supplied a new issue. Major Patrick Craigie —a stalwart fiscal reformer—has written to the *Telegraph* asking "Do we eat too much?" In the silly season the purport of such a question would be obvious. In the midst of a heated political campaign, the insinuation is, plainly, that the burden of food taxes may be greatly diminished by diminishing the consumption of food. All this is delicately left to inference, but the working classes are adequately warned of the dangers of surfeit, gout, dyspepsia, and similar gastric ills. An easy extension of the principle is that a happy and genuinely eupeptic race will prefer the dear loaf to the cheap, as less conducive to overloading the stomach. But we note that the implication is received in England with a hilarity recalling the famous hard-times counsel of that American magnate who recommended that the American poor should escape poverty at a bound by simply adopting the wholesome Chinese regimen of rice.

THE PRESIDENT'S MESSAGE.

Mr. Roosevelt's third annual message is, in some respects, an improvement upon the other two. It is shorter. It has nothing to say about "iron in the blood" of a "masterful race." It vaunteth not itself about law-made prosperity. On the contrary, it forecasts a Treasury deficit, and speaks of the need of economy. True, the President proceeds to recommend measures certain to lead to extravagance. His programme of navy enlargement has in it the promise of endless deficits. He is for economy in the abstract, but is also for every concrete expenditure. Lord Nelson said that the word "frigate" would be found written on his heart. On the President's is inscribed "fighting unit."

One part of his message seems to us ominous and discreditable. It is that relating to ship subsidies. He urges a commission to report to Congress upon this subject, on the ground that "differences of opinion" have hitherto prevented agreement on a bill. But, in fact, there are just two opinions—that of those who want the Treasury to come to the aid of the Shipping Trust, and that of those who do not. The President ought to be able to say which he favors. Apparently, however, he has found that inconvenient on the eve of election, the people having their prejudices. On the other hand, Senator Hanna has been insistent in demanding a word of encouragement for the subsidy-seekers; and so, we infer, the shift of a commission has been resorted to as a basis for campaign contributions from the parties in interest. It is a distinct subterfuge, unworthy of Mr. Roosevelt. A blunt and forthright man like him should have come out squarely for subsidies, or against. It is certain that, if the scheme goes through, the President will talk about economy and against corruption in vain. If he does not recall the scandals attending the Pacific Mail subsidy, the *Tribune* would doubtless place its files at his disposal.

In the forefront of his message, the President puts one more defence and explanation of his plan to regulate Trusts by means of the Bureau of Corporations. That therein he has a serviceable instrument may be admitted. As yet, however, he has no results to adduce, and can only make further promises. He declares that the "purpose" of the anti-Trust legislation "will undoubtedly be fulfilled," but for that the country must wait. Meanwhile, the President renews his futile attempt to discriminate, as a lawmaker, between "good" and "bad" Trusts. "We draw the line at conduct," he repeats; but presently betrays his confusion of thought by saying that it is a question of "conduct in accordance with the law of the land." In other words, it is a matter of law, not of morals.

All that the President says about the equal enforcement of the law is excellent. Similarly, there can be only praise for his attitude towards a bettered civil-service. His achievements in beating off attacks on this reform, since he became President, and in strengthening it at one point after another, are to his lasting credit. He has repaired a great deal of the insidious undermining of the civil-service law permitted by President McKinley. That Mr. Roosevelt is appalled by the amount of corruption disclosed in the public service is evident from his strong words on that subject. What he has done in the postal frauds is only an earnest, we believe, of what he stands ready to do with corruption in any Government department where it may be uncovered. Congress should not lose a day in seconding the Executive in the work of running official thieves to earth. National well-being, to say nothing of national honor, is more dependent upon clean administration than upon navies or canals.

What the President has to say about his Panama policy will, we should say, disappoint his supporters. This part of the message is long, labored, and inconclusive. To devote so much space to the Panama coup without having a single new fact or document to present, is a mistake in tactics. It looks like admitting that there is serious opposition, and that a defence is necessary. The more skilful strategy would have been to go on treating objectors with "disdain," and calling their arguments "contemptible," and quietly to inform Congress that the fruition of a proud and happy nation's hopes was at hand in the Isthmian Canal treaty. All this long argumentation and restatement looks like a case of *Qui s'excuse.*

Behind the President's cloud of words the essential facts remain visible as before. The wise precedents of international law have been violated; the prudent attitude and written commitments of former Presidents and Secretaries have been abandoned in a night; this country has been put in the humiliating position of doing to a weak nation what it would never think of attempting in the case of a Power strong enough to resent insulting aggression—and of doing it for selfish advantage. There are questions of right and wrong here which Congress will have gravely to consider, and the country to debate. Already it is evident that the President is not to have his way unchallenged. To say nothing now of any moral fault of his in this whole matter, he has made the old blunder of applying what has been called the "military mind" to a delicate question of diplomacy. That will never do, as Disraeli pointed out with incomparable force and authority. The rapid combinations, the velocity of decision which befit the battlefield are wholly out of place where the vast and slowly evolved interests of a democracy are concerned. Americans cannot be governed by sword and spur, as Napoleon said he governed France. To make fitful and precipitate action the rule of statecraft is to invite, as Disraeli maintained, not only condemnation, but "terrible discomfiture."

"CELERITY."

Apparently, President Roosevelt and Secretary Hay have been reading 'The Art of Political Lying.' One of its maxims is that public men are under no necessity of even appearing to believe in their own fictions. At any rate, the Administration seems to take a cynical delight in making its choice invention, "a republican form of government" in Panama, appear more hollow and ridiculous every day. The solemn signing of a treaty on Wednesday week by the three-man-power republic—a treaty drawn by a Frenchman and an American, in which Panama had absolutely no voice, and which was written solely in a foreign language understood with difficulty by at least some of the signers—puts the finishing touch of absurdity upon a business which has been, throughout, conducted with an unexampled disregard of the proprieties and decencies.

But we must thank the solemn Junta for one word. "Celerity is indispensable," they gravely resolved, as they signed the treaty without reading it. It is true. Jobs like that must be done quickly if at all. They cannot stand deliberation or discussion. Hence the orders issued from Washington to have the whole thing over with. No time was allowed for even a translation of the treaty into the language of the ratifying country. "There was only one copy, in the English language," says the official account. This might look like cruelty to the natives, but Secretary Hay knew what was good for them. They were simply required to "walk Spanish," not talk it. To have used their own language would, as the old English lady explained when refusing to speak French in Paris, "only have encouraged them." Besides, if the Junta had been permitted time to reflect, or to think that Spanish had anything to do with giving their country away, they could not have risen to their great dictum about "celerity." They would have recalled their own proverb, *El que va plano va lontano*, and that would have spoiled all. We presume they had received marked copies of the *Outlook*, elucidating its doctrine of the more haste the more states created and annexed. It is a pity, however, that some one had not sent them a copy of Secretary Hay's apothegm, written when he was still able to see the comic aspect of diplomacy:

> "There are three species of creatures who when they seem coming are going,
> When they seem going they come: Diplomats, women, and crabs."

The question is often put to us, "Well, what would you have done yourself?"

This implies, of course, that somehow or other the canal had to be got, the only doubt being by what particular piece of sharp practice. To observe good faith; to be dignified and conservative; to follow precedents; to respect the rights of the weak—there is no difficulty about that. But how, we are asked, could the other thing have been more happily done than by President Roosevelt's method? We reply, the same result could have been reached with some regard for appearances. The booty could have been bagged just the same, yet the burglar could have looked, to the casual eye, more like a church member. The Administration might have waited a decent interval. It need not have rushed into recognition of Panama, with so obvious a fear lest there would be nothing to recognize a day later. Doubtless the "republic" could have been propped up and kept going a few weeks. We could have loaned it Gen. Miles to strike terror to the hearts of its enemies. Then, after a month or so, recognition could have followed without such a violent suspicion of conspiracy attaching to the whole affair. Ratification of the treaty by Panama could also have been arranged without such a contempt of all regularity. There might have been at least a sham convention, a bogus Congress, a pretended President, and then it would have been possible to go through the farce with a graver face, and make it seem a real transaction between States instead of a wildly improbable "turn" on the vaudeville stage. In short, we can think of many precautions which it would have been easy for the Administration to observe, and which would not have interfered with its getting the plunder in the end, at the same time that they made its action more fair-seeming.

Indeed, "celerity" implies many dangers. One is, that statesmen in a hurry may forget their own record. As we have shown, President Roosevelt intervened last year to help Colombia restore order on the Isthmus. Too much celerity in doing the opposite thing does not look well. When such swift work is undertaken, statesmen may also ignore their country's history. Charles Francis Adams protested in 1861 against even the English concession of belligerent rights to the South—far from a recognition of nationality—on the ground that it had been "rapid." What would he have said of the overnight recognition of Panama as a full-fledged republic? Seward also had an obsolete notion of "celerity." In the circular letter to our Ministers in Europe, which he sent in April, 1861, he said that "to recognize the independence of a new State" was an act requiring the greatest deliberation. Especial "prudence," he argued, was necessary in regard to American States; and he added, in words that are the sufficient rebuke of the mad haste and unconcealed selfishness displayed in the Panama imbroglio: "When one nation casts its suffrages for the admission of a new member, . . . it ought to act under a profound sense of moral obligation, and be governed by considerations as pure, disinterested, and elevated as the general interest of society or the advancement of human nature."

THE COST OF FOOD.

The November issue of the *Bulletin* of the National Bureau of Labor gives a brief summary of an investigation into the cost of living of 2,567 workingmen's families. It covered the retail prices of the principal staple articles of food. The families lived in thirty-three States, embraced in five groups; 1,415 being in the North Atlantic group, 721 in the North Central, 219 in the South Atlantic, 122 in the South Central, and 90 in the Western. Thirty articles of food were tested according to the average consumption in families whose income is not more than $1,200 per year. The average income of the families in question was $827.19. Their average annual expenditure for all purposes was $768.54, of which $326.90 was for food. The average number of persons in each family was 5.31, and the average cost of food was $61.70 per capita, or about 17 cents per day for all ages.

Prices of separate articles of food are not given, but the relative retail price is furnished. Thus, if the average food cost for the thirteen years is represented by the number 100, that of the year 1890 would be 102.4, that of 1896 would be 95.5, and that of 1902 110.9. It appears that the price of food has followed an undulatory movement during the period under consideration, the two highest points having been 1893 and 1902, and the lowest 1896. This corresponds with the ups and downs of trade during the same period. The price of food, according to the statistics presented in the *Bulletin*, has varied with the wave line of prosperity. That wave line itself has been caused by the law of supply and demand.

There are variations in the amount of cereals produced in different years, but, in the conditions now prevailing in Europe and America, such variations do not greatly affect the retail markets. More serious effects are produced by variations of demand, for although the number of mouths to be filled does not diminish, the purchasing power of mankind varies greatly. While very few persons in civilized countries actually starve, many have less food than they need, and multitudes have less than they would buy if they could. There is little room for doubt that the relatively low prices of food prevailing in the six years 1894-1899, were due to the lessened demand consequent upon the trade depression of that period, and that the higher prices prevailing before and since were due to the contrary conditions. The retail prices of food have risen 16 per cent, since the low level of 1896, and are nearly 11 per cent. above the average of the thirteen years under investigation. The rise has been rapid in recent years, the cost in 1902 having been 5.4 per cent. above that of 1901 and 9.7 per cent. above that of 1900.

In the political campaign of 1896 there was a great outcry in the West and South against falling prices of agricultural products, and the downward movement was attributed by the Bryan party to a shortage of money. This it was proposed to cure by the free coinage of silver. The opponents of this policy affirmed that the decline of prices was due to other causes, and especially to improved processes of production and transportation. They contended also that falling prices were advantageous rather than hurtful to society, since they enabled the masses of mankind to supply their wants with less labor. The latter contention was indisputable, provided wages remained the same and the conditions of employment were unchanged. But if these conditions had remained unchanged, the prices of agricultural products would probably not have fallen, since the wage-earning classes would have been able to buy as freely as in the years preceding the panic.

How severely wage-earners are pinched by loss of employment or by a rise in the cost of living is seen in the fact that the smaller the income the larger is the proportion of it required to pay for food. In the cases cited, the expenditure for food was 42.54 per cent. of the total, but this was for families whose average income was above $800 per year. It has been shown by previous investigations of the Labor Bureau that where the income is $200, or less, the cost of food is 50 per cent., and that this percentage falls as the income rises. When the latter reaches $1,200, the percentage spent for food is less than 29. In Great Britain and Germany the percentage of food cost to total cost among the laboring classes is somewhat higher than in the United States, but for clothing, rent, and fuel it is lower.

One conclusion reached by the Labor Bureau seems to be inconsistent with the others. The price of food in the Western group of States in 1902 was lower by 7 per cent. than the average of the five groups, but in 1890, 1891, and 1892 it was about 5 per cent. higher than the average. Not only so, but the price in the Western group was 3 to 4 per cent. higher in the early nineties than it was in 1892. That food prices should be lower in the Western group than in other sections is not surprising, since the bulk of the cereals and meats consumed in the country are produced there; but how are we to account for the discrepancies in the Western group at different times? A fact of considerable

importance is that the extreme range of wholesale prices of food during the thirteen years has been more than twice as great as that of retail prices, being 37 per cent. in the former and only 16 per cent. in the latter. This indicates that custom has a strong influence in retail trade.

UNIONISM AND GRAND OPERA.

Director Conried's dispute with the orchestra of the Metropolitan Opera House displays one of those amusing cases in which unionism gravely occupies itself with the fine arts. The grievance of the orchestra was the employment of two women harpists, neither of whom possessed the card of the Musical Protective Association, and one of whom had not been in the country the six months required for union membership. The controversy, then, was that of the open shop transferred to the orchestra. Mr. Conried asserts the right to employ any musician he chooses, irrespective of society affiliations; the players of his orchestra, on the contrary, refused to play with any musician not a member of their union. The two harpists have consented to join the union for the sake of peace—

"Such sweet compulsion doth in music lie"—

and for the moment the incident is closed.

The affair presents some curious features. The players of the Metropolitan orchestra are somewhat above those who make up the rank and file of the Protective Association. Some of them would have certain pretensions to be regarded as artists, are occasionally soloists, teachers, etc. In any case, they belong or should belong to the wider fraternity of musicians. All the stranger that they are so willing to cast off this honorable bond and accept that of the manual trades. By a subterfuge—the requirement of six months' residence before membership—they seek to prevent the addition of foreign players to their number. In general, they seem to endeavor to shut themselves out from the musical world and to reduce orchestral playing in America to a limited handicraft.

Of course, the trouble is that these musicians have many of them been promoted from the journeyman position, and have not been able to realize their new dignity and independence. As purveyors of dance music and beguilers of the *entr'actes* of our theatres, they found their union of service, and now they continue to obey it against all common sense. For it is evident that the unionist principle of "ca' canny" would play havoc with the promotion they have so honorably won. Imagine that principle applied to the routine of an orchestra. First, it hinders its improvement by the injection of new blood. Not long ago the union attempted to have Eduard Strauss's orchestra excluded as "contract labor"—an instructive instance of the willingness of these unionized artists to belittle their own profession. The Treasury Department took the more generous view that these musicians were artists. Last winter an exciting foretaste of the possibilities of discontented unionism was afforded in the rumor that certain aggrieved tuba players would take their vengeance into their own hands. The prospects for our orchestras, if they are to be exposed to cacophonous strikes, are not inviting. Furthermore, a cardinal contention of unionism is that members must not be "rushed." Whether a strict application of this doctrine would not abolish the *presto*, we leave conductors and the unions to determine.

Evidently, logical unionism should not stop at the orchestra. Why should not singers, too, be the subject of strike, boycott, and blacklist? Consistency also would require that all the composers should join the Protective Association under penalty of having their works misplayed, and would dictate a refusal to play from scores not printed or engraved by the typographical union. Would convinced unionist violinists, again, consent to sit in chairs or use music-stands not stamped with the union label; or to "rosin-up" with gum drawn from syndicated evergreen forests? Who guarantees that horsehair and catgut have had purification under unionist rites? The very wood of the manly bassoon and brass of the inspiriting tuba are the result of subtle chemical unions unsanctioned by the American Federation of Labor. In short, the musician who desired to live by the complete unionist code could do little but whistle to himself in a vacuum.

Such delightful absurdities we condone when they are perpetrated by horny-handed labor, uninstructed and desperately solicitous of its imagined profit; but when men of the artist class make a deliberate policy of such antics, the occasion calls only for ridicule. A very effective comment on the boycott of Mr. Conried's two talented harpists would be that of an International Preachers' Union or a Protective Association of College Presidents. Pending the formation of these much-needed bodies, we can only hope that the Metropolitan orchestra will take counsel of good humor, good sense, and the honor that binds every artist to the furtherance of his chosen art. Director Conried has suggested that in case of a boycott he might present grand opera to a tolerant public with a piano accompaniment, that individualistic instrument having apparently evaded the clutch of advancing unionism. We believe the emergency was worthy of a higher flight. Mme. de Staël and her lover, August Schlegel, by a comprehensible coincidence, simultaneously declared architecture to be "frozen music." Had Mr. Conried in his extremity pointed to the rebuilt stage and auditorium which he has provided, and explained that these were the only music that unionism permitted him to offer, the announcement would have been greeted with greater applause than could ever attend the performance of a thoroughly unionized orchestra.

HERBERT SPENCER.

In the death of Mr. Herbert Spencer, England has to deplore the loss of one of the two or three most influential thinkers whom she has given to our generation. In awarding "points" to the various candidates for immortality in the "Pantheon of Philosophy," few are entitled to a higher mark than Mr. Spencer on the score of positive and systematic form. Whatever greatness this quality imports—and surely it is as rare and great as any—belong to Mr. Spencer in the fullest measure. Who, since he wrote, is not vividly able to conceive of the world as a thing evolved from a primitive fire mist, by progressive integrations and differentiations, and increases in heterogeneity and coherence of texture and organization? Who can fail to think of life, both bodily and mental, as a set of ever-changing ways of meeting the "environment"? Who has not suddenly at some time grown grave at the thought that the parents' sinful or virtuous habits are inherited by the children, and destined to accumulate from generation to generation while the race endures?

When one tries, however, to give a nearer account of Herbert Spencer's genius, and a more exact appraisal of his importance in the history of thought, one finds the task a hard one, so unique and idiosyncratic was the temperament of the man; and, with all the breadth of ground which his work covered, so narrow and angular was the outline which he personally showed. A pen like Carlyle's might convey a living impression of all the pluses and minuses which Mr. Spencer's character embodied, but a writer like the present critic must surely fail. Carlyle, himself, indeed, had he ever tried the task, would have failed. With his so different temperament, the littlenesses of the personage would have tempted his descriptive powers exclusively, and the elements of greatness would have got scant justice from his pen. As a rule, all people in whom a genius like Carlyle's raises a responsive thrill, find something strangely exasperating in the atmosphere of Spencer's mind: it seems to them so fatally lacking in geniality, humor, picturesqueness, and poetry, and so explicit, so mechanical, so flat in the panorama which it gives of life. Nevertheless, the fact remains that long before any of his contemporaries had seized its universal import, he grasped a great, light-giving truth—the truth of evolution; grasped it so that it became bone of his bone and flesh of his flesh, and, with a pertinacity of which the history of successful thought gives few examples, applied it to the whole of life, down to the minutest details of the most various sciences. And how, one may well ask, is profundity and the genuine "spirit of prophecy" ever to be shown in a man, if not by fruits like these?

Moreover, although Spencer's intellect is essentially of the deductive and à priori order, starting from universal abstract principles and thence proceeding down to facts,

what strikes one more than anything else in his writings is the enormous number of facts from every conceivable quarter which he brings to his support, and the unceasing study of minutest particulars which he is able to keep up. No "Baconian" philosopher, denying himself the use of à priori principles, has ever filled his pages with half as many facts as this strange species of apriorist can show. This unflagging and profuse command of facts is what gives such peculiar weightiness to Mr. Spencer's manner of presenting even the smallest topics. Some of his "Essays" have a really monumental character from this cause. "Manners and Fashion," "The Origin of Laughter," "Illogical Geology," and the reviews of Bain's 'Emotions and Will' and Owen's 'Archetype of the Vertebrate Skeleton,' immediately occur to the mind as examples. In all his writings on social morals, from 'Social Statics' to 'The Man versus the State,' the same quality is most impressively shown. Yet, with this matchless knowledge of certain sets of facts, one may hear it plausibly argued that Spencer is not a "widely informed" man in the vulgar acceptation of the term. He shows, that is, small signs of *desultory* curiosity. His command, *e. g.*, of foreign languages is small, and in the history of philosophy he is obviously unversed. His facts, in short, seem all collected for a purpose; those which help the purpose are never forgotten, those which are alien to it have never caught his eye.

Mr. Spencer's attitude towards religion, again, is slightly paradoxical. Few men have paid it more sincere explicit respect; and the part called "The Unknowable" of his 'First Principles' celebrates the ultimate mysteriousness of things, and the existence of a Supreme Reality behind the veil, in terms whose emphatic character it is hard elsewhere to match. Yet on the whole he passes, and we imagine passes rightly, for an irreligious philosopher. His metaphysical "Absolute" is too ineffable to become active in the system, and an absolute Physics forthwith takes its place. The mystery of things, instead of being "omnipresent," is all neatly swept together into this one chapter, and then dismissed with an affectionate good-by, while all the particular mysteries which later present themselves are quickly explained away; Life being but complicated mechanism, and Consciousness only physical force "transformed," etc., etc. In Mr. Spencer's heroic defence of individualism against socialism and the general encroachment of the State there is a similar seeming incoherence, so marked that one cannot help suspecting his thought to have started from two independent facts, and to be faithful to two ideals.

The first one was the old English ideal of individual liberty, culminating in the doctrine of *laissez faire*, for which the book 'Social Statics,' published in 1851, was so striking a plea. The second was the theory of universal evolution, which seems to have taken possession of Mr. Spencer in the decade which ensued. The Spencerian law of evolution is essentially statistical. Its "integrations," "differentiations," etc., are names for describing results manifested in collections of units, and the laws of the latter's individual action are, in the main and speaking broadly, hardly considered at all. The fate of the individual fact is swallowed up in that of the aggregate total. And this is the impression (unless our memory betrays us) which Mr. Spencer's dealings with the individual man in society always gives us, so long as the general description of the process of evolution is what he has in hand. He denies free will, as a matter of course; he despises hero-worship and the tendency to ascribe social changes to individual initiative rather than to "general conditions," and in every way tends to minimize the particular concrete man. Society drags the unit along in its fatal tow. Yet in the political writings of Mr. Spencer, with their intense and absolute reliance on individuals, we find the very opposite of this. Deeper students than we are may see the point in his system where these two streams of tendency unite. To us they seem, not perhaps incompatible, but at least detached.

To the present critic, the ethical and political part of Mr. Spencer's writings seems the most impressive and likely to endure. The 'Biology,' the 'Psychology,' the 'Sociology,' even were they abler than they are, must soon become obsolete books; but the antique spirit of English individualism is a factor in human life less changeable than the face of the sciences, and such expressions of it as Spencer has given will probably long deserve to be read. The 'Data of Ethics' is unquestionably the most valuable single part of the "Synthetic Philosophy," not for the reason that it makes ethics for the first time "scientific" (although this was probably its chief merit in its author's eyes), but because it gives voice with singular energy to one man's ideals concerning human life. Ideals as manly, as humane, as broadly inclusive, and as forcibly expressed are always a force in the world's destinies. The 'Data of Ethics' will therefore long continue to be read.

The 'Principles of Biology' and of 'Psychology' are already somewhat out of date. Spencer's heroic attempt mechanically to explain the genesis of living forms are altogether too coarsely carried out in the former book; and the problems of reproduction and heredity are complicated today with elements of which he could know nothing when he wrote. Of the 'Psychology,' it may be further said that not much remains that is of value beyond the general conception, supported by many applications, that the mind grew up in relation to its environment, and that the two cannot be studied apart—a conception that sounded decidedly more original in the '50s and '60s than it does now. The 'Sociology' has probably a longer lease of life. It is more recent, and must long be valued as a vast collection of well-arranged anthropological facts. As a chapter in the "System of Philosophy," its value is almost evanescent, for the author's habit of periodically pointing out how well the phenomena illustrate his law of evolution seems quite perfunctory and formal when applied to social facts, so strained and unnatural is it to conceive of these as mechanical changes in which matter is integrated and motion dispersed. It is probable—strange irony of fate!—that the book called 'First Principles,' although from a strict point of view it is far more vulnerable than anything its author ever wrote, is the work by which the "Synthetic Philosophy" will remain best known to the reading world.

This, however, is very likely as it should be. A man like Spencer can afford to be judged, not by his infallibility in details, but by the bravery of his attempt. He sought to see truth as a whole. He brought us back to the old ideal of philosophy, which since Locke's time had well nigh taken flight; the ideal, namely, of a "completely unified knowledge," into which the physical and mental worlds should enter on equal terms. This was the original Greek ideal of philosophy, to which men surely must return. Spencer has been likened to Aristotle. But he presents far more analogies to Descartes, whose mechanical theory of evolution swept over his age as Spencer's sweeps over ours. And although Spencer can show no such triumphs of detail as Descartes's discoveries of analytical geometry, of dioptrics, of reflex action, and of perception by the eye, his moral character inspires an infinitely greater sympathy than that of the earlier philosopher. Descartes's life was absolutely egotistic, and he was basely servile to the powers that be. Mr. Spencer's faculties were all devoted to the service of mankind, and few men can have lived whose personal conduct unremittingly trod so close upon the heels of their ideal.

ANOTHER GLACIAL WONDER.

TUSCUMBIA, Mo., November 28, 1903.

So many remarkable phenomena in the northern part of the United States have been explained by the glacial period that it seemed as if we were nearly at the end of the wonderful story, but at the meeting of the Geological Society of North America in Washington last winter, Professor Buckley of the School of Mines at Rolla, Missouri, and Dr. Ball, who had been conducting the geological survey of Miller County, made an announcement really startling to that portion of the scientific public whose familiarity with the situation enabled them to appreciate its significance. The announcement made was that a number of granitic boulders had been found in the valley of the Osage River near Tuscumbia, 40 miles further south than they had been heretofore noted in that vicinity. The facts seemed of sufficient importance to warrant a journey of 700 miles for their investigation. Investigation has increased rather than diminished the interest attaching to them.

The glacial boundary across Missouri follows very closely the line of the Missouri River, there being no indications of glacial ice actually across the Missouri River, except on the low lands in two or three counties between Jefferson City and Kansas City. North of this line, the country is completely enveloped with glacial deposits, including great numbers of granitic bowlders from the vicinity of Lake Superior and the northern part of Wisconsin and Minnesota. The course of the Missouri River itself is also worthy of attention. At Kansas City this great line of drainage makes a turn at right angles and pursues an easterly course for 300 miles. The obvious cause of this turn is that it meets here the first beginnings of that gentle uplift which is known as the Ozark Mountains. But the word mountains is hardly applicable, since there is merely a swell in the earth's surface attaining an elevation of about 1,500 feet above the sea, or

1,000 feet above the Missouri River at a point 100 miles south of it. From this watershed the drainage of several large rivers, of which the Osage is the principal, finds its way northward into the Missouri. The Osage River, however, rises two or three hundred miles to the west, far up in Kansas, running for a considerable distance parallel with the Kansas River above Kansas City, and not far from it. Tuscumbia lies in the trough of the Osage, 60 miles above its entrance into the Missouri.

A drive of forty miles across the country from California, about thirty miles west of Jefferson City, to Tuscumbia, shows a complete absence of glacial deposits, and leads over a picturesque country which was once a plain, but is now deeply channelled by numerous streams which have been at work from early geological ages. On approaching within a few miles of Tuscumbia, a scene of real grandeur unfolds itself before one's eyes. The Osage River has cut a central channel in the magnesian limestone about 300 feet below the general level, and in this channel are innumerable side gorges which approach it on both sides at various angles. The other side of the valley, 10 or 15 miles away, has the appearance of a mountain range. On descending into this valley one finds the immediate trough of the Osage at Tuscumbia to be about half a mile wide, with perpendicular limestone bluffs on either side of 100 to 150 feet in height. Between the river and these limestone bluffs there are continuous old flood-plains or terraces, now considerably above high-water mark, furnishing very fertile farm lands. But the river itself is not flowing over a rock bottom. The abutments of the railroad bridge fourteen miles below were sunk forty feet below the bottom of the river before rock was reached. The gradient of the river is only about one foot to the mile—very nearly the same as that of the Missouri. Steamers ascend in high water as far as Osceola, a distance, as the river runs, of 200 miles.

All this shows clearly enough the following vicissitudes in the river's history: During a very long period the drainage of this flank of the Osage uplift has been concentrated along the line of the Osage River, when the general elevation was somewhat greater than now. This period was protracted enough for the river to erode all this long, tortuous, deep gorge, contributing the material to the Missouri, which carried it away to the sea. This process proceeded until the gorge was certainly 40 feet deeper than now. Then a subsidence of the region diminished the gradient of the stream and allowed it to silt up its channel to the present level, whereupon followed the remarkable facts connected with the glacial period of which we are now to speak.

At as many as nine places within a few miles of Tuscumbia, large granitic boulders from the far north have been found along the gravel terraces which line the Osage River. One, which I saw, measures 4x3 feet upon the surface, and extends an indefinite distance into the ground. Another, lying in one of the side gorges half a mile back from the river, would weigh fully half a ton, and was stranded at an elevation of about 75 feet above the river, which would be 150 feet above the Missouri. To account for the existence of these boulders in the gorge of this valley, but one theory is really open: they have been floated 60 miles *up the Osage River* on ice floes which had brought them down from the glacial region farther north.

To produce such a drift up stream, it is necessary to imagine conditions under which the Missouri River would periodically rise nearly 200 feet, while the Osage River had not much increase of its water supply in the principal part of its drainage basin. Such a condition of things has many analogies in a small way. For instance, the Columbia River in Oregon often rises 30 or 40 feet when there is no corresponding rise in the Willamette. At such times the water of the Columbia sends a wave up the Willamette to Portland somewhat as the tide of the ocean goes up into an inlet. I well remember hearing a strange story, when a boy, that the mill-dam of Hubbardton Creek in Vermont had been carried away up stream. The explanation was that the Castleton River, into which the creek ran, suddenly rose while there was no corresponding rise in the creek. The mill-dam, not being protected from pressure below, was consequently easily drifted up stream. Under similar conditions the Missouri River, rising 200 feet, would float masses of ice up the Osage River to a distance of nearly 100 miles.

On turning our minds to the conditions connected with the close of the glacial period, we find that they fit in with these facts as a key fits the lock for which it is made. During the glacial period the drainage of all the region from the Hudson Bay southward was turned over into the valleys of the Mississippi and Missouri. Some 200,000 square miles of the drainage basin then contributing to the Missouri was covered with glacial ice. In the closing stages of the period it is estimated (and with much probability) that the ice was melting off at the rate of from 15 to 20 feet annually, which, in addition to the annual rainfall (probably much increased), would make about ten times the amount of water now carried off by the Missouri River. During this last year the excessive rainfall of a single week through eastern Kansas and southern Iowa produced tremendous floods at Kansas City, raising the water thirty-eight feet. It is easy to suppose that during the summer months in the closing stage of the glacial period there was an annual rise in the river of five times that amount, which would be sufficient to produce the phenomena we are considering at Tuscumbia.

This explanation required for the boulders at Tuscumbia is also of much assistance in our efforts to explain the vast amount of loess which has accumulated in the Missouri valley. The deposits of this very fine loam, like that which covers southern Russia and borders the base of the mountains throughout Central Asia and China, rise in many places to a thickness of 200 feet above the river on either side, thinning out in both directions as one gets away from the stream. A controversy of considerable interest has arisen concerning the origin of this. The difficulty of providing water in sufficient quantities to account for the deposit has given great encouragement to those who would attribute it entirely to wind deposition, so that, notwithstanding the difficulties, many eminent geologists have adopted the wind hypothesis. But in the annual floods of such enormous extent in the Missouri valley, which theoretically would occur during the closing stages of the glacial period, and which are now more definitely indicated by this drifting of large boulders so far up this southern tributary, we have the requisite *vera causa* which has been needed by those advocating the water hypothesis.

Special interest attaches to these phenomena from the supposed connection of the loess with the early history of mankind. The celebrated Lansing skeleton, concerning which so much has been written, is thought by many of the best geologists to have been buried at the base of the bluffs twenty miles above Kansas City before the deposition of the loess, thus connecting it with that stage of the glacial period which produced the enormous floods of which we have been speaking. Without attempting to assign any definite date to this period, it is sufficient to have our attention directed to those significant vicissitudes through which the human race has passed, in both Europe and America, which are connected with the glacial period. Either man is very ancient, or the vicissitudes connected with the glacial period are much more recent than were once supposed. Indeed, so many signs point to their recency that we need not be surprised to find the date of the civilization of Babylonia carried backwards till it meets the period of the prevalence of glacial ice over northern Europe and North America, with its outlying population existing in much the same conditions as those now surrounding the Eskimo in Greenland.

G. Frederick Wright.

PRESIDENT HÉNAULT.

Paris, November 19, 1903.

We can count several judges among our men of letters; the most famous, we may say illustrious, is President Montesquieu, author of the 'Lettres Persanes,' the 'Esprit des Lois,' the 'Considérations sur la Grandeur et la Décadence des Romains.' His place is quite apart. After him I will name President des Brosses, whose 'Journey to Italy' remains among the most amusing and witty books of the eighteenth century. President Hénault was even more famous in his time than President des Brosses. His connection with Madame du Deffand has made his name familiar to all those who take an interest in the society of the eighteenth century; his books, some of which were much read in his time, are now well forgotten, and it was not without some surprise that I found them much eulogized in a very careful and elaborate biography, 'President Hénault—1685-1770: His Life and Works, with inedited documents,' written quite recently by M. Henri Lion, a doctor of letters. Sainte-Beuve had already done something for the memory of President Hénault, in giving him a place in his 'Causeries du Lundi,' which are decidedly the most valuable and comprehensive contribution of our time to the study of French literature. Sainte-Beuve wrote his article after the publication of the memoirs of President Hénault by one of his grand-nephews, Baron de Vigan, as late as 1854.

"President Hénault," says Sainte-Beuve, "was above all a society man. Happy from his youth, having received from Heaven fortune, good looks, the desire to please and the art of enjoying, he early lived in the best society; he breathed, at the end of the

reign of Louis XIV., the civilized air, the mildest and the most temperate, for which he was made. He continued his career far into the eighteenth century without partaking of its license or its ardor; he was the intimate and familiar friend of all the men in power, the patron or the Amphitryon of men of letters, among whom he took a distinguished rank which all were anxious to give him. He had no other misfortune than to survive himself a little in his last years, and to sink in spirit before being extinguished."

It may almost be said that M. Henri Lion's volume is the development of these lines of Sainte-Beuve's; at any rate, the impression made by the volume is the same as that made by them.

Hénault was born on the 8th of February, 1685. After leaving college, he entered the Seminary of the Oratorians, but he had not the clerical vocation, and left it soon afterwards. He became very early a Councillor and afterwards President of one of the chambers of the Parlement. He led a very gay life, and became one of the intimate friends of Samuel Bernard, the great financier of the time, of the Sullys, the Prince de Léon, Madame de Lambert, the Regent of Orleans, the Abbé de Chaulieu. On the occasion of a *lit de justice* which Louis XV. had to hold on reaching his majority, President Hénault was asked to prepare the speeches to be delivered before the Parlement by the young King, by the Regent, by M. d'Armenonville, the Keeper of the Seals, and by *M. le Premier*, the first President. These four speeches did not give him much trouble. He tells us in his memoirs that the Regent never knew to whom he was under obligations for his speech.

Hénault on this occasion became acquainted with the Cardinal Dubois, with the Duke de Bourbon and his mistress, Madame de Prie. In the midst of the dissolute society in which he was living, he had a serious attachment: he felt for Madame de Castelmoron, wife of the Marquis of this name, a lieutenant-general of the French armies, a strong and lasting friendship. He speaks of her in his memoirs as a person "worthy of the esteem and attachment of all who place any value on virtue," and he says, after her death (1761), that "she had been, for forty years, the principal object of his life." Madame de Castelmoron certainly was his good genius, the person whom he revered, to whom he came for advice in all the circumstances of his life. He describes her as reasonable, full of judgment, of a solid mind, unselfish, without envy, without pretension, living only for others. Judging from his own words and assurances, she was the one woman for whom he really had an affection, consisting half of love, half of friendship, or of a kind for which no suitable word has yet been found.

The relations of President Hénault with the famous Madame du Deffand grew very intimate towards 1730, when she was already thirty-four years old. They lasted for forty years, and became quasi-conjugal. The marchioness was separated from her husband, of whom she said once that he was always "aux petits soins pour déplaire." She had been for a short time the mistress of the Regent, and was a friend of Madame de Prie. When we read her letters (which were published first at Strawberry Hill) we do not wonder that she was a friend of Voltaire and the witty Duchess du Maine. She became a star of the little court which the Duchess kept at Sceaux. Hénault resigned his charge at the Parlement in 1731, and spent a good part of his life at Sceaux, where the marchioness remained for whole months.

In 1744 Hénault published the work which established his reputation, the 'Nouvel Abrégé Chronologique.' Its success was very great, several editions following each other rapidly, and the work had the honor of translations. "Nobody," said the Prince de Beauvau, who succeeded Hénault in the French Academy, "knew better how to separate pedantry from research. He presented to us a picture of our history as he saw it, as a statesman, a jurist, a man of the court, a savant. He painted the different ages of our nation, the characters of our illustrious men, the variations of the Government." Hénault's work on French history is, I am afraid, not as much read nowadays as Bossuet's 'Discours sur l'histoire universelle,' or as the historical works of Voltaire; but even these have now few readers. History transforms itself, like everything else. The famous 'Esprit des Lois' of Montesquieu sleeps on the shelves of many libraries, and few are they who are familiar with this great work. Hénault had the satisfaction of an immediate success. M. Henri Lion takes the trouble to explain that this success was well deserved, and he attributes to Hénault the qualities of the genuine historian. We have a tendency nowadays to believe that the nineteenth century created the true historical method, and are apt to forget that the study of original documents had already become the basis of history in the eighteenth century; we forget the immense work of the Benedictines, their valuable publications of texts, of local and provincial histories, the publications of the Academy of Inscriptions. Hénault was intimately acquainted with the work of Boulainvilliers, of Daniel, of Mézeray, of Vertot, of Calmet, and a number of others. He was not a pedant, but he was really learned; he was very conscientious, as is proved by the changes and additions which he made in the successive editions of his work.

Hénault liked to relieve the seriousness of his work by little anecdotes; and who can blame him for it? On the morning of the battle of the Downs—which was fought by Don Juan of Austria against Turenne, contrary to the advice of the Prince de Condé, who was at the time on the Spanish side—Condé said to the Duke of Gloucester, who was on his side: "Sir, have you ever seen a battle lost? Well, you are going to see one." And, truly enough, Don Juan lost his battle. This anecdote is perfectly authentic, and it has a real historical value, as it shows the acumen of the great Condé, who never lost a battle when he was himself in command. In many of the anecdotes of the 'Abrégé Chronologique' we see the moralist, the philisopher, as well as the historian; and this explains the great success which the work obtained at the time. The portraits are also very striking, though they do not recall the vividness of the portraits of Saint-Simon. Among the best are those of Louis XI., of Mazarin, of the Cardinal de Retz. I find in the last this curious passage: "One has some difficulty in understanding how a man who spent his life in combining, never had any true object. He loved intrigue for its own sake." M. Lion concludes by saying that the 'Abrégé Chronologique' was the best epitome of French history of the eighteenth century; and in the nineteenth he finds nothing to compare with it except Michelet's 'Précis de l'histoire moderne.'

The memoirs of President Hénault appeared, as I have said, not till eighty-eight years after his death, in 1854. As edited by the Baron de Vigan, they constituted a volume of more than four hundred pages. The first part contained the memoirs proper; the second part consisted of various fragments, dispatches, literary essays, etc. As soon as these memoirs appeared, Sainte-Beuve found out that there was another manuscript of them in the possession of M. de Monmerqué; it is now in the library of La Ferté-Macé, to whom it was left by M. de Contades. The memoirs, which were written, Hénault says himself, for the amusement of his old age, are very fragmentary; there is no chronological order in them. The narrative becomes, in consequence, somewhat confused. They can take only a secondary rank among the numerous memoirs of the time; their real interest lies in the portraits drawn here and there of the many men and women with whom Hénault came in contact. These memoirs, however, which Hénault wrote *currente calamo*, without taking much pains, will in future have probably more readers than the 'Abrégé Chronologique,' a work which absorbed him during his whole lifetime.

There is nothing to say about the relations of Hénault and Madame du Deffand that has not been said many times. The story goes that when the President was near his end and had already partly lost his mind, Madame du Deffand, who was in his room with some friends, asked him, in order to take him out of his drowse, if he still remembered Madame de Castelmoron. This name woke him up, and he said that he remembered her very well. She then asked him if he had loved her more than Madame du Deffand. "Quelle différence!" said the dying man—"quelle différence!" There was much eloquence in those last words; the heart was still alive, though the mind was nearly gone.

Correspondence.

A TOPIC FOR TOWN MEETINGS.

To the Editor of The Nation:

Sir: Your comments upon President Roosevelt's aggression upon the rights of Colombia and upon the good name of our own country give me satisfaction, but you should, I think, suggest action that will place the American people right before the world. The President attempts to filch territory and privileges from another nation, and in offensive and autocratic manner he attempts to drive Congress to forestall the will of the people. The patriotic, honest, and sober citizens should in town meetings demand that their Senators and Representatives in Congress, without further delay, vote for a joint resolution of Congress that would, in the most emphatic way, censure President Roosevelt and Secretary Hay for their hasty and improper action. The people must in this way repudiate base actions and declare that the Unit-

ed States still stands for justice, liberty, and equality of opportunity, if they wish to hold the confidence and respect of the Central and South American countries.

There is no question that all citizens of the United States want an Atlantic-Pacific canal. The majority of these citizens accept the Panama route as the best; but they want it built in a way to respect and conserve the rights of Colombia, want it built so that Central and South American countries need not be driven into political and commercial alliances with Great Britain and Germany, to the great disadvantage of all American nations. The people of the United States want no antagonism between the Americas, north and south, and they want trade relations on natural lines fostered in all possible ways, want free trade among American nations established, and a common tariff against all European and Asiatic nations—of course, with a fair distribution of customs receipts among all countries within the American Commercial Union—within the American Zollverein.

I would have the Atlantic-Pacific Canal forever free to ships sailing under the flags of those nations in the proposed union. I would in this way stimulate American shipping. This economic union would make immediate and permanent trade expansion on natural lines, because countries of different products, of different climate, must exchange natural products or do without them. When the people of the United States appreciate, as soon they must, that the policy of President Roosevelt on the Panama situation means discord, war, and industrial stagnation, not peace and prosperity on the American continent; when they appreciate that establishment of this Roosevelt-Hay policy of aggression upon weak American countries means putting aside the Monroe Doctrine, they will dislodge from power the President and the Congress that would betray them, and put our great and free country forward once more as the protector of American nations against European attack.

Yours very truly, WHARTON BARKER.

PHILADELPHIA, December 4, 1903.

LIKELY TO BE FORGOTTEN.

TO THE EDITOR OF THE NATION:

SIR: Will Congress at its present session forget that Treasury episode which caused so much comment last summer and which cries aloud for relief? Probably it will, but the country can hardly have altogether forgotten it so soon. The occasion in mind is that when one of the Assistant Secretaries, having been left in sole charge for several weeks, was compelled to spend his whole time, both in and out of office hours, in writing his name at the bottom of official papers which had been written by subordinates, and which he had not time to read, much less to consider. Who, then, was "running" or administering the Department? Certainly not the man who was putting in fourteen hours a day in writing his signature as fast as a messenger could put the unsigned papers before him and take the signed ones away. Were not the true administrators the authors of the official letters, warrants, and what not that were signed by the Assistant Secretary in such hot haste? And who were these authors? Ostensibly the chiefs of bureaus and divisions whose initials were appended for authentication, but really, in probably a majority of cases, the chief clerks who served under these chiefs. The chief clerk is the real administrator in most Government offices, and apparently he must remain so in the Treasury till Congress relieves the Secretary and Assistant Secretaries from some of their manual labor and so gives them more time for administrative duties.

This sort of unnecessary tax upon the head of the Treasury is not now first complained of. It is an ancient abuse. As long ago as January, 1832, Peter G. Washington complained of it in a paper "On Simplifying the System of Public Accounts," which in January, 1837, was published as House Document No. 71, 24th Congress, 2d session. Why the publication of this paper was delayed for five years is a question on which the public records throw no light. It is a searching criticism of Treasury methods, and might be read with profit by those in authority even at this day. Mr. Washington's comment on the particular point under consideration is this:

"The appropriation to the Secretary of the Treasury of the whole duty of drawing warrants for the payment of all the moneys of the Government was unquestionably a defect in the system [Hamilton's], however small its inconvenience in the early periods of the Government. As it regarded the labor involved, it imposed upon an officer, otherwise sufficiently tasked in matters of the highest interest, duties of an inferior grade, not required by the true object and character of his office."

Though the biographers have neglected Peter G. Washington, the public records show that he was a man well qualified by experience if not otherwise to discuss Treasury methods as they then were. The publication of the first "Blue Book" (1816) found him in that curious and long since forgotten office called in the Blue Book "Accountant's and Additional Accountant's Office," in which Tobias Lear was Accountant and Peter Hagner was Additional Accountant; the powers and duties of the two being identical and coextensive, and they between them auditing all the accounts of the Government. How such a dual authority worked is not related, but probably not well, for the next year (1817) the office was abolished and four auditors created, Peter Hagner becoming Third Auditor and taking with him as clerk Peter Washington. In 1823 Washington was transferred to the Secretary's office. In 1829 he became chief clerk in the Treasurer's office, where he remained till 1836, when, on the establishment of the Sixth Auditor's office (Auditor for the Post-Office Department), he became chief clerk therein, and in 1845 became Sixth Auditor. Surely he had opportunity, if ever man had, to learn what the Treasury needed.

Since Peter G. Washington wrote his treatise on the Treasury methods, the Secretary has been measurably relieved of drudgery by the creation of three assistant secretaries to divide his labors. But while the labor has thus been divided by four, has it not increased a hundredfold or more? Really it must seem that the system now needs mitigation more than ever, and that that need is increasing with accelerating intensity each passing year. This writer has no expert knowledge that would warrant him in attempting to suggest a remedy, but it does not need expert knowledge to draw the conclusion that men who are competent to write official letters and draw warrants that are to be signed and dispatched without reading by the signer, are competent to sign such communications, which even now they are required to authenticate by signing their initials. F. A. CRANDALL.

WASHINGTON, December 7, 1903.

EGYPT EXPLORATION FUND.

TO THE EDITOR OF THE NATION:

SIR: As chairman of the United States Committee of the Egypt Exploration Fund, I wish to call attention to the special importance of the work to be undertaken in Egypt during the present season. The Egyptian Government has granted permission to Prof. W. M. Flinders Petrie to work for the Fund in the pyramid field of Sakkara, near the step-pyramid, a privilege heretofore reserved to the Cairo Museum. In this comparatively unexplored ground must lie valuable material for restoring the history of the Third Dynasty, and thus connecting the recent discoveries of Petrie at Abydos with the era of the pyramids of Gizeh. The Memoir of the Fund to be published in 1904 will contain the results of this winter's work.

The large collection of papyri which the Græco-Roman Branch of the Fund is now publishing is of special interest to classical scholars and theologians. Each of its four volumes already published contains most instructive and entertaining documents from the Græco-Roman period. A fifth volume is expected in a few days, which contains, among other things, parts of two odes of Pindar, a part of the Kolax of Menander, fragments of the lost Greek original of the Apocalypse of Baruch and of the missing Greek conclusion of the Shepherd of Hermas. Among the papyri now awaiting publication at Oxford is a collection of Sayings of Jesus, similar in style to the well-known Logia; and a part of an epitome of the lost books of Livy, of the third century A. D., differing largely from the epitome now extant. On the back of the latter papyrus is written a part of the Epistle to the Hebrews. In the great mass of these papyri which are still undeciphered or are still buried at Oxyrhynchus there is the delightful possibility of finding even the most precious of the lost classics. The recent discovery of Bacchylides, Herondas, and Aristotle's Constitution of Athens shows that nothing is too improbable to be reasonably anticipated. A large number of the original papyri are now on their way to this country, and others will soon follow; and these will be distributed to various libraries and museums through which substantial contributions to this branch of the Fund may come.

The Fund is entirely dependent on subscriptions for the means of exploring the mounds which contain the papyri. Oxyrhynchus will still supply material for two years' work, and it is important that this should be finished without delay. Sir John Evans, the President of the Fund, has just issued an appeal for increased support to this undertaking, urging the necessity for immediate action, that an opportunity may not be lost "which, considering the rapidly increasing difficulty of finding fresh sites of real promise, is not likely to recur."

WILLIAM W. GOODWIN.

CAMBRIDGE, Mass., December 7, 1903.

Notes.

A new 'History of North America'—"the first definitive, authoritative, and inclusive narrative history" of the continent, to use the publishers' announcement—is to appear in twenty volumes under the editorship of Guy Carleton Lee, Ph.D., and bearing the imprint of George Barrie & Sons, Philadelphia. We do not gather from the prospectus just what is meant by "definitive" when speaking of this (or any) history, or by "inclusive." It is also to be "non-sectional," in token of which there will be *two* accounts of the civil war, a Northern and a Southern, each as definitive, presumably, as the work taken as a whole, besides chapters on "The Rise of the New South" and "The Development of the North"; "non-partisan" also, and "non-sectarian," but the same duality or multiplicity of treatment does not prevail here. There will be many colaborers, together with an Editorial Board, a Board of Advisers on Exclusion and Inclusion—this for an "inclusive" history—a Board of Advisers on Colonial Affairs, and a Board of Military and Naval Advisers. The work will be sold only in sets.

David William Harmon's 'Journal of Voyages and Travels in the Interior of North America,' dating from the beginning of the last century, will shortly be reprinted by A. S. Barnes & Co.

Forthcoming publications of Macmillan Company are the collected poems (old and new) of Prof. George E. Woodberry; 'The Expansion of Russia, 1815-1900,' by Francis Henry Skrine; and the 'Vicar of Wakefield,' for the sake of facsimile illustrations from the original water-color designs by John Massey Wright, a follower and pupil of Thomas Stothard.

A revised edition of Prof. William Hand Browne's 'Maryland' in the American Commonwealths Series, including the civil-war period, is in the press of Houghton, Mifflin & Co., who will also publish in the spring the 'Oligarchy of Venice,' by George B. McClellan.

Lila G. A. Woodfall and Margaret E. Sangster collaborate in 'Presiding Ladies of the White House,' an illustrated series of biographical sketches, emanating from the Bureau of National Literature and Art, Washington.

George W. Jacobs & Co., Philadelphia, announce "The American Crisis Biographies," edited by Ellis P. Oberholtzer, Ph.D., author of a recent Life of Robert Morris.

Fritz Reuter's 'Geschichte Mecklenburgs von Erschaffung der Welt bis auf unsere Zeit' is at last to see the light of day. This, the only historical work of the great Low-German poet and novelist, is after the style of Washington Irving's 'History of New York,' and was entrusted by the author shortly before his death in 1874 to his friend, Karl Krüger, in Mecklenburg, who declared it the best work ever done by Reuter, but advised against publication at the time. Now, it seems, the ban has been removed, and an interesting specimen of original historical writing may be expected. Welbrandt, Reuter's biographer, states that the work was begun as early as 1850.

In the rearrangement made recently in the City Library of Frankfort, a literary find of the first quality resulted, namely, of an edition of the 'Mundus Novus' of Amerigo Vespucci, in which he reports his voyage to Brazil in 1501-1502. Only one copy of this letter is known to exist; discovered in Havana in 1844, it was bought by the British Museum. The Frankfort copy was originally published by Hermann Borckhausen in Rostock. The Strassburg house of Hertz has undertaken the publication of a fine facsimile edition. The document covers four folio sheets, and originally came from the library of Johann Maximilian zum Jungen of Frankfort, who in 1690 presented it to the City Library.

A little more than twenty-two years have elapsed since we reviewed at considerable length the late E. A. Freeman's 'Historical Geography of Europe,' just passing to a second edition. We now receive from the publishers, Longmans, Green & Co., a third edition, under the competent supervision of Prof. J. B. Bury, who has not only judged that this very original and instructive work should be kept alive, but should be periodically brought up to date. Without this freshening it could never become antiquated, as Mr. Bury points out; with it, it may attract a new generation of readers—not mere consulters. The revision, by an unusual but pardonable course, has been intertextual rather than by supplementary appendix. Mr. Bury refrains from modifying Freeman's use of "Aryan" with a racial implication where language is the only ground for such classification; but he utters a warning note. We could have forgiven him had he generally changed Freeman's "Slavonic" to "Slavic." The maps of the accompanying atlas have undergone no change.

Another work owing its vitality to its intrinsic excellence, but also to its extensive use as a text-book for examinations, is the late Sir W. W. Hunter's 'Brief History of the Indian Peoples,' of which the twenty-third edition (eighty-ninth thousand) has just been brought out by the Oxford Clarendon Press (New York: H. Frowde). Like Freeman's History, it, too, has been revised for what time has rendered incorrect, and has been brought up to date.

The 'Essays of Leigh Hunt,' edited by Arthur Symons, and the 'Essays of Douglas Jerrold,' edited by Walter Jerrold, and both illustrated by H. M. Brock, are highly to be praised for the get-up as in keeping with this sort of literature. These are handy volumes, in clear if small type, and very tastefully adorned by the designer.

The humorists must have their new editions along with other classics, and we have on our table Mark Twain's 'Jumping Frog,' illustrated by F. Strothman (Harpers), and 'Phœnixiana,' with illustrations by E. W. Kemble (Appletons). The first and smaller reprint contains, besides the original masterpiece, its rendering into French in the *Revue des Deux Mondes* thirty-one years ago, and the author's retranslation, together with the "private history" of the story, with a reference to a Greek origin. The reissue of the sketches and burlesques of John Phœnix (Lieut. George H. Derby) is a matter of 232 pages. Mr. J. K. Bangs contributes a brief introduction of a biographical nature, and might have told more without being fatiguing. It would also have been well to rearrange the contents (as by bringing the lectures on astronomy together), and to expunge some of the coarser jests. Phœnix is seen at his best in the "New System of English Grammar." It gives one a start to encounter here one of Uncle Remus's stories, "Who Cooks for You-all?"

The purely journalistic production entitled 'The Leopard's Spots: A Romance of the White Man's Burden,' by Thomas Dixon, Jr. (Doubleday, Page & Co.), was written, we are assured, "with the utmost restraint," or attempt thereat. A similar restraint might well have been applied to its being reclothed with a sumptuousness of apparel—even portrait illustrations—more properly reserved for approved literary excellence. However, in any form, it will save a trip to the South for those who wish to study the Southern white attitude towards either the North or the freedmen.

Mr. Henry W. Boynton's 'Bret Harte,' in the Contemporary Men of Letters Series (McClure, Phillips & Co.), is a brief, clear, and readable sketch. His purpose being to consider "soberly what sort of man Bret Harte really was, and what, being that sort of man, he really did," more space is given to inference of character from conduct and from the whole of his author's work than to examination of stories that everybody knows and that need no examination to explain their fame. Mr. Boynton's inferences are reasonable and just, and his feeling about Harte's whole contribution to letters is indicated on his first page thus epigrammatically: "He had one brilliant vision, and spent the rest of his life reminding himself of it." This little book is very well worth reading, especially by those who want a fair view of Harte that shall not make them dislike him.

Lest anybody should be misled by the apparent promise of the title, 'The Book of Italian Travel,' by H. Neville Maugham (Dutton), we will say that the work is an egregiously bad piece of bookmaking. To trace historically the effect of Italian travel on northern Europe, and to compile an anthology of the best things that travellers have said of Italy, would be a pretty task for a skilled hand. Mr. Maugham is unequal to the enterprise. Errors of fact are common in his historical narrative; the chaplet of quotations thrown about Italy, town by town, gives Dickens quite as prominent a position as Ampère. There is no indication of the editions from which extracts are taken, no general bibliography, and no index beyond a perfunctory list of places. Perugia the author knows, but not Prato or Pistoia. For the style, let the following suffice: "The primal Ruskinian offence is the prejudicial selection of special eras or pictures out of the past. We cannot make any truce with this preciosity of finding special meanings or beauties in isolated examples." For an anthologist the sentiment is a delightful one.

A. J. H. Greenidge and A. M. Clay have collected and arranged for the Clarendon Press (New York: H. Frowde) a small volume of 'Sources for Roman History for the years 133-70 B.C.,' a period for which there is no single ancient authority of importance to serve as a guide. The effort has been merely to collect the fragmentary evidence still accessible, not to comment upon it or to reconcile its contradictions. The citations are arranged by years, not by subjects or authors, but indices of subjects and authors relieve somewhat the inconvenience of the chronological order. The collection is far from complete, but many

references are given to passages not transcribed, and the volume is certainly adapted to be of great service to the average teacher of Roman history in the schools. Cicero occupies several times as much space as any other one authority, while the epitomes of Livy, Sallust, Appian, and Plutarch each furnish considerable material. More than fifty authors are cited.

The "Special Winter Number" of the *Studio* (John Lane) is devoted to an exposition of 'The Genius of J. M. W. Turner' by several writers, and to a large number of interesting reproductions of that artist's works in several mediums. The essays are of very different kinds; M. de la Sizeranne's on "The Oil-Paintings of Turner" being an eloquent rhapsody, more able to show us how he feels about Turner than what Turner was, while the two by Walter Shaw Sparrow on "Turner's Monochromes and Early Water-Colors" and "The Later Water-Colors," and that by C. F. Bell on "Turner and his Engravers," are sober studies of the artist's work as it actually exists. Mr. Sparrow protests that Ruskin's "poetical transports" have greatly hindered the understanding of Turner by producing a "literary atmosphere that settled itself between his pictures and those who wished to study them." It is a pity that his own colleague, on the present occasion, should have wished still further to thicken the mist. The plates, whether in color or in black and white, are well executed, and are so selected as to give an idea of the extraordinary variety of Turner's fantastic genius.

It would be impracticable to itemize the calendar output for the New Year of Ernest Nister, London (New York: Dutton). There is a large variety of colored and illuminated moral and religious cards; there are happy conceits for children, like the Snowball Calendar and Old-Time Memories, even "Our Baby's Calendar" with blue-tile designs; the Little Lovers' Calendar, with Japanese setting; the Venetian, best of all, perhaps; the Paris, with pictures of people and customs, not of buildings; finally, a Phillips Brooks pad and a Robert Louis Stevenson pad on goldenrod and autumn-leaf background.

The action of the Bavarian state authorities, on which we commented last week, in opening the three universities of that kingdom, Munich, Erlangen, and Würzburg, to women on the same conditions as to men, is all the more remarkable because the women contingent in those universities had been exceptionally small. Moreover, Bavaria is exceedingly conservative, and the secondary schools are not generally considered up to the high standard set by Prussia in particular. The Munich *Allgemeine Zeitung* urges the Government now to take the next consistent step, namely, to establish regular girls' gymnasia, as has been done by Baden in Carlsruhe and Pforzheim. The private girls' college in Munich is one of the best in Germany, graduating, recently, seven candidates with the *testimonium maturitatis*, which in the case of men at once admits its holder to all the departments of the University.

The anti-foreign crusade which, in a mild form, has been instituted in the universities and the technical schools of Germany for nearly two years, has now crossed the Swiss boundaries and is being rather vigorously enforced there. Here, too, as in the case of the German institutions, it is directed chiefly against Russian women in the medical departments. In Zurich the foreign element among the medical students constitutes 54.4 per cent.; in Geneva it is 77.4 per cent.; in Lausanne 70.5 per cent.; in Bern 68.7 per cent.; and in Basel 7.5 per cent. Of these foreigners no less than 73.2 per cent. are Russian women, who constitute 39.9 per cent. of all the medical students in the Swiss universities. The quota of Russian women is phenomenal in Bern, being no less than 278, or 60.4 per cent. in the department. The number of Russian students in Switzerland has been growing with alarming regularity of recent years, being 1,215 out of a total student body of 4,819, while the number of German students is only 709, and of these but few are students of medicine. The Zurich authorities have now decided that the conditions of admission for foreign students shall be materially raised; the demand being equivalent to the *physicum* examinations required by German universities for the study of medicine proper. This step was taken in justice to the Swiss and other students who can enter only under these conditions, and who have been sadly hampered by the presence of a foreign element not sufficiently prepared to do all the work.

The Munich *Allgemeine Zeitung*, in reporting the progress made in France with the Sahara Railroad project, states that three routes are under consideration. One of these goes from Igli, about 30° N. latitude, to the Niger; a second goes from Biskra to Lake Tchad, and the third from Biserta to Lake Tchad. The first route would start from the southern part of Morocco, the second from the south of Algiers, and the third from Tunis. Paul Bonnard, an authority of the first rank in all matters pertaining to Government affairs in Africa, has recently published a report in which he strongly urges the adoption of the third route. He does not, however, consider this route sufficient, but purposes another trans-African road to unite the immense French possessions in the Dark Continent, to run from Biserta by way of Lake Tchad to the Congo districts. Military reasons speak for the adoption of this route, and the distance across the Sahara would be about 500 kilometres less.

The fourteenth International Congress of Americanists will meet in Stuttgart next summer, from August 18 to 23, 1904. The three topics for discussion are "The Native Races of America," in all aspects; "The Monuments and Archæology" of this hemisphere; and "The History of the Discovery and Occupation of the New World." Communications may be in English, German, French, Italian, or Spanish. The local General Secretary is Prof. Dr. Kurt Lampert, Archivstrasse 3.

—Dr. Theodore T. Munger opens the current *Atlantic* with a discussion of some of the immediate difficulties of the Church. The chief difficulty, to him, lies in the failure of its leaders to adjust themselves unreservedly to the life of the age, especially to the changes wrought by the doctrine of evolution and by the newer methods of criticism in the field of sacred literature. The division of organized Christianity into so many sects he does not regard as a very serious evil. The attempt to hold really discordant elements together would be much worse. Sir Leslie Stephen's paper deals with his editorial work on the *Cornhill Magazine* and the 'Dictionary of National Biography.' His account of his connection with the latter is especially full and interesting, and might well receive careful study on the part of some of our high-speed dictionary and encyclopædia makers of today. Apropos of the Junius problem: "Many of the so-called arguments are on a level with the proofs that Bacon wrote Shakspere: that is, they proceed on the assumption that you conclusively establish a proposition by showing that it does not involve a physical impossibility." The editor gives a searching if brief criticism of Kipling's 'The Five Nations.' With all the evident merits of his verse, Kipling is singularly restricted in range of interest, touching a comparatively narrow segment of human interest. He writes for the young, the restless, the physically aggressive; but the part of the dare-devil, the rough rider, the free-footed pioneer, however useful it has been, is daily growing less significant. "The people who stay at home and earn their bread by commonplace occupations, who put a little money in the savings bank and perhaps go to church on Sunday, are the ones who really sway the fortunes of the world." Mr. Kipling's political and social theories are not much beyond the "beneficent-whip" doctrine of Carlyle. "His voice has never been raised for mankind. He has no word for the oppressed."

—Mr. Ellis Paxson Oberholtzer justifies a new biography of Robert Morris (Macmillan) on the plea that the diary and letters recently purchased by the Library of Congress supplies much new material. It may at once be stated that the author makes no pretence of addressing any other than a popular audience. As a readable and personal account of the man, his work is a success. But Morris was something more than a sociably inclined and rather extravagant citizen: he was the first single executive officer replacing a cumbrous committee under the Continental Congress; he was a merchant of known energy and wide connections, whose ventures in colonial days had been attended with success; he was a man of credit, with a touch of daring that made him a speculator to his ultimate ruin; and he possessed a common sense and business experience that enabled him to discern the weak points in the many financial expedients of the Congress and States to obtain funds and circulate their depreciating notes. As a merchant he stood high in his community; as the financier he becomes great because of his insistently preaching a code of high morality in public finance at a time when debt and paper money were the sole objects of legislation. Morris demanded money, and the States pleaded their poverty, their indebtedness, and their heavy sacrifices. In the end the States won and Morris resigned.

—To understand such a character and his position, a careful study must be made of the conditions of the colonies and States before and after the war. The application of economic principles to these conditions will explain how such as man as Morris became possible, and why he gained so great an influence with his contemporaries. Mr. Oberholtzer has not written as an historian or as an economist, and it is not strange, therefore, that his study is disappointing. The extracts from Morris's letters are

largely personal, and the social relations of the man are much emphasized. The reader, however pleased by the smooth and somewhat florid writer, misses what he would expect to find—an explanation of Morris's various successes and failures. Professor Sumner's book is much more illuminating, although he did not have access to the Morris papers. No one has yet pointed out in detail how so many merchants who had been successful before the Revolution failed after it, and thereby proved their incapacity to meet the new conditions. The awful debauch in paper money, the uncertainty of the times, the freedom from the burdens of taxation, and the presence of speculators willing to take any risk, produced a new type of "moneyed men" before whom the older generation went to the wall. When the elders became gamblers, as Morris did, they found themselves overmatched. Jefferson's denunciations of the new type were frequent and violent, but he was correct in recognizing its advent and influence. If Mr. Oberholtzer has failed to explain Morris's career, he has produced a very readable book, which will give the reader a true conception of the great debt of gratitude due to Morris for preaching honesty in public life when he stood in a position to gain by a contrary course.

—'The Dutch Founding of New York' (Harper & Bros.) is precisely the half serious, half humorous account of the affair one might have expected from the pen of Mr. Thomas A. Janvier. It is not and does not pretend to be an exhaustive history of the Dutch period; it is not even a brief chronological summary of the period. It is a chatty, irresponsible, and interesting discussion of various questions which suggest themselves to the author. If Mr. Janvier had any purpose other than the writing of piquant English, it appears to have been to efface as far as possible "the highly untruthful impression of the Dutch colonists of Manhattan given by Washington Irving"—a task which he admits is all but hopeless, because "artful fiction" is more convincing than "artless fact," and "Irving's delightful history" is "very subtly mendacious." Mr. Janvier protests that the Dutch were not "sleepy." On the contrary, they were very much awake—so much so that the author finds nothing easier than to draw analogies between their actions and those of very keen people of our own time, such as the Albany politicians or Mr. Joseph Chamberlain, for example. Perplexing questions, like the relative soundness of Dutch and English claims to Manhattan, or the ethical character of the English conquest, are gracefully evaded by Mr. Janvier. He is content to show that natural causes made the English conquest inevitable. Nor does he lack good reasons for thinking that the result was beneficial to all concerned, most of all to the Dutch colonists themselves, involving "escape from a harsh and incompetent government that crushed trade and that did much to make life unendurable, to the fostering care of a government that developed trade in every direction, and that in its treatment of individuals erred on the side of laxness" (p. 193). There are some excellent illustrations, notably a portrait of Wesselinx. Mr. Janvier's quaint humor is not improved by the too frequent use of slang phrases, such as "light sparring of the second round" (p. 37), "clean fall" (p. 39), "won through" (p. 44), etc. His judgment is generally correct, though he certainly overestimates the ability of the excellent and wordy Bellomont (pp. 110, 195). The index is good. The book is well printed on excellent paper, and tastefully bound.

—'Select Statutes and Other Documents Illustrative of the History of the United States, 1861-1898,' edited with notes by William MacDonald, has appeared from the press of the Macmillan Co. It is the third of a series covering the whole field of American history which Professor MacDonald has prepared for use in schools and colleges—a series already so well and favorably known that, in characterizing the present volume, it is scarcely necessary to say more than that it does for the period of 1861-1898 essentially what the 'Charters' did for the colonial period, and the 'Documents' did for the period 1775-1861. Two points should, however, be noted. The first is that precisely one-half the space is devoted to the eight years following 1861, while 82 of the 131 documents fall within the same period. Another point to be noticed is the entire omission of documents relating to the Public Lands and of all court decisions. Professor MacDonald explains these omissions by saying: "I have thought it better to omit entire classes of documents—for example, those relating to the Public Lands—rather than to give a topic, however important, a fragmentary representation." In excluding the subject designated, Professor MacDonald has necessarily excluded the subjects of education and railroad transportation. Teachers, we believe, will not altogether agree with the compiler as to the wisdom of these omissions. For purposes of class-room work it is neither necessary nor desirable that any topic should be exhausted; what the teacher wants is important or typical documents, sometimes in full, often only in important parts. We doubt, indeed, if there is any teacher of American history, who makes use of Professor MacDonald's series at all, that would not choose to have had him include the act for the Land Grant colleges, the Homestead Act, portions of three or four important Supreme Court decisions, such as the Slaughter House cases and the Legal Tender cases, rather than that these subjects should be ignored. Aside from this qualification, the work of editing has been well done, and Professor MacDonald is to be congratulated on having completed a task which was so well worth doing.

—From the Macmillan Co. we have 'The Life and Public Services of Simon Sterne,' by John Foord. Properly enough, it is the public services of this public-spirited man that are made prominent. Hardly had he come to man's estate when he began his career as the advocate of political reform, and there has been no movement to better our State for a generation that did not receive vigorous and enlightened support from his tongue and pen. He was one of the founders of the American Free Trade League, and perhaps the chief expounder of the scheme of proportional representation devised by Thomas Hare. He was the secretary of the celebrated Committee of Seventy, which did so much to rescue the city of New York from the Tweed administration; and the charter presented by the committee was largely prepared by him. Although Governor Hoffman vetoed this charter, many of its features have been gradually adopted. Proportional representation is still in futurity. Perhaps the most distinguished service rendered by Mr. Sterne was as counsel before the legislative committee which, in 1879, investigated the conduct of their business by the railroad managers. The evidence brought out by Mr. Sterne's mastery of the subject was of the highest value, and his summary of the case is a classic in the literature of economics. The labor performed by Mr Sterne in his multifarious activity was enormous, and without ever holding office he may be said to have worn himself out in the public service. He succeeded in passing few of the measures which he urged, but the country would have been fortunate had it accepted his guidance. It will be fortunate if it has citizens who will labor for its welfare with his ability and his devotion.

—A year ago the *Nation* called attention to the first volume of Kirchner's 'Prosopographia Attica' (Berlin: Reimer) as a valuable auxiliary for students of Athenian history and biography, being especially useful to those who desire to consult the original sources of knowledge. The second volume has now appeared, completing the work. The first volume contained in alphabetical order the names of nearly nine thousand citizens of Attica; the second volume contains more than six thousand such names, with precise references to the inscriptions or works of literature in which these names occur. Occasionally convenient genealogical tables are inserted, *e. g.*, for the family of Plato, from 644 to 328 B. C., and an even larger table for the family of Megacles. Fitly enough, no other man receives so much space as Pericles, for whose life the references cover four pages, while two pages each are given to Plato and Sophocles, with a little less for Socrates. The names of the favorite Athenian divinities, for whom children were named, belong to the first half of the alphabet, and no name occurs so frequently in the second volume as several in the first volume. Most frequent here are the names formed on the stem of *Nikĕ, victory*, as Nicias (of 58 persons), Nicocles (24), Nicodemus (22), Nicomachus (35), and Nicostratus (55). An appendix, in somewhat smaller type, contains the same names, arranged by demes, with references to the main work. This enables the reader to see at a glance the political connections, and, though chance has had much to do with the preservation of lists of names, of this deme or of that, yet we find, as we expect, more names (374) of members of the Acharnian deme than of any other, while of the Hippotomadai only seven are known. A second appendix gives a convenient list of Athenian archons and scribes, with references to the body of the work, extending to about the beginning of our era.

EVOLUTION OF THE JAPANESE.

Evolution of the Japanese, Social and Psychic. By Sidney L. Gulick. New York: Fleming H. Revell Co.

This work is a serious inquiry into the question of the ability of the Japanese islanders to become, in their social organization and in the workings of their minds, a

substantially different people, similar in all vital respects to those in the Occident or of the most advanced nations of the world. The author asks whether there is any real reason why the Japanese of, say, the twentieth or twenty-fifth century must reproduce in himself the type of the individual in society of the Japan of the eighteenth century. Are heredity and environment invincible, or may both be very materially transformed?

Dr. Gulick answers most decidedly that they can; that Japan has already been, in part, self-reformatory, and is likely to be in the future even more so. He thinks that a great many foreign writers have kept up an illusion by picturing this nation as passing through a revolution instead of an evolution. Their superficial views and methods of interpretation are, in his view, fundamentally erroneous. "Never, perhaps, has the progress of a nation been so manifestly an evolution as distinguished from revolution. . . . The actual process by which Old Japan has been transformed into New Japan is perfectly natural and necessary, . . . a development from within, based upon already existing ideas and institutions. . . . New Japan is the consequence of old endowment and new environment." In a word, evolution, the progress of which can be traced for at least a millennium and a half, has prepared the nation for its latest step. What was necessary was an alteration of environment. Dr. Gulick notes the danger into which many fall of ascribing to Japan an attainment of Western civilization which the facts will not warrant. She has secured much, but by no means all, that the West can give.

Besides his experiences in Hawaii, and the fact that he is master of his subject on the academic side, Dr. Gulick has had other advantages for such a study. He has spent many years of residence in Japan as a teacher of the Japanese, so that he knows the working of the native mind, is familiar with its photographs in literature, and has studied the native civilization in Kiushiu, one of its oldest seats. His book of 457 pages would have been improved by condensation, and the argument would have been strengthened by being shortened one-half. Furthermore, his contention could have been reinforced by the study of the Japanese physique, for here some of the changes within a generation have been startling. In the sixties, practical musicians and medically trained Western students of the native voice declared it to be a physical impossibility for a Japanese, even when caught young, to master our diatonic scale. They even went so far as to plan a new system of notation for the American schools in Japan. Nevertheless, one lady, who believed in the power of aid through human inspiration and in the psychic moment, after having labored long and faithfully with a single boy, astounded the savants by having her class sing the standard tunes of America and Europe. Not only do Japanese vocalists now sing difficult operatic pieces, but the late E. H. House, a director of the Imperial Court Orchestra, with trained natives, rendered oratorios in Tokio.

The use of the chair has lengthened the legs of the Japanese, after centuries of vicious habits of sitting had shortened them. Long squatting for hours at a time on the mats, with limbs doubled up under them in chairless rooms, lack of exercise, and poor diet, made them dwarfish. While of right proportions above the middle, the Japanese man was deficient in stature below, through the shortness of the legs, even to the extent of from half an inch to two inches. Now, after a generation of chairs, tables, and the changed school and house attitude, aided by improved exercise and diet, the legs of the present generation have notably increased, averaging in the school population an inch. In the army and navy, not only have the old decimating diseases been almost wholly eliminated, but weight and stature have increased and the average length of life also. In the navy, twenty thousand men, weighed and kept under close examination during five years, showed an increase of avoirdupois as compared with those of the average in the previous generation of over three pounds.

Confining himself, however, to social and psychic matters, Dr. Gulick, after preliminary discussion, demonstrates the great sensitiveness of the Japanese to environment. He pictures their extreme emotionalism, hero-worship, love for children, cheerfulness, industry, and manifold other qualities which reveal a rich and varied nature. The abundance and range of his illustrations show that he is far better acquainted with the Japanese, to-day and historically, than are most of the writers on Japan. As respects humane feelings, it is demonstrated that customs and habits which, in the matter of cruelty, have shocked every foreign resident, were the result of certain systems of ideas—a sociological not a biological characteristic. Above all things, the Japanese are æsthetic, but in their development of art they are unbalanced. Slight attention is paid to the human form, and fondness for the abnormal in nature is marked. While it may be true that "Western taste debases Japanese art," there is much aboriginal æsthetic defect, a subject on which native writers are not entirely silent

The author thinks that Professor Chamberlain and others have exaggerated Japanese "imitation." He instances the remarkable developments which Buddhism in Japan has undergone, and the many original accretions it has received. He attributes much Occidental misunderstanding to our ignorance of a true Japanese history of thought. Certainly, the field of the history of Japanese morals and development of thought awaits some Lecky. Furthermore, in all attempts to make a map of the Japanese mind, or to discuss environment and supposed heredity, one must remember the incubus of governmental initiative, which hampered Japanese growth very much as a gardener dwarfs pine trees to the height of inches. In a word, the Japanese is in moral action very much of an automaton, and is a gregarious member of a flock, not an asserter of individuality. Very few have inquired into the reasons of the gentleness and politeness of the Japanese common people. Those who have done so, know that these are not alone of Buddhism, but of a thousand years of oppression by the sword. So, also, the astonishing docility of the women of old Japan, from the Empress to the *eta*, is the direct result of environment, and of repression sternly exercised for ages. It is highly probable that the Chinese woman, in breadth of training in the practical pursuits of life on the higher levels, was the superior of her Japanese sister. Though foreigners are surprised at the vigor of the Empress Dowager in Peking, there seems nothing extraordinary in such a phenomenon, when possibilities and training are considered. On the contrary, in Japan, the Emperor's wife was not, until within the present reign, an Empress in the Occidental sense of the term. She was merely a lady selected from among the eligible daughters of certain families and gazetted on a certain day as the consort of the Son of Heaven, but was without those great personal or official honors such as are naturally in Western minds associated with the station. There are, indeed, nine names of female mikados, but these all occur in the days when the throne was as to power only a shadow. Such a state of things could not exist in the change of atmosphere and environment. Hence in treaty days, and especially since Japan has been admitted to the equality of nations, all this has been changed. One of the things which the Japanese took most to heart was the refusal of foreign courts to go into mourning when the mother of the present Emperor, who was a concubine and not the original Empress herself, died. Nothing is more remarkable or more marks the real advance of Japan than this exaltation of woman in the person of the Empress. Furthermore, the average Japanese maiden of to-day, in her outlook on the world, her longings and possibilities, is a very different person from her grandmother.

Dr. Gulick handles all those subjects connected with the inner life of the Japanese Court and family with delicacy and proper reserve, yet with frankness and clearness, in the interests of truth. Many of his statements must give pain to his Japanese friends; and yet, if the new allies of Great Britain are to receive permanently real recognition of equality before the world, and not merely the empty forms of diplomacy and politeness, these subjects must be put under the X-ray of scientific scrutiny. The author's discussion of what constitutes modesty or immodesty is interesting, not because of a Yankee parson's pious horror, but because he treats the "natural indifference of the Japanese to the exposure of the unclothed body as an interesting fact." Lafcadio Hearn has said that what we term privacy in the Occident does not exist in Japan. The language lacks the term. It is not easy to explain the English word, nor have they any clear idea of privacy, because they lack the practice. The promiscuous use by both sexes in nudity of a public bath house, and a multitude of other facts, show conclusively that the Japanese is still a gregarious being. He has not reached the Western sense of individuality.

As against those writers who have touched the psychology of the Japanese on the surface, Dr. Gulick denies that the Japanese are "impersonal." He supports well his argument from language and from intimate personal knowledge, and, in a luminous chapter devoted to examination of Buddhism, he proves that it is abstract, but not impersonal. He examines the traces of personality in the three religious systems of Buddha, and Confucius, and Shinto, reaching the conclusion that the Japanese social and psychic characteristics are not inherent. He doubts, and he doubts like a master, whether the East is inherently

meditative and the West active, and gives his verdict that the Japanese evolution, social and psychic, is not exceptional, but according to law. The work is a real addition to science.

Recollections, Personal and Literary. By Richard Henry Stoddard. Edited by Ripley Hitchcock, with an Introduction by Edmund Clarence Stedman. New York: A. S. Barnes & Co. 1903.

The defects of these Recollections are obvious, but they have qualities that amply justify their publication. It is not, perhaps, a defect that, after reading them, one feels that he would now like to read a good biography of Stoddard. Writing them, he was thinking much more of his friends than of himself, and he has not given us a connected account of his personal and literary life, while the criticism on the latter which a good biography would include is quite absolutely wanting here. The different chapters seem to have been written independently of each other for the most part, and there are serious gaps in the course of the writer's life as here described, and some things hard to understand. We have, in short, an old man's book, with little of dry light upon the page; with here and there a blotted line, as if memory had exacted the tribute of "some natural tears."

Mr. Stoddard's recollections are the more interesting because they do something to redress the scales of literary reminiscence, in which the preponderance of Boston men and things has heretofore been conspicuous. For though Stoddard was born near Boston, the greater part of his life was spent in New York, and, hardly less than Poe, he maintained an attitude distrustful of the superiority of the Boston literary set. It is plain that he shared Poe's indifference to Emerson, and in general his dislike for the intellectual seriousness and moral passion of the New England school. The didacticism of Longfellow was an offence to him, and he would have liked Lowell better if he had abstained from anti-slavery and other reformatory poems. In this respect Whittier was to him an object of particular dislike. On the other hand, he was much drawn to Hawthorne, sympathizing with his Democratic politics and his aloofness from the anti-slavery reform. Seeking to forward his prospects for a Government office, Hawthorne wrote a letter of advice to him which was extremely shrewd and cynical—one sign of many of a certain duality in Hawthorne, a level of taste, if not of character, below that of his genius. That politics as well as misery makes strange bedfellows, is shown by such a conjunction in Stoddard's favor as that of Hawthorne and the Hon. Charles G. Atherton, best known in anti-slavery circles as the inventor of "Atherton's gag," a device for choking off anti-slavery petitions.

Stoddard's story of his boyhood is a painful one. His was that greatest of all possible misfortunes, a mother whom he could not respect or love. She subjected him to work for which he had no aptitude or sufficient strength, culminating in an iron-foundry from his eighteenth year till his twenty-first. If he had not been born a poet, he would not have been made one by these hard conditions. The wonder is that they did not kill at once the poet and the boy. The most serious gap in the narration is between the close of the iron-foundry period and his beginning at the Custom House—seven years that must have been highly significant. Doubtless particulars are given that were related to these years, but the relation is not made plain in a chronological sequence. "My Life in the Custom House" is a chapter that introduces us to some of Stoddard's Custom House acquaintances. One of these was Capt. Rynders, under whose genial auspices Mr. Stoddard and his wife went to a Tammany ball. Nowhere does Mr. Stoddard commend more boldly than when writing of his wife's literary performance, and probably nowhere more justly. They married, trusting much to an uncertain future; but the Custom House appointment soon followed, and on three dollars *per diem* they found themselves rich beyond the dreams of avarice.

What is written here of N. P. Willis is a generous appeal from the usual depreciation of that picturesque representative of an earlier society. It was his "Saturday Afternoon" that first touched the poetic sensibility of young Stoddard's mind. Some deduction must certainly be made from Willis's standing as a poet and a gentleman as given here, but his great consideration for and kindness towards young authors are not too cordially approved. Bayard Taylor was one of his discoveries, and Taylor's 'Views Afoot' took up the parable of Willis's 'Pencillings by the Way.' Taylor and Stoddard were the best of friends, and the rank assigned to Taylor is accordingly as flattering as the chapter which Mr. Stedman assigned to him in his 'Poets of America,' thereby exciting many doubts. There can, however, be no doubt of the mutual incitements of Taylor and Stoddard, convivial and poetic, Hardly less prized than Taylor was Boker; and another "likable young poet," to whom he was much drawn, was Stedman, of whose "Penelope" he writes with fine bravado that it "was and is worthy to be read with Tennyson's 'Ulysses.'" Much of the way we skirt the coasts of Bohemia in a delightful manner, making a landing at "Read's Home at Bordentown." The "Glimpses of Thackeray" add little to our previous impressions. A chapter on Bryant is the most solid in the book, and was probably written for the most part at the time of Bryant's death. Imagination is claimed for his poems above all others written in America, and a form of "blank verse which is the best that has been written by any modern poet." It should be understood that when he writes of Cummington, Bryant's birth-town, as standing in "a broad highland region," he writes of old Cummington. Cummington is now distinctively a valley town; and when we read of "the quiet waters of the Westfield," we know that Stoddard never saw its scanty water worried by a stony bed.

One chapter, "Meetings with Poe," would add fuel to a flame that burns hot enough already if Stoddard's view of Poe had not long since been duly weighed and measured against others of a more favorable character. When Stoddard brought Poe an "Ode on a Grecian Flute," Poe did not dissemble his doubt of Stoddard's ability to write it, and came near to kicking him down stairs. The outrage veiled a flattery, and with this reflection the young poet salved his wounded pride. There is nothing flattering in Stoddard's characterization either of Poe's genius or of his character; neither is there anything final. Poe was no doubt "a curious compound of the charlatan and the courtly gentleman," and both mendacious and dishonest, taking money on the promise to review a worthless book and not keeping his promise. That "his invention was boundless" is an astonishing judgment, and that "his later poems are simply melodious madness" is not one that will stand. Indeed, these 'Recollections,' as a whole, are more entertaining for the liveliness of their personal equation than convincing on their critical side; nor does it appear that Mr. Stoddard's sense of the value of mere facts was so keen as his scent upon the trail of that fugitive beauty of expression, the desire for which was the alluring passion of his life.

The library edition of these Recollections is the comely product of the University Press at Cambridge, Mass., and the typographic excellence is glorified in the large-paper edition, limited to 200 copies, printed on Strathmore Japan paper, and much more copiously illustrated with portraits and with a remarkable series of literary autographs, English and American. The binding is harmoniously elegant, in vellum back and blue paper sides.

Highways and Byways in South Wales. By A. G. Bradley. The Macmillan Co. 1903.

The American tourist is too apt to take his impression of Wales from the coasts of the northern counties, overrun in the tourist season by Saxons from Liverpool and the manufacturing towns of the northwest of England. He is lucky if he can keep his memory of Conway and its beauties unobscured by the desolating vision of the lodging houses and villas of Llandudno or Penmaenmawr. If he wants to see into the heart of "wild Wales" he must give the coast watering-places a wide berth and travel southward, inland, through beautiful Merioneth into Radnor, where Mr. Bradley's book will be his best guide to the scenery and life of South Wales. Mr. Bradley is an historian with an antiquarian bent, and for one who reads his book the complex and neglected history of Wales, her patriots, her partisans, the romance and pathos that are inevitable in the story of a Celtic nation, will unfold much of its interest. The tangled tale of the Lord Marchers and their struggles against each other and the Anglo-Normans, until Henry VIII. reorganized the principality and called Welshmen to the English Parliament, must always seem a confused Iliad of violent deeds. But one must know at least its outlines or fail to understand the topography of Wales; the significance of its feudal castles, the strategic points of that great battlefield in the days, when

"A post from Wales, laden with heavy news,"

could shake the English court and balk Henry the Fourth's plans for a crusade. Through Mr. Bradley's pages, "the irregular and wild Glendower," the Llewelyns, and the other native princes whose personalities, after 800 years, overshadow each his own special region, gradually become familiar and distinct. This personal note in

the atmosphere of Wales is wholly un-English. Over England

"the Norman conquest hangs like a pall, enveloping the whole country, and, in the ordinary mortal's mind, quite devoid of local name or luminous incident. Only a student here and there could link his Wiltshire or his Hampshire or his Suffolk with any ruling race or personality connected with that period. . . . But in Wales and the Marches, the story is plain for every one to read. These men who carved out kingdoms, and made laws, and built great buildings, and fought scores of bloody fights, . . . are household words. . . . Fancy any part of Wales having to fall back on recent fiction to vitalize its landscape!" (p. 373).

The conquered have, indeed, long memories; how should it be otherwise, seeing that only the past is theirs? In the twelfth and thirteenth centuries Wales truly lived; was in the world of action. Now, where the bloodiest battles were fought you may see in South Wales wide stretches of bog and moorland, with turf-cutters and shepherds for the only population—Ireland itself, one would think, only that the hamlets and lonely cottages show no signs of dilapidation and dirt. Ireland has many old castles, but none that compare with the great feudal castles of Wales, standing out on the hills and scowling at you from miles off. It was from South Wales that Doré is supposed to have drawn those wonderful and weird castles and gloomy forests with which he illustrates the 'Idylls.'

The literary history of South Wales deserves some notice. Mr. Bradley often finds himself following in the footsteps of George Borrow, or of Drayton or Dyer the poets, or of the eccentric Lady Hester Stanhope, who, after the death of General Moore, retired from the world to settle at Builth in the Wye valley. Mrs. Siddons and Charles Kemble were born at Brecon. But the most interesting of these more modern associations is that of Shelley, who for a time made his home in Radnor in a country house named Cwm Elan. After his abrupt departure from Oxford in 1811, Shelley came to stay with his cousins in the Elan valley, and in the following year brought his young wife Harriet to Nantgwyllt, a neighboring grange. An old woman still alive in 1878 is reported to have remembered Shelley as "an eccentric but winsome-looking lad, who used to amuse himself by descending the rushing torrent of the Elan on a plank, and on one occasion, at any rate, she could recollect him sharing his narrow bark with a protesting cat" (p. 90). Those interested in the haunts of Shelley may regret to learn that both the houses in which he lived in the Elan valley will soon be submerged by the lake which is being constructed by the corporation of Birmingham as a part of its gigantic waterworks. Two or three years, however, must pass before the great dam is completed. It is to be two hundred yards in length, well over a hundred feet in height, and as many in width at the base. Over it will pour continually two or three feet of compensation water which the corporation is bound to pay into the River Wye. Thus the largest cataract in the kingdom will be evolved from this utilitarian scheme, which, when the works of construction are taken away, will give to this part of Wales several new lakes and an assured solitude in its beautiful mountains. Eight millions sterling is to be spent on the waterworks; the water will be carried through seventy miles of aqueduct to Birmingham at the rate of sixty million gallons a day. The system will have an important effect on the waters of the River Wye, which will be much to the advantage of those who boat and fish in that most famous of Welsh rivers. At present its supply of water is very uneven, frequently disorganized by freshets from the mountain streams; but by means of the compensation water of the Birmingham reservoirs a steady flow will be maintained.

Mr. Bradley gives an interesting account of "knappan," a sort of national Welsh football, in which the ball was thrown instead of kicked. "The distance between the goals was several miles, running with the ball was the chief method, and the players reached on occasions the formidable number of two thousand." The ball was of hard wood, well greased, and could just be grasped in one hand. The matches were between particular districts, and the game was regarded as the best training for war. Horsemen took part, and were allowed to ride with the ball; there were no spectators, because if one came near enough to look on, one was forced into the game. George Owen relates that in 1588 the Spaniards were off the coast with their "not truely termed invincible navy." A great match of knappan was going on in view of the sea, and a mariner sailing by asked how peace would be restored, and was surprised when he heard it was all a pastime. "If this be playe," he said, "I could wish the Spaniards were here to see our plaies in England, certes they would be in bodily fear of our warre." These knappan players were no doubt the ancestors of the South Welshmen who have for years beaten the pick of all England at Rugby football.

The distribution of the language is, as one would expect, most uneven. Welsh shows little sign of dying out, and you will often stumble on a district where English is of no use to the traveller. A few miles farther on, a Welshman would be as unintelligible to the inhabitants. The Welsh maintain a natural barrier of exclusiveness that has lasted for eight centuries. They have maintained it, too, without the quarrels or feuds of the Scotch-Irish. But the English and Welsh in such a county as Pembrokeshire, which contains a little insulated district where pure English is spoken, keep obstinately separate. A Welshman appointed to any office in that English district would be politely ignored, literally *tabooed*. The English, who were planted there by Strongbow, have remained absolutely apart in their "Little England beyond Wales." The Welsh are fully as exclusive. Only on the actual border is a certain amount of inevitable fusion of the Celt and Saxon.

Mr. Bradley does not include Glamorgan or Monmouth in his descriptive tours. The latter is technically outside Wales; but it is unfortunate that Glamorgan, which, in spite of its industries, possesses some of the finest scenery in Wales, should have been left out of so excellent a guide-book. The numerous illustrations by Mr. F. L. Griggs are fully up to the standard of the other volumes of this charming series.

Thirty Years of Musical Life in London. By Hermann Klein. The Century Co. 1903.

The question whether a musical critic should be on terms of personal acquaintance with the artists he has to comment on, has been often discussed. Mr. Klein, who was one of London's leading critics for more than a quarter of a century, touches on it in his preface. "I trust," he says, "that I have succeeded in accomplishing my task without overstepping the border line which should separate the friend from the critic. I have always watched that delicate yet important boundary with scrupulous care; and, happily, I have found it easy to obey without loss of good-will or esteem on either side." Readers of his book will soon discover that he is one of those who would rather dwell on the merits of artists than on their shortcomings This attitude made it easier for him to be intimate not only with the great men and women of the musical world, but with many of the lesser lights. He had the privilege of being well acquainted with most of the ninety-seven well-known musicians whose portraits adorn his volume; he has many interesting things to say about them, and his book may be briefly described as a "personal" history of music in London during the last three decades of the nineteenth century.

Mr. Klein's early reminiscences call attention to the fact that not till thirteen years before Wagner's death was one of his operas performed at Covent Garden. It was "The Flying Dutchman," masquerading under the Italian title of "L'Ollandese Dannato." Five years later (1875) came "Lohengrin," which got what Mr. Klein is inclined to think was the worst performance of it ever seen at an important theatre. And yet "it culminated in a tremendous climax of enthusiasm," and Mr. Mapleson promptly mounted it at Her Majesty's with a cast including Nilsson, Tietjens, Campanini, and Galassi, but with a counterweight at the conductor's desk in Sir Michael Costa, whose chief interest used to centre in the proceeding of the swan, of which he invariably spoke contemptuously as "dat goose." From this time to the end of the century Mr. Klein gives an interesting history of Wagnerian opera in London. It was his privilege to determine the course of events in a vital manner; he dwells with justifiable pride on his successful efforts, one summer at Ems, to interest the De Reszke brothers and Lassalle in "Die Meistersinger"—efforts which led to their going to Bayreuth in 1888, and, after hearing it there, making up their minds promptly to appear in it themselves—at first, of course, in Italian, which at that time was the universal language of grand opera, except in France and Germany. As late as 1896 there was the absurd spectacle of "Die Walküre" in French, to please Alvarez. But gradually, under Sir Augustus Harris, the policy was carried through of performing each opera in its proper language.

It was as friend and adviser of Harris that Mr. Klein had further opportunities to shape the course of events. One of the most interesting episodes described by him was a visit to Spain to secure singers and, incidentally, scenic local color for a performance of "Carmen." On one occasion, when there was a sort of gala night, Harris imagined it would be interesting to have all of his three conductors alternate in it; the result was such that "the childish ex-

periment was never tried again." One of the luckiest incidents in Mr. Klein's career was an accident which placed him alone with Tchaikovsky in a railway carriage on a trip to Cambridge. Particularly readable, too, is a long talk which he had with Dvorák (pp. 163-169). We also meet, more than once, with Sir Arthur Sullivan, whose weak point was his hatred of foreigners, which made him object even to the presence in England of Hans Richter. Sullivan was for many years a bitter opponent of Wagner, but in 1893 Mr. Klein came across him at the opera one evening listening to "Die Meistersinger," with the full score before him. "You see," he said, "I am taking a lesson. Well, why not? This is not only Wagner's masterpiece, but the greatest comic opera ever written."

A number of interesting letters from great artists to Mr. Klein are included in this volume. In an account of his first appearance before the Queen at Windsor, Jean de Reszke writes:

"I found her extremely well, charming in manner, speaking French like a Parisian, and a genuine lover of music—as one could easily see by her eyes and in the movements of the head with which she emphasized the chief passages."

There are several letters from Mme. Patti, and detailed accounts of her life and amusements at her Welsh castle. Mr. Klein coached her in her first attempts to sing Wagner. In 1901 she went to Bayreuth, and shortly afterwards she wrote:

"I must send you first these few lines to tell you how immensely I was impressed by the Bayreuth performances. I never could have imagined anything so perfect as the *mise en scène*, and I thought the 'Ring' simply divine. There are no words to express it; it is all so wonderful and beautiful. I thought 'Parsifal' was *glorious*, especially the last act, and I am indeed glad to have heard all these marvellous works."

Notes and Reminiscences of a Staff Officer. By Col. Basil Jackson. E. P. Dutton & Co. 1903.

In 1877 Col. Jackson, who was a veteran and hero of Waterloo, printed for private circulation a little volume entitled as above. It is now republished by permission of Mrs. Simcoe, the author's daughter, and Mr. R. C. Seaton has added to the text a set of notes. Col. Jackson's jottings cannot be styled an autobiography, for they are too fragmentary and limited to deserve that name. They are neither pretentious nor labored, and their air of simplicity gives them at least the guise of truth. Two historical incidents, and only two, are dealt with—the Waterloo campaign and the treatment of Napoleon at St. Helena.

In the Waterloo campaign, Col. Jackson was intrusted by Sir Hudson Lowe with the task of surveying routes, and one of his reports, transmitted to Gneisenau, seems to have determined the course which the Prussians followed after the battle of Ligny. One must distinguish between the narrative and the critical portions of the present work, the former being decidedly the more important. There are, to be sure, obvious errors in statement of fact (as when it is said that Napoleon gave Soult no command during the Hundred Days), but these slips relate in the main to matters which lay beyond the writer's own range of vision. On the side of criticism, Col. Jackson's most interesting remark relates to Waterloo:

"The tardiness of the allied generals, especially Wellington, may be said to have jeopardized the fate of Europe; for had both armies been so situated as to afford each other mutual support, a single battle would have settled the campaign; for the Allies would have engaged with a force nearly double that of the French; the result, therefore, could scarcely have been doubtful. . . . But nothing succeeds like success. The Duke is reported to have said that, if he got into a scrape, his soldiers got him out of it. I cannot but think that Waterloo is a striking instance."

More important than Col. Jackson's criticisms upon Waterloo are his statements regarding St. Helena. Mr. Seaton, the editor, is the Forsyth of the present generation, and has already defended Sir Hudson Lowe with great vigor. His part in securing the reprint of these 'Notes' may, perhaps, be traced to his wish that Lowe's memory should be freed from reproach by the publication of favorable testimony. He contradicts the statement which appears in the 'Dictionary of National Biography,' that a son of Sir Hudson Lowe married a daughter of Col. Jackson. As a matter of fact, the persons in question were not even acquainted with each other. Jackson served Lowe and was devoted to him. He was also on intimate terms with the members of the Longwood staff—Bertrand, Montholon, Las Cases, and Gourgaud. The anecdotes of the Emperor which are related in these pages seem almost uniformly unfriendly, and long quotations from Forsyth add little to the value of the narrative. At the same time, Col. Jackson's defence of Sir Hudson Lowe must be accorded considerable weight. He says in so many words that his principal object in writing about St. Helena is to justify the Governor against the aspersions of the Emperor and his friends. The biographical sketch of Lowe which follows this profession of purpose is simply a résumé of military services, accompanied by a strong encomium from Gneisenau. The chief thing is, that Jackson felt a good deal of enthusiasm for his superior, and was willing to come out strongly in defence of his fame. The narrative may, on the whole, be called an artless one, but running through it is a spirit that finds expression in the words with which Jackson closes: "I think that those of my friends to whom I shall send copies of my little publication, will now be of opinion that I may take a pride in having been honored with the regard of Sir Hudson Lowe."

Wood-Carving: Design and Workmanship. By George Jack. With drawings by the author and other illustrations. D. Appleton & Co. 1903.

The aim of the Artistic Crafts Series, edited by W. R. Lethaby, to which Mr. Jack's present handbook belongs, is to put before art students the advantages of being trained in the artistic crafts as a means of making a remunerative career, rather than attempting to be painters and sculptors without any very special genius. The increasing demand for decoration in every form brought about by the lavish expenditure of the wealthy should furnish employment to those who, by patient application and perseverance, attain the dexterity of hand and perfection of workmanship which are indispensable as equipment for artistic crafts. Mr. Jack considers that there is a life's work to be well expended in the practice of wood-carving for any one who has enthusiasm to follow the development of this art, closely allied to architecture and sculpture in the past. He treats of wood-carving from the point of view of the trained workman, and gives efficient advice as to the implements required, and how to handle them; but he counsels the serious student to apprentice himself to a good craftsman, in order to acquire the manual practice and the traditional expedients not otherwise to be attained. He insists, however, that this apprenticeship must not preclude the development of the intellectual side of the art and the wide possibilities it offers, since invention and execution should progress together. He gives valuable hints as to how far it is desirable to revert to the past in choosing subjects and in the treatment of them. To be well equipped, the student must be a trained draughtsman; he must also study architecture, which ought to be regarded as a larger kind of carving, since, when he attains proficiency, he will seek architectural occasions for wood-carving. Mr. Jack urges the student to be a close observer of nature, and to study the form of leaf and flower and tree, and to draw from living animals so as to know their movements and habits. Photographs he considers useful when familiarity with their subjects has been already acquired by sketches from life of sectional structure; the aim of art being the representation of some form of life, expressed with strict economy of detail and accurate calculation as to the effect of light on the work.

The most valuable training of all is to see old work in its proper surroundings with the effects of time and use, and thus observe the amount of labor and finish which tells, and its relation to breadth of design and the simplification of detail. Our author is right in denouncing slavish imitations of ancient work for modern purposes; but when the question of restoration of an ancient building comes up, it seems unreasonable to blame the workman for deception because he has so closely followed the old that his part cannot be detected. Mr. Jack cites the choir stalls and screen of Winchester Cathedral as a case in point. It seems to us that the only blamable proceeding was the staining of the old and new together, thus destroying the texture of the wood and the patina of time. In this disapproval of faithful restoration our author shows himself to be a close follower of Ruskin.

The book is full of excellent illustrations.

Boston: The Place and the People. By M. A. DeWolfe Howe. Illustrated by Louis A. Holman. Macmillan Co. 1903. 8vo, pp. xv., 397,

Boston "is not an accident," wrote Emerson of his native city, "but a seat of humanity, of men of principle obeying a sentiment and marching loyally whither that should lead them; so that its annals are great historical lines, inextricably national—part of the history of political liberty." The felicity of this characterization will be felt by all readers of Mr. Howe's book. In the prosecution of his aim, not to write a continuous narrative, but "to pass in review the salient facts of Boston history,

and to gain some acquaintance with the persons chiefly concerned in them," he has set forth most clearly and freshly its individuality, that which differentiates it from other New World cities. With apt quotation and anecdote from letters, diaries, and old-time records, he graphically pictures the colonists and Revolutionary fathers and their town. The larger part of his book, however, is devoted to the nineteenth century, the three main topics being the Unitarian controversy, the men who made Boston for a time the literary centre of the country, and the anti-slavery propaganda. These chapters show careful and sympathetic study; the still delicate subject of the religious movement inaugurated by Emerson being treated skilfully and with commendable impartiality. Of greater general interest is the account of Boston's part in the emancipation of the slave, beginning with the publication of the *Liberator*, January 1, 1831, and culminating with the attack on Fort Wagner and the death of Robert Gould Shaw. The main facts in the recent history of the city are briefly given, and the author closes with an appreciative glance at present conditions, and a timely reminder that "the people of Boston are rich in the inheritances that are good to cultivate and to transmit."

Considering the class of readers whom Mr. Howe evidently had in mind, he has been wise in his selections from the mass of material at his disposal. Much that is curious as well as instructive is to be found in them; for example, the fact that the Puritan horror of the stage prevailed as late as 1791, when plays were advertised as "moral lectures," illustrating certain virtues or vices. "Otway's 'Venice Preserved' appeared as such a lecture in five parts, 'in which the dreadful effects of conspiracy will be exemplified.' To make sure, a little later, that the point of 'Macbeth' should not be missed, it was introduced by 'A Dialogue on the Horrid Crime of Murder, by Mr. and Mrs. Smith.'" Great care has evidently been taken to secure accuracy, and we have noticed but one error, the statement that there was erected a "monument to William Thomas Green Morton in the Boston Public Garden." The fact is, that it bears neither name of the two contestants, Drs. Jackson and Morton, for the honor of the discovery of ether, but, with conscientious impartiality, it is a monument (to recall the famous joke of Dr. Holmes) "To E[i]ther." Of course, in a volume of this size there must be many omissions of things of interest. We regret, however, that Mr. Howe did not find space to refer to the influence which the Boston press, under the guidance of J. T. Buckingham, Nathan Hale, their contemporaries and successors, had upon national and State politics, and upon the formation of public opinion on the great questions of the day.

The illustrations, by Mr. Louis A. Holman, are well chosen and interesting, and add much to the attractiveness of the book. His drawings of historic buildings are of unusual merit. We could have wished that, with the grasshopper vane and the pine-tree shilling, room had been found for the historic codfish.

Old English Doorways. By Henry Tanner, jr., and W. Galsworthy Davie. London: Batsford; New York: Scribner. 1903. Pp. 44. Sixty-nine plates.

This attractive volume consists of a series of photographs of old English doorways from Tudor times to the end of the eighteenth century made by W. Galsworthy Davie, whose previous work in similar fields (*e. g.*, 'Old Houses in Kent and Sussex') has shown him to be not merely a skilful artist with the camera, but a man of discernment, and of wise choice in the selection of his subjects. The plates are accompanied by an essay, historical and descriptive, by Henry Tanner, jr., whose ability to clothe with interest a definite period of architecture in England was recently demonstrated by the folio upon the work of Inigo Jones, for which he wrote the text.

The present book, beginning with a few examples of doorways of the latest Gothic in which a strong Renaissance influence is seen, leads us along by many specimens ot the curious and entertaining Elizabethan style, when all was confusion and groping, to the days of Inigo Jones, when a great light shone upon architecture in England. Some of the most beautiful plates are taken from this time and from that other equally splendid period when Sir Christopher Wren was the centre of all things architectural. If we miss the charm and freshness. the naïveté of the earlier work, in this section of the book, we find its place taken by a stateliness and dignity that well reflect the manners of the age. Frigidity was the bane of the style, but of this there appears little here; the examples, especially of the later or Georgian period, being chosen for their freedom and picturesqueness. Occasionally, some subject not strictly a doorway gives variety to the pages, as the charming porch at Cap Mill in Gloucestershire or the garden gateway at Ross in Herefordshire. The series closes with a long series of highly interesting and varied hooded doorways, frequently with carved brackets and shells of great beauty, taken chiefly from provincial towns. Quite the most charming of these, and indeed by all odds the most picturesque plate in the book, is the door of the Choristers' School in the Close at Salisbury. Broad and most inviting steps lead to a curiously quoined doorway sheltered by a hood of great simplicity. The whole entrance is embowered in vines, and the first sight of it gives a thrill of pleasure.

Apart from the interest of the plates, the essay is a thoughtful one, following, as it does, the course of doorway design in England for two centuries, and tracing the influence of materials and environment upon such design.

American Tariff Controversies in the Nineteenth Century. By Edward Stanwood. 2 vols. Boston: Houghton, Mifflin & Co. 1903.

Fifty years ago this country was in a fair way to adopt free trade. After several successful attempts at restriction, it became evident that the opposing forces were too strong, and in 1833 Clay offered his "compromise" tariff, under which duties were gradually reduced to moderate figures. The collapse of the whole system of finance in 1837 caused the low duties to be raised in 1842, but in 1846 the tariff was adjusted with regard to revenue rather than protection, and this policy prevailed until the civil war changed the whole tendency of our Government. Since that era protection has reigned supreme, and there is every reason to believe that it will maintain itself indefinitely. Duties are at the highest, the expenditure of the Government has increased enormously; and even were there any considerable number of voters in favor of free trade, they could not convince the country that it was practicable. In fact, there are probably not enough free traders to obtain official recognition as a party. Protectionism is the creed of the capitalists, the labor unions, the politicians, and, to a considerable extent, of the professors of economics.

We cannot say that Mr. Stanwood's treatise throws much light on the causes that have brought about the change. The abstracts of the debates in Congress are insufferably tedious, and the controversies are no more worth chronicling than the quarrels of the kites and crows. Of a discussion in 1830, the author says:

> "Thereupon ensued one of the most tedious and fruitless debates in the history of Congress. Day after day the members on both sides of the question delivered set speeches on the tariff, of interminable length, and quite devoid of fresh arguments and novel illustrations."

This criticism might have been extended to nearly all such debates. Tariffs are not made as a result of legislative deliberation. Professor Taussig's 'Tariff History' tells us all that it is important to know concerning the course of events; and the record of the various shades of doctrine and of the motley fallacies employed in defending them is no more edifying than the account of the disputes between the Homo-ousians and the Homoi-ousians. Mr. Stanwood's purpose, however, seems to be to defend protectionism by representing it to have made the country prosperous. For this undertaking he does not appear very well qualified. His dialectic seldom rises above the level of *post hoc ergo propter hoc*, and his attempts at connecting taxation and prosperity are almost precisely the same as those selected in Mill's 'Logic' to illustrate fallacious reasoning.

A few passages, quoted at random, require no comment. Thus, it is asserted that business instantly revived after the passage of the tariff of 1842 because of that act. "No other cause is assignable as having produced that effect. The country was in a state of unparalleled depression; the act was passed, and business revived. There was no other change in the situation either at home or abroad." It is also alleged that the trade in grain is independent of tariffs: "The utmost freedom of trade, the abolition of all customs duties at American ports, would not have increased the demand in England for American flour to the extent of a single barrel, nor would it have made the barrel of American flour a penny cheaper to the foreign purchaser." In the author's view, "there is always a tendency to overimportation." He quotes President Taylor as "high contemporary authority" for the proposition that manufactures languished under the tariff of 1846. The fact that immigrants poured into the country in great numbers "cannot be taken as even corroborative evidence that the country was prosperous." "It is generally true . . . that importations have increased at a more rapid rate when the so-called restrictive

system was in full force than when duties have been low"; but "it is not suggested that the object of a protective tariff is to encourage importations—rather the contrary is true." It is no more than fair to say that the tone of the author is dignified and free from virulence; but his work amounts to little more than a repetition of old fallacies and time-worn platitudes.

Negro Education in the South. By A. A. Gunby. New Orleans: H. C. Thomason.

It is a real pleasure to come on a book, even so small an one as this, which is full of faith that, with proper moral and manual education, not forgetting the three R's, the negro is capable of becoming a better man and citizen than he has had a chance of being up to the present time. We have been told so much lately of his inability to be benefited by any training save that of field labor, superintended by the white man, that we cannot too cordially welcome Mr. Gunby's hopeful views; for there must be many of the better educated men of the South who share them. Gov. Andrew always maintained that only the best men of that section could lead it back into cordial relations with the Union; and when we find that a Southerner of high standing, and presumably many of his friends, would have all educated negroes vote, and would exclude only ignorance, we can feel that the race problem is nearing a better solution than the late utterances of the Southern press have led us to expect.

In his introduction Mr. Gunby puts the following pertinent question to those who "are too ready to despair of the benefits . . . . of education to the negro race": "Within one generation of slavery, with no adequate teachers, with all the obstacles and horrors of the period of reconstruction, . . . how can it be said that negro education has had a fair trial?" He goes on to remind them that, in the South, "it has long since been inflexibly decreed by unwritten law that white teachers must not teach negro schools"; and that though "the Southern States have continued to tax themselves for the support of negro schools, in many places the funds for this purpose have been indifferently and unfairly applied by incompetent or partisan school boards." In addition to this increasing evil, the want of "suitable teachers and decent schoolhouses to teach in" has been sorely felt. In spite, however, of all these and other difficulties, "the large body of ignorant negroes" who "are thriftless, and work and behave themselves alone through fear," is decreasing and scattering, and "the number of negroes is increasing who have bought and paid for small farms, from forty to sixty acres." Further on, Mr. Gunby says: "All they want is fair treatment, perfect liberty, education, and, most of all, a good example and good advice from their white neighbors."

There are, perhaps inevitably, some curious and paradoxical statements in this little book. For example, the author tells us that "there is a public sentiment" in the South "which demands that the races be kept absolutely distinct. . . . This is the prompting of a divine race instinct"; while a passage in his introduction states that "in a town of 10,000 inhabitants 500 negresses are supported in idleness by white paramours." One could wish the divine instinct a little keener! Then he speaks of a young Louisiana lady who is teaching negroes in West Africa as a missionary, but who could not have done this at home on account of public opinion, and presently tells of Stonewall Jackson teaching a negro Sunday-school, and adds that no "grander picture of him could be drawn than one which represents him standing with open book before his little school of pickaninnies." Surely we may hope that white missionaries will be allowed "at home," where the need of them is at least as great as in West Africa. We are further told that there are "thousands of wretched women in the city of New York with but one garment, and that a ragged one," while "there are no unclad negro women in the South." Assuming for a moment that the facts are as here stated, it should be added that the influx of immigrants into New York, sometimes amounting to 100,000 in a single month, never ceases, and that were an equal number of ignorant negroes poured into any Southern city, probably a similar state of destitution would follow.

Whether or not Mr. Gunby is right as to the complete separation of whites and blacks being needful for the good of both, we are cordially in agreement with him as to the importance of every bit of rational and practical education that can be given the negro, and the menace which, failing this, his barbarism and ignorance may become to the country.

Pioneer Spaniards in America. By William Henry Johnson. Boston: Little, Brown & Co. 1903.

A handsome, well printed and illustrated octavo, with a number of full-page illustrations, mostly reproductions of facsimiles, among them that of the first map (1538) on which the name "America" appears, the book named above is a popular series of sketches of the principal Spanish discoveries in the first half of the sixteenth century in North America, followed by a glance at the reconquest of New Mexico and by an appendix devoted to a short essay on pre-Columbian culture in Mexico.

It is gratifying to note the spirit of fairness and of justice displayed by the author in this unassuming volume. Thus, he says of the historian Prescott in the preface:

"To speak of the conquest of Mexico and omit a reference to Mr. Prescott's classic work would be unpardonable. Equally inexcusable would it be to commend it without a word of caution. One cannot ignore the fact that he wrote before the era of first-hand anthropological study, so distinctive of our time. . . . He did the best that was possible in the then existing state of knowledge, and produced a monumental work that remains an ornament of our literature. That it is pervaded with an atmosphere of romanticism quite unhistorical was an inevitable result of the limitations of the time."

Not only in the case of Prescott does the author show his inclination to absolute fairness. Following the example so well set by C. F. Lummis, he metes out the same justice to the Spanish pioneers, and especially to the Crown of Spain in its treatment of the Indians. While condemning any wrong perpetrated upon the natives, he says (p. 32):

"Let us give Spain her due. In these sketches we have seen instances enough of savage cruelty. But these were the acts of individual Spaniards. The aim of the Spanish Government was to treat the Indians kindly, and, in the main, it was faithfully carried out. The whole policy of Spain was directed to fitting the Indians to share in the national life, making them part of the people."

This point of view is far superior to that of sweeping vituperation characteristic of similar literature in former times, and commends the book to the sympathies of modern readers interested in the subject of Spanish-American colonization.

Mr. Johnson does not claim to have made original researches. The sources which he acknowledges as bases for his book are all recent. Hence we cannot apply to his sketches any searching historical criticism in detail. His judgment of the character and actions of Las Casas is still consistent with impressions that will vanish in time as the career of this honest but utterly unpractical enthusiast is more carefully studied, and therefore better understood. The chapter devoted to Bartolomé de las Casas is the only really weak section in this very readable popular work.

Recent Books Suitable for the Holidays and All Days

Ferns: A Manual for the Northeastern States.

By C. E. WATERS, Ph.D. Illustrated. 362 pp. Square 8vo. Boxed, $3.00 *net;* by mail, $3.34.

Nation:—"A substantial addition to the Fern library for general readers . . . well written and interesting . . . exquisite photographic reproductions."
Plant World:—"This book is likely to prove the leading popular work on ferns. *No finer examples of fern photography have ever been produced.*"

Mushrooms, Edible and Poisonous. By Prof. GEO. F. ATKINSON, of Cornell.

With recipes for cooking by Mrs. S. T. RORER, and their chemistry and toxicology by J. F. CLARK. With 230 illustrations from photographs and colored plates. Second Edition, with additions, 320 pp. 8vo. $3 *net;* by mail, $3.23.

Educational Review: "It would be difficult to conceive of a more attractive and useful book."

Napoleon the First By A. FOURNIER.

Translated by MARGARET B. CORWIN and ARTHUR D. BISSELL. Edited by Prof. E. G. BOURNE of Yale, with a full *critical topical bibliography.* 750 pp. 12mo. $2 *net.*

A work that in its French and German editions has been generally recognized as the best life of Napoleon in moderate compass.

The Laws of Imitation By GABRIEL TARDE.

Translated by Mrs. Elsie Clewes Parsons, Ph.D., with an introduction by Professor Franklin H. Giddings of Columbia. xxx+404 pp., 8vo, $3.00, *net;* by mail, $3.20.

A remarkable book showing the part that imitation plays in language, art, law, institutions, and crime.

N. Y. Commercial Advertiser: "Highly original and suggestive. . . . Philosophical breadth, judicial acumen, and a rare charm of literary style render the writings of M. Tarde both stimulating and fascinating."

The Thoughtless Thoughts of Carisabel

By ISA CARRINGTON CABELL. 12mo, $1.25 *net;* by mail, $1.27.

Some thirty genial satires on The New Man, The New Child, One's Relatives, Servants, Dinner Parties, Original Sin, etc.

The Times Saturday Review: "The discriminating ought to approve the book. . . . A delicacy of style and a happiness of expression that very few essayists of to-day possess. . . . Always in comedy and pathos there are the same tenderness and delicacy."

The Lightning Conductor

By C. N. AND A. M. WILLIAMSON. $1.50.

A Romance of Travel in Provence, Spain, and Italy, with a strong love interest, and two automobiles that are almost human.

The *Nation* praises it unqualifiedly in a long review, and the *Bookman* finds it among the "six best sellers."

The Holladay Case

By BURTON E. STEVENSON, author of "A Soldier of Virginia," etc. With frontispiece by ELIOT KEEN. $1.25.

The Tribune: "Prof. Dicey said: 'If you like a detective story, take care you read a good detective story.' This is a good detective story. . . . The reader will not want to put the book down until he has reached the last page. This is one of the most ingeniously constructed detective stories we have read in a long time, and it is well written into the bargain."

Henry Holt and Company

29 West Twenty-third Street, New York

Problems and Persons

By WILFRID WARD, Author of "The Life and Times of Cardinal Wiseman," &c. 8vo, $4.60 net.

"Mr. Wilfrid Ward has much of interest to tell in the form of personal memories. Here are sketches full of insight and sympathy, of Huxley, of Tennyson, of Newman and Manning, and others."—*Daily News*, London, Eng.

LONGMANS, GREEN, & CO., N. Y.

A Companion Work to Bryce's "Holy Roman Empire."

A History of Mediæval Political Theory.

By R. W. CARLYLE and A. J. CARLYLE, M.A.

In 3 Vols, Antique. Vol. I. **The Second Century to the Ninth.** *Now Ready.* 8vo, $3.50 *net.*

This volume deals with the elements out of which the more developed theory of the Middle Ages arose; the succeeding volumes will include the political theorists of the Sixteenth and early Seventeenth Centuries—to the time when the specific characteristics of modern political theory began to take shape.

G. P. PUTNAM'S SONS,

New York. London.

COMPLETE IN TWELVE VOLUMES

THE TEMPLE EDITION OF

The Works of Charles Lamb

Edited by WILLIAM MACDONALD. With Essays, Biographical Introductions, and Notes

This edition includes among its distinctive features (1) Appropriate daintiness of setting; (2) Profuse illustration, comprising some 500 drawings by modern artists, reproductions from the original engravings, and portraits; (3) Methodical grouping, careful editing, and, by the inclusion of much copyright and hitherto unpublished matter, general completeness.

"This is a form in which the lovers of Charles Lamb will be glad to have his works. It seems to be in almost every way a fitting embodiment of his spirit. The little volumes are extremely charming; easy to hold, easy to read, and with a certain elegant distinction of page, typography and paper."—*N. Y. Times Saturday Review.*

"This edition is in every detail of its appearance a delight to the eye."—*N. Y. Mail and Express.*

12 vols. long fcap. 8vo (4⅝ by 7¾), $16.00 *net* per set.
100 sets on large paper, numbered, $50.00 *net* per set.

E. P. DUTTON & COMPANY

31 West 23d Street, N. Y.

The Atlantic Monthly

FEATURES FOR 1904.

Emerson's Journal.

A series of contributions of extraordinary interest, drawn from hitherto unpublished private journals of Ralph Waldo Emerson, and edited by his son.

Modern Advertising.

Novel discussions, by experts, of several phases of contemporary advertising. The first paper, the Psychology of Advertising, is by Professor W. D. Scott. It is to be followed by The Abuses of Public Advertising, by Charles Mulford Robinson.

Brilliant Historical Studies

from scholars who have had access to fresh sources of information. Two papers by Andrew D. White on Fra Paolo Sarpi, the famous controversialist; two by Frederick J. Turner, on Diplomatic Intrigue for the Mississippi Valley; one by Rollo Ogden, on Prescott the Man, etc.

Literary Criticism

by writers of recognized competence is a feature of the Atlantic. In 1904 Mr. Royal Cortissoz, of the New York *Tribune*, will write regular reviews of publications in the field of art.

A Serial Novel by Robert Herrick

entitled THE COMMON LOT. The strongest and best sustained imaginative work of this notable writer. Its scene is laid in Chicago.

Colonel T. W. Higginson,

whose Cheerful Yesterdays were among the most readable reminiscent papers ever printed, has written for the Atlantic six new articles in the same vein, under the title, PART OF A MAN'S LIFE.

The Ethics of Business.

A group of trenchant inquiries into the right and wrong of present business methods. The first article Is Commercialism in Disgrace? has been written by John Graham Brooks.

The Short Stories for 1904

will touch many fresh fields and unhackneyed themes. Especial attention is called to a delightful group of **Humorous Stories** by several writers new to the Atlantic.

Among the story writers represented in early numbers are Will Payne, Alice Brown, Charles Miner Thompson, S. Carleton, Elia W. Peattie and Norman Duncan.

SPECIAL OFFER TO NEW SUBSCRIBERS.

In order to introduce the ATLANTIC to new readers, the publishers will mail, upon receipt of $4.00, to any person not at present a subscriber to the publication, the three issues for October, November and December, 1903, and the magazine for the entire year of 1904.

HOUGHTON, MIFFLIN & CO., 4 Park Street, Boston.

EGYPT EXPLORATION FUND

Established in London in 1882

The Committee for the United States solicit subscriptions for the work of the present season, which will be conducted, as heretofore, under the personal direction of Professor W. M. FLINDERS PETRIE. Explorations are to be made in the pyramid field of Sakkara and at other neighboring sites. Every annual subscriber of five dollars or more will receive the Memoir of the Fund for the year, an illustrated quarto volume, describing the results of the year's work.

Græco-Roman Branch:—In this branch of the Fund Messrs. Grenfell and Flunt's remarkable discoveries of papyri have been made at Oxyrhynchus and in the Fayûm. It is highly important that this work should be continued, because of its great value to students of the Bible, the Greek and Roman classics, and life in ancient Egypt. Annual subscribers of five dollars or more to this branch of the Fund will receive Grenfell and Flunt's volume on the Papyri, instead of the Memoir mentioned above, if they specify that their subscription is for the Græco-Roman branch.

Archæological Survey of Egypt:—This branch of the Fund, under the direction of Mr. N. de G. Davies, is devoted to the copying of inscriptions and sculptures, from the monuments of Egypt. Annual subscribers of five dollars or more will receive an illustrated quarto volume describing the year's work in this branch, if they specify that their subscriptions are for the Archæological Survey.

For the Committee,
WILLIAM W. GOODWIN, Chairman.

Subscriptions should be addressed to the Secretary, J. Ellerton Lodge, 8 Beacon St., Boston, Mass

HOUGHTON, MIFFLIN & CO., Publishers

POEMS of TENNYSON Chosen and Edited

WITH AN INTRODUCTION

By HENRY VAN DYKE

The work of the most popular of English poets is here arranged and edited by one of his most distinguished students. Dr. Van Dyke's introduction is most comprehensive and comprises one quarter of the book. It includes the following chapters:

I. Tennyson's Place in the Nineteenth Century.
II. An Outline of Tennyson's Life.
III. Tennyson's Uses of His Sources.
IV. Tennyson's Revisions of His Text.
V. The Classification of Tennyson's Poems.
VI. The Qualities of Tennyson's Poetry.

The book has been made by the *Merrymount Press* in special anticipation of the holiday sale, and is unusual in its attractiveness. The photogravure illustrations, which are also Dr. Van Dyke's selection, are from sources not easily available, and some of them have been hitherto unpublished. It is the intention of the editor and publishers to make this volume the most inviting form in which the poet has been offered to the general reader.

12mo. Cloth. With cover design in full gold. 562 pages. $1.50 net.

This is said of

The STORY of A SOLDIER'S LIFE

By Field Marshal VISCOUNT WOLSELEY

Two volumes, with portraits and plans. Price, $8.00 net.

Some of the Events in the Career of Lord Wolseley

The Burmese War of 1852-3
The Crimean War
The Great Mutiny and the Relief of Lucknow
The Oudh Campaign under Sir Hope Grant
The Chinese War of 1860
Sir Hope Grant's Expedition to Japan
The Mission to the Tai-Ping Rebels in China
The Expedition to Canada to watch the American War
The Visit to the Southern Confederacy
Fenian Campaigns to Niagara and the Welland Canal
The Riel Rebellion
The Reformation of the War Office, London
The Ashantee War

THIS soldier's life story, told by himself, is not only a work of much historic value, but a stirring tale as well—a piece of martial autobiography of very genuine interest. It is the sort of book, in a word, that interests a man because he is a man, wholly apart from whether he is also a student or a lover of history.

Lord Wolseley was Field Marshal because he was first a soldier and won his promotions by fighting for them. Once, during the Great Mutiny, wearied in battle, he slept soundly over night among the dead in the field. It was he who led the advance in Colin Campbell's relief of Lucknow. It was he who stormed the Toka forts in the Chinese war of 1860. He put down the Riel Rebellion after a march of 800 miles through the Canadian wilderness. He conducted the Ashantee war.

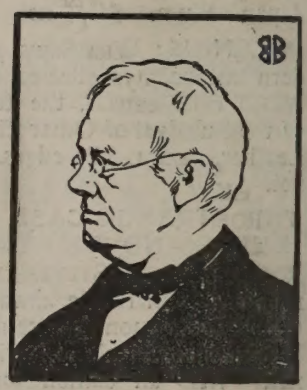
Third Edition - - - - - - *DECEMBER 15*



Senator HOAR'S AUTOBIOGRAPHY of SEVENTY YEARS

"Indeed, so packed is it with memorable things that the reviewer, selecting here and there a chapter or a passage for special notice, feels like one gathering pebbles on the seashore."
—*The Dial.*

"A book which, considered as a contribution to the materials of American history, will rank with Benton's 'Thirty Years in the U. S. Senate,' and Blaine's 'Twenty Years in Congress,' is the 'Autobiography of Seventy Years,' by George F. Hoar. From one point of view the narrative is decidedly superior to either of the works with which we have compared it. The author is not only a statesman but also a scholar and a man of letters. It may be doubted whether any citizen who has played for an equal length of time an important part in American politics has possessed in an equal measure the gifts and the attainments that make an accomplished writer."—*New York Sun.*

"Senator Hoar's sense of humor is keen and his book is illuminated constantly with flashes of fun that relieve its more solid qualities. It is a dignified, optimistic, entertaining and inspiring record of a long and useful life."—*Chicago Record-Herald.*

An Alluring Achievement

SAPPHO: One Hundred Lyrics
From PAGE'S LIST
By BLISS CARMAN

With an Introduction by CHARLES G. D. ROBERTS

(Just published)

A contribution to poetic literature of unusual interest, and, perhaps, the most alluring venture in the whole field of recent poetry, is that which Mr. Carman has undertaken in giving us, in English verse, those lost poems of Sappho of which fragments have survived. A task of imaginative and, at the same time, interpretative construction.

The volume is produced in sumptuous form, designed and printed by the De Vinne Press, from special type which is afterward distributed. No pains have been spared to make this one of the most beautiful books of the year, and the editions are strictly limited as follows:

LIMITED EDITION
500 Numbered Copies on Cheltenham D. E. Paper, at . . . $ 6.00 *net*

DE LUXE EDITION
200 Numbered Copies on English Hand-Made Paper, at . . . 10.00 *net*

AUTOGRAPH EDITION
50 Signed and Numbered Copies on Imperial Japanese Vellum, at . 15.00 *net*

Published by **THE MACMILLAN COMPANY** 66 Fifth Avenue New York

The Nation.

NEW YORK, THURSDAY, DECEMBER 17, 1903.

The Week.

Whether it be mere Yankee curiosity that inspires Senator Hoar's Panama questions, or some deeper purpose of statesmanship, they are awkward enough for the President. To have the most eminent Republican Senator, the chairman of the Judiciary Committee, put such searching queries to him, is certainly to disturb a dream of universal acquiescence in a policy of rush and recklessness. Mr. Hoar, it is true, with that talent for gentle malice which is all his own, declares that he has no thought of embarrassing Mr. Roosevelt. The President is fairly aching to make a clean breast of everything, and Senator Hoar merely wishes to aid him by asking a few leading questions. It must be known at the White House, for example, when and where Panama adopted a constitution and authorized a canal treaty; and Mr. Hoar is innocently confident that the President will soon tell us all about it. The other questions in Senator Hoar's resolution look ugly, but he assures us that they are all harmless, and will be perfectly agreeable to the President. Mr. Roosevelt will be pleased, accordingly, to report to the Senate just what pecuniary interest in the canal Bunau-Varilla and the other "negotiators" had, with all the other tell-tale information sought by the inquisitive Massachusetts Senator. It is all friendly in the last degree, of course, and merely to make talk.

Minister Bunau-Varilla tells Acting Secretary Loomis that delays, and particularly delay to confirm the new canal treaty by the Senate, would "tend to affect the imagination." Evidently, the bantling Republic of Panama is "like a dream within a dream." It is a figment of the imagination, and unless it is quickly "fixed" upon the map of the world, it may fade like a snapshot proof too long exposed to direct sunlight. But the further consideration arises, Whose imagination may be dangerously affected? Clearly not M. Bunau-Varilla's, nor yet the President's. Those are permanencies upon which we may reasonably count. Quite as certainly the Colombians are exempt from the perils of vain imaginings. They face stern realities. The really vulnerable imaginations are, it seems, American and Panamanian. We may awake to the intolerable shabbiness of the "Yankee trick" Mr. Roosevelt has perpetrated to our discredit; they may too soon realize the possibilities of piling revolt upon revolt. With their Spanish-American genius for swift and secret organization, which Mr. Hay so much admires, they may have plans for securing a smaller division for our millions than the population of Panama. For this and other reasons, M. Bunau-Varilla dreads the continued working of the imagination upon the Panama proposition. He does well to dread it.

Like the Delphic oracle, the new Department of Commerce and Labor has written over its portal, "Know thyself." Its first annual report shows that its principal occupation at present is finding out why it exists. The impression which the report most distinctly makes on the mind of the reader is that the Secretary and his new staff are trying to discover something to do. Since its organization last February, the Department's time appears to have been chiefly spent in answering the perplexing questions, Whence come I, why am I here, whither go I? Of accomplished results the report shows a signal lack, though, of course, considering the purposes for which the Department was created and the short time it has been in operation, this is in a measure excusable. Most that Secretary Cortelyou says is along the line of what he hopes to do; but, as preliminary to an exact knowledge on this score, he has apparently been putting himself and his staff through what looks like a post-graduate university course. His curriculum covers nine studies, including the law creating the Bureau of Corporations, the general subject of interstate commerce, the decisions of the Federal courts on the same, the powers of the Interstate Commerce Commission, the decisions of the Federal courts on trade conspiracies, monopolies, and combinations in restraint of trade, the corporation laws of the various States, taxation methods in the different States, the effect of Trusts and tariff upon prices, and the power of the Federal Government in the matter of insurance companies. Incidentally, the Secretary tells us that everybody will be treated fairly.

All this is excellent, but to what does it lead? There is nothing in Secretary Cortelyou's report to show that the efficiency of the various bureaus incorporated into the new Department of Commerce and Labor has been increased by the creation of a new Cabinet portfolio. Theoretically, there was something to be said for the change—the lessening of the work of some of the other Cabinet officers, for instance. But that there was any real reason for the new arrangement was a matter for experience to demonstrate, and nothing in the present report indicates that any headway has been made in this direction. The most that can be affirmed is, that Secretary Cortelyou hopes that he may see a way to be of use to the industrial interests of the country, including, as he is careful to intimate, both capital and labor. Meanwhile, he says, regarding his studies in connection with the Bureau of Corporations, that in order that the information gained may be utilized to the best advantage, "a liberal addition to the present appropriation should be granted." Without intending to reflect in the least on the purpose and methods of the new department, it may be asked if its creation and its course so far in any measure mark the growth of the bureaucratic spirit in the United States. Is there any indication here of an increasing tendency to substitute means for ends, and to establish public departments for other than strictly public interests?

We dare say that many people who read in last week's Shipbuilding testimony of the $1,000,000 common stock paid Mr. Max Pam "for services to Mr. Schwab and for promotion of the company" gasped a little at the free-handed ways of the incorporators. But the liberality of those palmy days must be judged in the light of subsequent events. The Shipbuilding stock was really a sort of Confederate currency—not worth considering unless delivered in bulk; or, perhaps, it more closely resembles John Law's bank notes, of which, as St. Simon relates, the Regent used to insist on new issues every week, so that he could distribute a few millions to favored callers at his levées. There are ways of figuring out the intrinsic value of Mr. Pam's million-dollar "bonus," The $2,500,000 "Shipbuilding preferred" and $2,500,000 common, paid as a bonus to the Morgans in the Bethlehem Steel deal, were sold, the firm has subsequently stated, for $75,000. This was an average market valuation of 1½ per cent. Mr. Pam got only common stock, which was supposedly worth less than the preferred. But, taking the average price obtained for the Morgan stock, Mr. Pam's bonus—if it could sell the stock at all—was worth exactly $15,000. This is not high, as "promotion services" have been rated lately. We are surprised, on the whole, at the moderation of the promoters in not demanding bonds. The original "memorandum" of "promotion expenses" for the Shipyard Trust reserved for that purpose 17 per cent. of the company's total stock and 9 per cent. of its first-mortgage bonds. Why this discrimination? A million-dollar share certificate might serve for a tip to an obliging head-waiter, but to offer it to a capitalist strikes us as insulting.

In imposing a fine of $1,000 on a Press Feeders' Union, Judge Holdom of Chicago has given workingmen's organizations one more sharp reminder that responsibility must go with power. By one means or another, society has certainly got to find a way to make labor unions amenable to the law for wilful damage. It may come about by legal incorporation. The result may be reached by suits against individuals. Offending unions may be made, under existing law, to pay the penalty of their misdeeds after the fashion of this instance of Chicago justice. But in some way the end must be attained. We cannot tolerate the possession of such power without liability. Even if society were to be conceived of as nothing but organized warfare, the defeated would have to pay the cost of the struggle, or else abandon hope of gain if victorious. And in a peaceful industrial régime like the present, such disturbers of traffic and of order as too many labor organizations have shown themselves to be, cannot much longer be permitted to go undisturbed. If they are to be allowed to dictate to their own members, they must be made answerable to the public.

After more than a century and a quarter of use, the "Cradle of Liberty" still rocks in Boston. The country at large cannot be too thankful for this, for once more has a great opportunity been presented to the sons of New England to battle for freedom. The tyrant's hand, so it is alleged, is stretched out over the Boston Symphony Orchestra; rumor has it that the Musical Mutual Protective Union is going to order twenty or more of its members to leave that body. Other great orchestras have allowed themselves to be bound in chains by the unions, but the resolute character of Major Higginson, to whose generosity and indefatigability Boston owes its splendid band, has heretofore inspired wholesome awe. He has simply said that if he was interfered with, he would disband his orchestra. Will he do so? Of course, the discontinuance of its symphony orchestra would be a terrible blow to Boston—one of its most distinctive features would be gone. But Boston has before now allowed the grass to grow in its streets for a great principle; in the eighteenth century its women went without their tea for liberty's sake, and it is to be hoped that in the twentieth they will as gladly sacrifice their Friday matinées. Seriously, Major Higginson will have, if current reports are true, a fine opportunity to advance the cause of liberty. Such action as the Musical Protective Union is said to contemplate would be carrying union tyranny to the very pitch of the absurd.

Philadelphia is not to be congratulated on the President's decision to retain Postmaster McMichael. Although a Quay man, it was expected that McMichael would make an excellent head for the post-office. As a matter of fact, there have been so many violations of the spirit and the language of the civil-service rules as to convince the Civil Service Commission and the local Civil Service Reform Association that the interests of the service demand a change. Yet on the charges laid before him the President has decided that there is no ground for him to take any adverse action. While that may be true in the particular matters under consideration, the President should know that a new head is most desirable. But Mr. Roosevelt has no desire to offend Quay on the eve of the national convention, even though his inexcusable appointment of Quay's son as deputy naval officer might be thought sufficient tribute to the boss for the present. The truth is, that our large post-offices will never be as efficient as they ought to be so long as their heads are selected by political favoritism. As the postal service in our great cities becomes greater and more complex, it will gradually be realized that the chief offices cannot be properly administered by men of no previous experience in the service. These positions should be held out as prizes to deserving men who wish to give their lives to the postal branch of the Government.

Carl Schurz, addressing the National Civil Service Reform League at Baltimore, said: "You will be struck with the fact that of all the public servants who were, in consequence of [the postal] investigation, indicted for fraud or other malfeasance, not one had come into the service by regular competitive examination." Of course, an inference based only upon these particular exposures would be open to question, but Mr. Schurz, speaking from many years' active observation of the public service, did not hesitate to declare that all Federal offices, whenever it is constitutionally possible, should be filled by competitive examination. He has found that the exceptions made in the case of confidential and fiduciary appointments are almost always abused for political purposes. These very postal swindlers were one and all appointed without examination, because competition was alleged to be too crude a means of ascertaining special moral and personal qualifications. Mr. Schurz, it may be assumed, does not advocate examination as a universal panacea; he does, however, unqualifiedly advocate it as the only practical barrier between rapacious and incompetent bosses and an efficient public service. His words should give courage to all who are engaged in the good fight.

When such avowed enemies as the National Wool Growers' Association and the National Association of Wool Manufacturers sit down to a love feast it is time for the American people to take to the woods. After years of wrangling over the spoils from the tariff, these two organizations met in Washington on Thursday to consider proposed reciprocity treaties between this country and France and Argentina. Both agreed to antagonize these treaties, on the ground that they are hurtful to our wool interests. Some day, no doubt, the manufacturers will demand a *quid pro quo* for this tender consideration for the growers, as their own interests, of course, naturally impel them in the direction of a ratification of these reciprocity measures. As the manufacturers have been in the habit of getting the best end of the tariff bargain in the past, it is perhaps safe to assume that they have designs on the public which will make this concession to the growers a profitable transaction. Was Secretary Shaw consulted before the Washington meeting? His eagerness for steamship lines to South America is well known. Why would not enlarged wool imports from Argentina be an excellent way to help along the good work? What is really needed to make steamships to South America pay is return cargoes.

The pith of Mr. John Charlton's speech on Thursday night before the Boston Chamber of Commerce was that freer trade with Canada must be soon sought or postponed indefinitely. On one hand, extreme protectionist feeling is growing in the Dominion; on the other, the advocates of imperial reciprocity are making the erection of a Chinese wall against us a test of British loyalty. Patriotism and selfishness in frank alliance threaten to make a combination with which it will be impossible for any foreign nation, especially for ourselves, to deal. All these considerations remind us that good reciprocal arrangements with Canada may soon hardly be had for the asking. The political situation, too, may at any time become unfavorable for reasonable tariff negotiations. Sir Wilfrid Laurier has consistently held the doctrine of a moderate protective tariff, and has looked favorably upon all reciprocity treaties. He would welcome overtures from Washington looking to a freer exchange of Canadian foodstuffs and raw materials for our manufactures. But it is by no means certain that Sir Wilfrid, or his party even, will long be in a position to negotiate treaties. The resignation of Minister Tarte has undoubtedly alienated many violent protectionists, and the failure of the Grand Trunk Railway to close the contract for a transcontinental extension leaves the Government's pet scheme sadly discredited. If the Liberals should lose the coming election, we should find intractable and probably unfriendly influences in

control at Ottawa—and the hope of reciprocity postponed to the Greek Kalends.

The somewhat ostentatious resignation of a United States official in Alabama last week, on account of the President's incendiary views on the rights of the negro, raises the question whether the South really wants good Federal appointments. Whatever else Mr. Roosevelt may have done, he has named Government officers in the Southern States of a much higher grade than was ever insisted upon by a Republican President before. This is frankly acknowledged by the more candid newspapers of that section. Thus, we find the Montgomery *Evening Times* declaring: "It is not too much to admit that no President since the war has in so large a measure seemed to cast aside his own political interests in order to serve his conception of the needs of the civil service in the South." This is high commendation, but the *Times* backs it up with many specifications. Democratic newspaper though it is, it thinks it only justice to recognize what Mr. Roosevelt has done in this matter of securing "decent and clean officials in the South"; all the more so because it perceives that his "independent and fearless course" would lose him Southern delegates should Hanna contest the nomination with him.

The action of the Union League Club, on Thursday, calling upon the Administration and Congress to take measures to secure to negroes in the South their political rights, is only one sign more of the coming to the front of an issue that cannot be evaded. It is a national concern. It would be so even if the wrongs of the negro did not directly affect any except residents of the Southern States. Unequal enforcement of the law anywhere in our country cannot but be of the deepest interest to all parts of it. No one knows when or where the law-defying spirit may spread. In the presence of so gross and admitted a violation of justice, the conscience of no American should be allowed to sleep. But, of course, the suppression of the qualified negro vote in the South most intimately affects the North. It establishes a glaring inequity of representation in that common legislature where there should be equality. That is the great reason why an appeal lies directly to the House of Representatives. Its own fairness as a representative body is imperilled by the exclusion from the suffrage, in one section, of thousands who are entitled, even under the local laws of the State, to vote. Under such circumstances, the Union League Club would have been false to its history had it not made its voice heard in behalf of justice to the negro.

Gov. Pennypacker has provided another surprise for the unfortunate State of Pennsylvania, over which he presides. It has only recently stopped laughing at his ridiculous fiasco with his press-muzzling law, wich is daily violated and has never been enforced. But the newspapers are now concerned with a much more serious matter. In a letter to the editor of the Philadelphia *Ledger* Gov. Pennypacker last week declared that he not only had the ambition but the purpose to become a justice of the Supreme Court. There will be a vacancy next year, and he announced his willingness to accept the nomination if tendered, thus giving up two years of his Governorship in order to become a justice for twenty-one years. Now, there is no dissent from Gov. Pennypacker's fitness for this position. Indeed, it is the universal judgment that he should not have left the bench to become Governor. As Quay and his gang are also of this opinion, Gov. Pennypacker's declaration that he is willing to be "promoted" to the Supreme Court means that the deal will be consummated. But this in turn entails the promotion of Lieut.-Gov. William M. Brown, the worst kind of machine politician, and an avowed tool of Quay. Naturally, the independent press is aghast at the prospect. Even the *Ledger*, which has been very friendly to the Governor, tells him he has made a grave mistake, and that he must reconsider; while the *Record* calls it a "foul conspiracy.'

The Lieutenant-Governor is familiarly known as "Oleo" Brown because of his opposition to a bill to regulate the sale of oleomargarine passed while he was a State Senator. This won for him the hostility of the farmers to such an extent that Senator Quay offered him his "expenses" if he would withdraw on the eve of the convention held last year. But Brown declined, it being even then rumored, although denied by Pennypacker himself, that the Governor would not serve out his term. In the long fight of 1899 to defeat the reëlection of Senator Quay, Brown was chairman of the steering committee which looked after Quay's interests in the Legislature. But his greatest achievement was a speech in support of the McCarren bill to prevent district attorneys from peremptory challenge of jurors in criminal trials. The anti-Quay "insurgents" charged that the bill was being rushed through in the interest of the Senator, who was then under indictment in Philadelphia for using the funds of the State.

The slate forced upon the caucus of Republican district leaders on Saturday by Gov. Odell reveals clearly just what kind of "reorganization" the Republican party of this city has undergone. After weeks of discussion and of endless meetings and conferences in secret, the new boss announced the names of the men who are to "redeem" New York city from Democratic domination. But instead of the looked-for improvement in the quality of the County Committee officials, we have, if anything, a deterioration. In selecting Charles H. Murray for the chairmanship, and Armitage Mathews for the secretaryship, Gov. Odell has served notice that any rumors of a desire on his part to reform the organization were wholly unfounded. The party has received and acclaimed a new boss, but in his essential characteristics his name might as well be Platt. The "Old Man" himself could hardly have selected men less fitted for their positions or more likely to disgust the decent Republicans without whose cordial support the party can make no headway. In the White House the names of Odell's "reformers" must produce something like a chill.

When the Imperial War Minister finds it necessary to enter into a long defence of the German army, in the Reichstag, it may properly be assumed that army conditions are very unsatisfactory. Indeed, the cable on Friday brought to the *Staats-Zeitung* reports of three more officers who have been punished for gross brutalities to subordinates. Almost every day similar cases have been reported for weeks past, while the scandal produced by Lieut. Bilse's book, 'In a Little Garrison,' to which Gen. von Einem referred, has by no means abated. The War Minister endeavored to minimize the importance of Lieut. Bilse's book, but it is reported that all the officers except three of his battalion have been cashiered or transferred. The day before the General's speech, one who figured in the book as "Müller" was dismissed in disgrace, and the author's sentence of six months, coupled with dismissal, would seem to indicate that, truth or no truth, his volume is taken seriously. The book, be it noted, having been forbidden and confiscated in Germany, is now enjoying a large sale in Austria. Even in the Bavarian Diet a unanimous resolution calling for the dismissal of all officers and non-commissioned officers convicted of maltreatment of subordinates passed the lower house. But the authorities are still only half-hearted in their attempts to stop the evils that have crept into the army, or Gen. von Einem would not have tried to excuse brutalities by speaking of the "bad privates being largely responsible" for them. The Bavarian Gen. von Fries, an excellent officer, came nearer the truth when he said that the ridiculous sentences for inhuman conduct imposed by military courts were at the bottom of the trouble. How, again, is it possible that one sergeant could have committed 1,200 offences before being found out? One officer in 400, and one sergeant in every 120, were tried for abuse of authority in the year ending in June last.

THE PRESIDENT'S POSITION.

Republican questionings about the wisdom of renominating President Roosevelt have now passed from whispers to audible voices. The meeting of the National Committee on Friday last gave rise to an amount of frank talk in the open which, taken in connection with the secret intrigue against the President that is undoubtedly going on more briskly than ever, invites a review of the whole situation. "Is Roosevelt as Big as We Think Him?" is the quizzical caption of one of the latest articles in the Hanna-Heath organ in Cincinnati, which is daily moving for reconsideration. With no thought of attempting at this time to weigh our Hannibal, we may yet point out impartially the elements of weakness and of strength in the President's position as it presents itself to-day.

He is personally little liked by the most influential Republicans in Washington. That is an incontestable fact. It is not simply that he has been the most unconventional of beings in the White House. Doubtless he has trodden on many gouty Senatorial toes; but that is not the whole of it. Old conventions might easily be sacrificed if new wisdom and efficiency were put in their place. There, however, intrudes the doubt. Too many men have found President Roosevelt what they can only call "bumptious." It is not merely that he is a reckless talker—he is an irrepressible talker; he overflows on all subjects, having a particular fondness for instructing specialists in their own branches. Men of weight and experience in affairs are not pleased with this. They can endure exhortation on Sunday from the pulpit, but do not take to the insistent sermonizing of the President. The air of knowing it all does not sit well on a man whose impetuous volubility sometimes leads him into displays of ignorance. "That job is too big for him," was the verdict of a business man who had gone to the White House on an important errand, and was disappointed with the President's flighty and jocular way of dealing with it.

This is, of course, largely personal manner, though there is a certain mental quality behind it. But manners maketh President, too, in a certain sense. It is not wholly offended dignity that leads so many Republican Senators to speak bitterly of the President in private. The lack of poise and deliberation of which they complain, undoubtedly denotes a defect in Mr. Roosevelt's mental make-up. We have seen it strikingly illustrated in his headlong course in Panama. He and his friends seem surprised that his inconsiderate action there should have given such a shock to the conservative element of his own party. It was only a petty affair, not the slightest loss or risk of war was involved; so why all this alarm? Because, though the President may not see it, men judge character by samples. A rash leap over treaty and precedent in the case of Panama is a fair indication, they say, that a similar mad plunge, with far more dangerous consequences, may be made at any moment in some other foreign question. That is why there is so much talk of Roosevelt's being certain to get us into war if reelected; and why a new distrust of the man has grown up, within the past few weeks, among many whose natural inclination was to support so honest and fair-dealing an Executive. Only a prudent conduct of foreign affairs could have stilled old doubts of Mr. Roosevelt, and won him votes that may easily prove critical. The course he has elected has unquestionably alienated them.

All these considerations, and others that might be adduced, make it probable that, if Mr. Roosevelt were not President, he would not be nominated for the Presidency by his party. In their present temper towards him, the managers would be seeking another candidate. They would try to get one, in the first place, more to their own mind and, besides, easier to hold up before the country as a "safe" President. But the case is radically altered by Mr. Roosevelt's being already in office. To endorse him, as the party must, yet to refuse to renominate him, would be almost suicidal. Particularly would it be so to set him aside on account of the enmity of large financial interests. Saying nothing now of the merits of the suit brought against the Northern Securities Company, its effect politically is beyond dispute. It gave Mr. Roosevelt tremendous popularity in those Western and Northwestern States where a Republican victory is to be won if at all. In addition, the President's absolute personal honesty, his courage, his independence, his many manly qualities, must be taken into the reckoning. Hence, if Senator Hanna were now to intrigue the nomination away from him, indignation would know no bounds, and a Democratic triumph would be assured. All this is perfectly well known to the Republican magnates; consequently we expect to see them, with much ill will and with wry faces and many misgivings, submit to the inevitable and renominate the President.

What will then follow, let rash prophets say. We predict nothing except that a continuance of business depression would make the election of any Republican candidate highly improbable. It would be but poetic justice to have the Republican party turned out for not preventing hard times. That would be only commending its own chalice to its lips. Sensible men would find much to comfort them, amid incidental evils, in the spectacle of a party that boasts of "standing pat" falling flat.

THE VIRTUOUS MR. HEATH.

"Certainly it is nothing for me to worry over," said Perry S. Heath in Chicago the other day. "I believe in letting the other fellow do the worrying whenever possible. Why should I resign from my office on the Republican National Committee?" Mr. Heath is quite right in assuming that the other fellow has cause for worry, if by "the other fellow" he means President Roosevelt. In view of his connection with the postal frauds the President cannot but pray most heartily for his speedy retirement to private life. Senator Hanna, on the other hand, sticks by his friend as an embodiment of the Senator's ideals in politics and public administration. Heath also "stands pat"; he virtually quotes the words of an old English divine: "I am so hardened in goodness as I fear neither post nor pillory." Mr. Heath's shining virtues have often attracted admiring attention, and it would be a pleasure to consider his career as a whole. The immediate topic, however, is his prominence in the Bristow report. Few people have read that document through; still fewer have put together the scattered references to the Secretary of the Republican National Committee. When they are gathered into a coherent body, everybody can see at once why President Roosevelt objects to Heath and why Senator Hanna does not.

The President, in his own memorandum, says: "The following is a list of the fourteen post-office employees in the service at the time this investigation was begun who are apparently most seriously implicated in the wrongdoing, together with an account of the steps that have been taken by the Government in each case, and a statement of the date of original appointment of each man in the service." Then the President introduces the list of the fourteen men under indictment with a bracketed note: "The case of ex-First Assistant Postmaster-General Heath, who had left the service over three years before this investigation was begun, is set forth in the report of Mr. Bristow." The President thus classes Heath with the fourteen chief rascals, explains why he is not under indictment, and calls attention to Mr. Bristow's detailed account of his villanies.

Mr. Heath first comes in on page 12 of Mr. Bristow's brief. When the "Montague Indicator" Company was organized, George W. Beavers, who is now lying under eight indictments, kindly offered a word to the wise—that distribution of stock among the Department officials would help the business. Beavers received 2,000 shares, held under the name of D. S. Richardson; and when he received the first dividend of $120 he replied somewhat mysteriously to Mr. Richardson: "Yours of February

6, 1901, with enclosure, duly received. I will hold the papers in your name for the present until something decisive is known. I am glad to know that the matter promises so well. I have not seen Mr. Heath, but will make another effort to-day." In August, 1902, Beavers again wrote: "Our friend in Salt Lake wants the enclosed stock drawn in the name of Edwin B. Bacon. Kindly issue new certificates and have these destroyed. Forward same to me by registered mail." Across the face of this letter R. H. E. Espey, secretary of the Indicator Company, had written in pencil, "Editor Salt Lake *Tribune*," and on the back, "133 S. West Temple" and "9th E. and Brigham." Heath was editor of the *Tribune;* the first address was that of his office, the second that of his house. The "enclosed stock" was 1,000 Indicator shares. Edwin B. Bacon of Louisville, Ky., is Heath's uncle by marriage, and is said to be an intimate friend. The 1,000 shares were returned to the company anonymously in a blank envelope after the investigation began.

Heath next turns up in connection with the Brandt Automatic Cashier. In February, 1899, the Washington agent wrote to Brandt: "I am satisfied that we have the assurance and friendship of both parties—General Heath and Mr. Beavers—and all that is necesary is to cultivate that friendship, if not by kind words, by dollars and cents, and I think the latter will be the most positive." With Heath kind words may have been more than coronets, but they certainly were not more than dollars; for in May, 1899, he gave an order for 250 machines at $150 each. All in all, 527 machines were purchased, and 217 of them shipped to postmasters without requisition. Of the whole number purchased, 173 are idle; many have never been unpacked. The company received $74,275. Evidently Heath's friendship was worth cultivating. Mr. Bristow's sound conclusion is that, eliminating the question of fraud, the transaction would have justified the removal of Heath; but Mr. Bristow adds, "The element of fraud cannot be eliminated."

Heath also looked compassionately upon Bundy Time Recorders, and in 1898 required post-office clerks to use them. The machines were bought in the most reckless fashion, at $100 apiece, and 50 cents extra for each key. Los Angeles, with ninety-three carriers and eighty-seven clerks, was supplied with thirteen clocks and 840 keys; and so throughout the country. Then Heath suggested to the Barry Cancelling Machine people that M. D. Helm be employed as an agent. The contract with the company was renewed, and the price of the machine raised from $150 to $175 and then $200. When Heath retired, the price dropped again to $150. Heath also favored the Hampden Cancelling Machine, and bought a hundred at $300, each, though he knew they were worthless. There is considerable evidence, direct and circumstantial, that he received $20,000 of the stock in the Doremus Cancelling Machine Company in consideration of an order for not less than 300 machines; and it was also understood that Beavers shared with Heath the $25 paid him for each machine ordered.

In the face of these facts no one can doubt the guilt of Heath. He himself cannot deny that these frauds flourished chiefly among his subordinates. An accurate description of conditions under Heath's management, though hardly "a libel on hell," as Col. Watterson might say, would be the grossest kind of libel on any administration that made a pretence to efficiency or honesty. Should the Republican Committee keep Heath in office, the country can do nothing but accept the act as a notification from Hanna that he purposes to discredit the postal investigations, to defy the advocates of decency, and to defeat Roosevelt by indirection.

THE RIGHT USE OF PRECEDENT.

President Pierce, in his message of May 15, 1856, laid down the American doctrine of recognition. It particularly applied to the status of Central American countries. A revolution had but recently occurred in Nicaragua, and it was a question which of two rival Ministers should be received by the United States. Announcing his decision to Congress, Mr. Pierce said that it was our "established policy" to "recognize all governments without question of their source or organization, or of the means by which the governing persons attain their power, provided there be a government de facto accepted by the people of the country." So far, that reads like good Roosevelt gospel as preached to the heathen of Panama. But President Pierce added some qualifying words which put an entirely new face on the matter—"with reserve only of *time* as to the recognition of *revolutionary governments* arising out of the subdivision of parent States with which we are in relations of *amity*."

There could not well be a clearer condemnation in advance of President Roosevelt's Panama policy. It is not necessary to draw out the details. They speak for themselves. Judged by the standards of fifty years ago, Mr. Roosevelt's recognition of the fictitious republic of Panama was neither timely nor friendly. He "lost no time," said Congressman Hitt on Friday. Yes, but in not taking time, he lost character. But what we wish to dwell upon just now is the larger question of what a statesman's attitude should be towards precedent. If some affect a doubt whether there is such a thing in diplomacy, or in international law, as *stare decisis*, on the other hand, what is to become of our boasted "continuity in foreign policy," and "party differences ceasing at the water's edge," unless President follows President, adding to the body of Executive precedent, from time to time, but taking away no jot?

There are natures, of course, to which precedent is only a plague. To look through the opinions of a lot of "dead men" is, to such an order of mind, a beastly nuisance. We do not say that President Roosevelt is of this type, though it is evident that he was badly advised as to the law of his Panama venture. A more patient reading of our history would have saved him from the sarcastic congratulations of the Daughters of the Confederacy, and of veterans of Lee's army, on having had his eyes opened at last to the true doctrine of secession. It is not a little awkward, too, that he should be confronted now with pronouncements by Grant, Cleveland, and McKinley, which he had apparently overlooked entirely. It must be admitted that recognition on the trigger is apt to have its troublesome sequelæ of this kind. Freedom has *slowly* to broaden down from precedent to precedent.

The impetuous man in great office turns, of course, to another set of maxims. Ancient good becomes uncouth with time. New occasions teach new duties. Old paths, old pitfalls. If you cannot find a precedent, make one. Practical results weigh more than fine-spun theories. We all know the things that are said. Sanctity of precedent is not unlike the sanctity of creed subscription. Some men are born to take a serious view of it, some a light. Dean Gaisford was one of the latter. When an All Souls Fellow came to him with a scruple about the oath to keep residence, the Dean jovially commanded him to disregard all that: "If you kept your oath, we should have forty well-connected young gentlemen with nothing to do wandering loose about the University, and, good gad, what a nuisance you would be!"

In this conflict of the loose with the strict interpreters, where shall the public man find a practical guide? How is he to escape making precedent on the one hand an iron cage, on the other a staircase of sand? It seems to us that the analogy of a judge applying old principles of law to new cases is in point. He goes to his treasure-house of legal precedent to look for aid in doing justice. Desiring to establish the right and to maintain equity, he seeks some maxim or authority of the past which will enable him to make the righteous cause triumphant in the present. Similarly, the statesman should take his stand upon precedent, not for the purpose of denying progress or making advance impossible, but in order to derive from ancient principle fresh rules of honorable

action in modern emergencies. To twist an old rule or torture a treaty into warrant for selfish advantage or wrong of another is to abuse precedent. Rightly to use it is to make it yield authority for fair dealing, for widening the bounds of freedom, for doing essential justice as between man and man and nation and nation. And such must be the procedure of any President who seeks in the former utterances of statesmen a light by which to guide his feet in untrodden paths. He may know that he is making the correct use of the wisdom of an elder day when he allows it to lead him and his country into magnanimity, good faith, and justice which shines forth as the noonday.

BEDTIME BOOKS.

What books are best reading for bedtime has been variously mooted of late in the English press. Evidently the subject is of more than quizzical importance. The increasing pressure of modern life leaves most of us only the bedtime hour or the lucid intervals of travel for reading of any sort. And it will freely be admitted that the late hour is more conducive both to deliberate choice and to enjoyment. Most of us would have to stand or fall by our bedtime books. In the English controversy there seemed some uncertainty whether reading in bed was an end in itself or a means to slumber. That accounts for a diversity of choice reaching from Dumas to Howell's Letters.

Possibly the matter is best got at by elimination. To begin with, there are obvious physical limitations. For the bed, as for the car or train, a book must be light enough to be held in the hand, or—less commendable method—propped on the chest. Thus, no man reads Mr. Berenson's 'Drawings of the Florentine Painters' in bed, though an enthusiast might sit up all night with it. And we have yet to hear of that old-school Liberal who can aver that he has read Mr. Morley's Life of Gladstone in the drowsy hours. Gibbon's 'Decline and Fall,' too, stands in stately desuetude after the library lights are out. A few persons of taste have the habit of dipping for casual amusement into the tomes of the 'New English Dictionary,' but this, we are confident, is rarely a nocturnal indulgence. It may very well be that the habit of reducing all standard literature to pocket form is insensibly an effort to lengthen the list of *cubicularia*. But here, too, the principle of no excess applies, for no sleeper has ever been apprehended with one of the Pickering Diamond Classics on the counterpane.

Admittedly, the matter of size is of minor concern. Incorrigibles will go to all lengths to balance a favorite volume under the midnight flame. Yet even incorrigibles will generally prefer the just mean, and here there is abundant, nay, embarrassing, choice. Who seeks merely a soporific will find it abundantly in Kant, Hobbes, and several of our professional humorists. Who desires more positive luxury, with drowsiness, will meet it in Morris's 'Earthly Paradise'—an ideal book to dream on. But few readers, probably, are moved chiefly by insomnia. One wishes rather a graceful finale for his day than a mere prelude to sleep. And this suggests that no too engrossing book is eligible. Reading all night is one thing—most of Thackeray has been many times so read. Probably the 'Ring and the Book' has lured some half-rebellious readers past cockcrow. But a spell of that potency is not for habitual exercise. For like cause, very stimulating books are not for this use. Mr. Brownell's 'Victorian Prose Masters' is not so to be dealt with, while bedtime Pater would be an abomination—unless, indeed, in the 'Imaginary Portraits.' On the same principle the obscurer styles are to be rejected. 'Prince Otto' you might well read, but hardly 'The Ambassadors'; Lamb on Roast Pig, but not Meredith on the Comic Spirit.

It should be already apparent that, clarity and serenity being presupposed, the real desideratum is brevity, or, failing that, adaptability to piecemeal reading. Undoubtedly poetry is the ideal—for the poetically inclined. Workaday readers, however, will be for prose then as always, and a bed-side census would probably find the novels in as great majority as elsewhere, yet by a tremendous fallacy, for most novels are too good or too bad to be nibbled at, and only massive, episodical works of the picaresque type—'Tom Jones' or 'Charles O'Malley' for choice—endure such treatment. By the same token, all the great racial epics and many of the mediæval romances insinuate themselves for midnight perusal. The anguish of Roland might take you too far into the night, but the council of the gods in the Iliad, Ulysses and Polyphemus, Beowulf and Grendel's mother, or the winning of Brunnhilde, would mean so many days well ended. Only the other day a popular edition of Lady Gregory's translation of the Cuchulain saga put deeply in her debt all who love to read old romance in the romantic hours.

But all are not romantic; and for the reflective or those deeply curious of human nature there is the list of essays (so they be not severely critical) and of memoirs and letters—but not formal biographies. Those who temperamentally are drawn to essays and memoirs need no counsel of ours. But it may be asked—in behoof of lovers of *distinctiones quædam*—why Emerson and Thoreau are read by no sensible person at bedtime, whereas Montaigne and Izaak Walton never savor better than in the small hours.

Strangely enough, no English contributor to the conference confessed a partiality for the most paradoxical and delightful kind of books for bed. Travels—and particularly accounts of perils at the poles, on mountain tops, and in bleak deserts—are perused with a singular voluptuousness between blankets. Peary and Nansen and the Duke of the Abruzzi never look more heroic than then, nor their lot more completely enviable. Tyndall and Whymper and Sir Martin Conway would keep one shivering blessedly through many changes of sheets. Marco Polo, Froissart, Dana, Herman Melville, are then most adventurous. Hakluyt is more than ever a boon. When the publishers will give us these books—or better, perhaps, selections therefrom—in manageable form, the roster of bedtime books will be fairly complete, and a stertorous return of thanks will be offered up from an appreciable number of bolsters. But no extravagant financial hopes should be laid upon the enterprise. Only such profits are contemplated as a conservative publisher might reckon with a good conscience as he ends his day. Ideal books for reading in bed have rarely been of the "best-selling" variety.

MAXIM GORKI ON THE BOARDS.

LONDON, December 2, 1903.

On Sunday evening, the 29th of November, at the Court Theatre, was presented to the audience of the Stage Society a very curious entertainment. Since its foundation four or five years ago this society has continually justified its existence by the presentation of foreign dramas unknown to the London stage, and many through its good offices have had their first opportunity of becoming acquainted with Ibsen, Heijermans, or Gorki. Last year the success of the season was a piece of surprising and lambent power, viz., Heijermans's "Good Hope"; and this year it is not to be expected that the committee can outdo in strangeness and literary interest their performance of the first night. The piece selected was Gorki's "Lower Depths," of which the action takes place in a Night Refuge in Moscow. There is no change of scene, and the story, if story it can be called, is as continuous as the days of the week. Indeed, those who witnessed the play did not see a drama at all; they merely looked through a peephole and saw figures in motion and alive.

In a Night Shelter many people come together—beggars, members of the lost legion, women in no more need of protection than gypsies, dilapidated actors, drunkards, thieves. This particular Night Shelter is kept by a "fence" and his wife, Kostoloff and Vassilisa; and Vaska, a long, sturdy fellow who does much of their thieving for them, though beloved by Vassilisa, is himself in love with Vassilisa's sister Natasha. The son of thieves and bred a thief, he has no natural liking either for his occupation or his company, and, after fairly considering and rejecting Vassilisa's offer to elope with her and murder her husband, prefers with unstained hands to be off with Natasha. But the jealousy of woman in-

tervenes. Kostoloff and Vassilisa torture Natasha till Vaska, hearing the cries, rushes in and strangles Kostoloff.

It may be thought there is some story here, and so there would be if with this it ended, or with this there were not entangled a dozen unconnected incidents. In point of fact, after the strangling there is another act: Vassilisa and Vaska are absent swearing against each other in the criminal court, and the usual talk of the Night Shelter continues undisturbed. In point of fact, also, the main story, which doesn't end, is so intertwined with other tangles of life threads that it is only afterwards one realizes that there has been a main story. When he is not telling the main story—and he is generally not telling it—Gorki is painting moving portraits of various typical waifs. One gets, after the fall, the life history of each. There is the actor whose organism, as he tells us perpetually, has been poisoned with alcohol and whose memory has been drowned in drink—an object pitiful enough, who probably in the twenty minutes we have of him goes completely round the circle of his wasted brain. There is the workman with the dying wife who cannot make ends meet, whose whole nature cries against sloth and beggary—the voice of the unemployed—and who in this hard and vain struggle becomes coarser than those worthless ones who accept their fate. There is the Baron, a former spendthrift, who forged, whose heart and mind have been whipped to tatters by the iron prison system; a silly, mocking, weeping epicene, out of whom both decency and manhood have long been wrung. There is Satine of the rough sailor type, who struck too hard when some brute played with his sister, and found when the prison doors were opened that his place in life was gone; a broken man, but, since his crime was generous, still a man, an outstanding figure where all are snivellers or sneaks.

To this queer company enters one called Luke, a pedler, who possesses an honest but poor trade; "a pipe for fortune's finger"—a clean pipe though a small; one to whom misfortune has brought a great gentleness and a toleration at once unmanly and infinite. They are many, he is few, and the sweetness of right anger is a thing no longer known to him; he has the kindness of a kind nurse for the dying woman, and a good word for the most base. To see this wholly true, weak and feminine figure as it was perfectly presented by Mr. James Welch was indeed a lesson in the poetry that understands. It was a character rendered so poetically and gently as to remind one of Hawthorne; only for its presentment there was necessary a sad yet intense cynicism quite unknown to the creator of Clifford.

The whole play is steeped in the atmosphere of pity, the whole thing is full of understanding. Gorki understands what his waifs mean, his waifs to whom life is so meaningless. "I am bored," says Vaska, stretching himself, "bored; I do not know why. Things are going along well, quite well, and all of a sudden it all dries up and it gets tiresome." Vassilisa flies out in a fury that the floor is not swept, and when she is gone another whistles and stretches himself and is stirred to impatience: "Every one trying to put things in order and yet there is nothing in order, nothing clean." No, in these depths there is no order as law, unless it be the iron law of suffering, and the final law that suffering ends, though even this seems unbelievable by some. Luke believes it and seeks comfort from it for the dying woman whose hand he holds; and, when she complains feebly. "I am hot," assures her kindly and as announcing the end of a journey that comes before death. But the gospel of rest in such a place sounds fairylike and strange, and Anna thinks there is but one answer to the question her parched lips repeat, "Do we suffer there as well?"

The optimism of the play, indeed, comes to no more than this: some time, somewhere, in this life or another, things may be better; there may be ultimately better lives or better men; and for that hope we have to be gentle, to give things a chance, broken to be humble and to bow. At least so Satine interprets Luke's lesson when the pedler has gone away. We ought to trust to the future, to the coming of the better man. This regeneration, it may be at our doors; even now, in some one about us, the light may be burning which is hid, and therefore let us respect our neighbors and especially the children, for on some day the child that is to better us may be born. One catches in language of this kind something of the mystical feeling which induces men like Gorki, despairing of the present, to voice their aspirations in the language of beliefs from which they have passed. So Tolstoi borrows for his greatest book the word 'Resurrection,' and in winter thinks of spring.

It would be the pedantry of criticism to add that this play of Gorki's in no sense satisfies the canons of the drama, for to be a play in the ordinary sense it has pretensions of the least. There is no real action, there is not even a selection of incidents, and by consequence one loses half the pleasure due from art. One merely sees bits of life, but one sees them with a poet's eyes; and it is of more interest to ask whether the stage may not legitimately be used for purposes of this kind when the result is the presentation, in a vivid form, of observation that is as remarkable and that leaves as clear an impress on the mind.

A. A. Jack.

Correspondence.

THE TRIBULATIONS OF CASTE.

To the Editor of The Nation:

Sir: Judge Carroll D. Wood, one of the Justices of the Supreme Court of this State, is a candidate for the Democratic nomination for Governor; the present Governor, Jefferson Davis, being also a candidate. It will be remembered that some months since they engaged in a public fist-fight.

It appears that at one time Judge Wood, as Circuit Judge, appointed a negro jury-commissioner, and thereby, prima facie, dragged the judicial ermine in the mire. The *Ouachita Herald* of this city, in its issue of December 4, undertakes the defence of Judge Wood by showing that, although he did drag the ermine as aforesaid, he did so in the interests of the Democratic party, and therefore his act does not render him unfit to serve as the chief executive of Arkansas! I enclose the editorial in which the *Herald* takes the remarkable position that a judge may use the judicial office for party ends, even though in order to do so he commits an act that under any other circumstances would degrade him in the eyes of all true Southerners. But what, after all, can be more self-evident than that the appointment of a negro to office (however worthy as an individual) is *malum in se* except when the interests of the Democratic party can thereby be subserved?

Respectfully, E. I. F.

Camden, Ark., December 5, 1903.

[The event dates back to "some eighteen years ago," according to the *Herald*, when

"Combinations were made by vicious elements, political parties opposed to the Democrats and the negro, and Democratic candidates were defeated and the welfare of the people endangered by the class of men who were being placed in power. Every one at all familiar with the conditions of those times fully comprehends this and knows it to be true. The only way for the Democrats to succeed was to get the better class of negroes to vote with them. To do this the negro had to be recognized. Judge Wood made these appointments on the advice of the Democratic county central committees in the counties where he had jurisdiction. His act at that time was considered all right, approved by the best men in the Democratic ranks in the State, and never questioned from that date until Gov. Davis, in his desperation, seized upon it as the only thing in all of Judge Wood's career that he could criticise."

Governor Davis, continues the *Herald*, is without excuse in present conditions for like action:

"Last year the State Election Board, of which he is chairman, appointed Marshal Murray, a negro, an election commissioner for LaFayette County. As Governor, he has appointed negro justices of the peace and negro notary publics in [a] number of cases. Judge Wood had good reasons for his appointing negroes. What reason can Gov. Davis give? Does not the argument he makes against Judge Wood in this particular apply to himself with much greater force?"

The Governor's reasons may at least be creditable.—Ed. Nation.]

TITIAN'S "SACRED AND PROFANE LOVE" ONCE MORE.

To the Editor of The Nation:

Sir: In the recent discussion noted in the *Nation* in regard to the literary source of Titian's picture called "Sacred and Profane Love" two points have been overlooked: his use of sculpture, and his invariable method of illustrating a mythological story.

Titian's use of sculpture is that of a painter. Mantegna was an archæologist, and copied the sculpture he introduced. Titian, on the contrary, translates his sculpture into paint, placing the bust or bas-relief only where it is needed to complete the composition by its color and its form. He also emphasizes the subject of his picture indirectly by bust or bas-relief, as leaves emphasize a flower. The stag-hunt on the fountain in "Diana and Callisto" (in the Bridgewater Gallery) shows this method of using sculpture, as do the playing cupids in the portrait of the little Strozzi girl. A deeper significance is given to "The Crowning with Thorns" by placing the bust of Tiberius in the picture, as in "Alexander VI. Presenting 'Baffo' to St.

Peter" the sacrifice to Eros sculptured on the base of the throne suggests the Borgia as well as the Pope.

On the fountain of the "Sacred and Profane Love" is the same recognition of the value of sculpture as an accessory. This bas-relief is not "Genius Whipping Love out of his Sleep," as Crowe and Cavalcaselle thought, nor is it "nymphs waking a shepherd" as Lafenestre decided. I find that Titian has placed Pegasus and the Muses (on the left of the bas-relief) suggesting the deeper fount of the Heliconian spring, while Apollo and Marsyas and Apollo and Daphne (on the right) suggest the music of nature; the entire bas-relief intensifying the poetic quality of the picture. Titian always uses sculpture according to this æsthetic law.

The picture as a whole is not an illustration of the story of "Medea and Jason," as Herr Wickoff thought it to be, nor of the "Forest of Ardennes," which is its source as given by Signor Palmerini. Titian's invariable method of faithfully following his text forbids these interpretations. This method is followed by him in both early and late pictures, and should not be overlooked. In any picture from a literary source, Titian makes the important part of the story the important part of the picture. He accents only where the text accents, and subordinates all accessories in the manner and order that the text subordinates them. A comparison of any of the following pictures with its literary original will show Titian's unfailing obedience to this great law of illustration. Whether he illustrates a story from Ovid (as he does in "Diana and Actæon," "Callisto and Diana," "Apollo and Issa," "Venus and Adonis," "Rape of Europa," "Perseus and Andromeda," "Ganymede"), or Ausonius ("Venus Anadyomene"), or Ariosto ("Ruggiero and Angelica"), his method is the same. "The Bacchanal," painted for Duke Alphonso, was suggested by the old French drinking-song which is on a sheet of music in the foreground of the picture—"Chi boit et ne reboit, ne çais qua boir soit."

In "The Sacred and Profane Love" Titian has illustrated a well-known love-song, the "Pervigilium Veneris." The text of Catullus that Titian owned appears to have included this poem, though later editors have ascribed it to an unknown author. For his "Bacchus and Ariadne" Titian uses part of another love-poem, "The Marriage of Peleus and Thetis," which was also in this volume. The picture called "Sacred and Profane Love" may also be a "tableau vivant," like the Duchess of Urbino as "Venus" in the Uffizi Gallery, or the "Allegory" of the Marquis del Vasto; but whether these figures in our picture are both portraits of Laura Dianti, or of members of the Aurelio family, or even, simply, studies of a fair model painted many times by Titian, the figures, as here arranged, are one of Venus's train (Peitho?) and Delia in the "Pervirgilium Veneris."

In this poem Venus sends her nymphs to invite Delia—"if her maiden modesty would yield to her prayer"—to join in "the spring festival"; 'to leave this grove unsullied by the slaughter of the chase," "for Dione shall reign in the woods." "To-morrow the virgins shall wear roses." "Cupid will go unarmed and naked; that he may do no harm with bow and arrows or torch." "The ewes and rams will flock to the shade"; Apollo, "the god of poets, will be there"; "the whole wakeful night will resound with song," "for the new spring is come, the singing spring, when the world is born." "The woods, quickened by showers, shake loose their locks of verdure." The refrain of each verse is: "To-morrow let those love who have never loved, and let those who have loved, love to-morrow."

Does not the sunset glow striking the castle tower and bathing the whole picture in its light suggest a fair morrow? The horsemen pursue the hare in the distance; the sheep seek shade in the meadow where the lovers embrace. Both mountain and lake are there. Cupid plays unarmed in the water like a harmless child (perhaps extinguishing his torch?); the incense floats through the warm air and drifts away with the clouds, where earth and sky respond to each other in the sunset. All suggests love. Here is the essence of the "Pervirgilium Veneris," concentrated and etherealized. Titian often shows the power of concentration, giving with two simple figures a whole story, but he never has shown this power more clearly than when he illustrated this love-song of the spring: "Cras amet qui nunquam amavit, quique amavit cras amet."

ALICIA M. KEYES.

CONCORD, MASS., December 7, 1903.

BAR SINISTER.

TO THE EDITOR OF THE NATION:

SIR: The utter absurdity of the term "bar sinister" has been pointed out so often that it would be a work of supererogation to call attention to it again, did it not appear to be a figure of speech that is popular in inverse ratio to its accuracy. When the phrase was used as the title to a novel published some three or four years ago, I looked in vain for any comment on it by the reviewers, even the *Nation* making no mention of the solecism. And now Mr. Richard Harding Davis confesses his ignorance by adopting it as the title to his latest story.

Intimate acquaintance with heraldic terms cannot be expected of the multitude; but it is incumbent upon educated people to use them correctly if at all, and a "bar sinister" is an impossibility. The use of the expression is equivalent to speaking of an oblique horizontal; not even "a crooked straight line" involves greater contradiction in terms. "Bar sinister" is a corruption of "bend sinister." It is a bend sinister that embellishes the cover of Mr. Davis's book, doubtless upon the supposition that in the language of heraldry it is the symbol that connotes illegitimate descent, though in fact it never had that meaning. The "charge" prescribed by the heralds to indicate illegitimacy is the baton sinister; the baton being a diminutive bend cut off at the ends so as not to extend entirely across the field.

FREDERICK W. GOOKIN.

CHICAGO, December 5, 1903.

["Popular, but erroneous phrase" Dr. Murray dubs "bar sinister," which may, however, be deemed to have divorced itself in ordinary usage from heraldic associations as completely as many a vocable from its etymology. In other words, had Mr. Davis not illustrated his "bar sinister" on his cover, he *might* have escaped a proper charge of solecism.—ED. NATION.]

Notes.

The Massachusetts Civil Service Reform Auxiliary offers, free of all expense, pamphlets on civil-service reform to all the high schools, normal schools, and colleges willing to make these pamphlets the subject of a lesson in their civics course. During the past two years nearly 50,000 of the pamphlets have been distributed to about 500 schools and colleges in every part of the United States. The pamphlets are 'The Merit System—The Spoils System,' by Edward Cary, and 'The Merit System in Municipalities,' by Clinton Rogers Woodruff. Copies, together with other of the Auxiliary's publications, may be obtained free on application to the assistant secretary, Miss Marian Nichols, No. 55 Mount Vernon Street, Boston.

The series of reprints of publications of a century or so ago, with their colored and other illustrations by many masters (New York: D. Appleton & Co.), is continued in an interesting way in eight volumes. Two of these are Ainsworth's 'Windsor Castle,' with process cuts after plates by Cruikshank and Tony Johannot, and designs on wood by W. A. Delamotte, and the same prolific novelist's 'Tower of London,' embellished by Cruikshank alone. 'The Second Tour of Dr. Syntax' is enhanced by twenty-four pleasing examples of Rowlandson's inventions in color; and the same author and artist are conjoined to advantage in the two-volume 'English Dance of Death,' which well exhibit the caricaturist's power, along with frequent charming backgrounds for his grewsome action. See the striking Death uncovering at the masked ball at page 165 of volume i. Nimrod's 'Life of a Sportsman,' with colored plates from the clever pencil of Henry Alken, is the last of these Ackermann reprints. Next in order is Bewick's 'Fables of Æsop,' in facsimile from Walker's Newcastle editions of 1818 and 1821. The reproduction here, it must be said, falls far below that of the foregoing. The famous cuts are hardly more than memoranda of their original selves, and afford no conception of their beauty. They have fared even worse than Blake's 'Illustrations of the Book of Job,' reduced, in the last of the volumes before us—all of which, in spite of shortcomings, have a curious historic artistic interest that will commend them for gifts.

We have delayed too long mentioning the four-volume reprint from the plates of Gayarré's 'History of Louisiana' (New Orleans: F. F. Hansell & Bro.)—a fourth edition, which Miss Grace King has supplied with a biography of the author. The intrinsic value of this work, concluded with a wail over the "martyrdom" of Louisiana in 1865, as chronicle is higher than its intellectual, judicial, or literary quality. It will give food for thought to any one endeavoring to account for the persistent difference in the human point of view North and South. In volume iv., for instance, on page 648, Mr. Gayarré, forty years after date, and with slavery abolished by the civil war, censures Gov. Henry Johnson for bespeaking respectful consideration by the

Legislature of a resolution, on the part of Ohio (in 1826), recommending to Congress and the States the abolition of slavery. "It is," says the historian, "by such timid language, by such knee-bending attitude, that the abolitionists were encouraged in their aggressions from the beginning." The same Governor vetoed a bill to prohibit free negroes from entering Louisiana. This calls down fresh wrath, in view of the Governor's seeking to avoid unpleasant complications if a foreign freeman of color should be deprived of his treaty privileges. We cannot quote further, but will refer to page 651.

Stevenson's 'Treasure Island' has been added for school use to the "Canterbury Classics" of Rand, McNally & Co., by the editor, Prof. Katharine Lee Bates of Wellesley, the editor of this series. The print is excellent, and the illustrations above the average.

Mr. J. C. Thomson's collection of 'The Suppressed Poems of Tennyson' (Harper) is a peculiarly mistaken piece of bookmaking. The only poems that it contains which could possibly be of service to the sincere student of the growth of Tennyson's poetic art are "Timbuctoo," and the twenty-four poems discarded from the 'Poems, Chiefly Lyrical' of 1830. These were all accessible in 'Cambridge Prize Poems' and in Mr. Churton Collins's recent edition of 'Tennyson's Early Poems'; while the reprinting of casual pieces and deleted stanzas which the poet wished forgotten, for the sake of insinuating that he wasn't much of a poet anyway, is—apart from its indecency—a singularly illogical proceeding. As a matter of fact, there is scarcely a poem which has not some line lighted by the unmistakable Tennysonian gleam, or warmed by his brooding concern for the affairs of men. Even if it were not so, there is about as much relation between these bygone experiments and the ultimate evaluation of Tennyson's art as there is between the thumbmarks on the superfluous clay that the sculptor dumps in the dissolving river and the world's pleasure in his marble masterpiece.

In Dr. T. A. Emmet's 'Ireland under English Rule' (Putnams), is brought together from historical and other sources, partly from old election campaign literature, the aspect most discreditable to England in her treatment of Ireland. Lowell's well-remembered line is reversed in its application: "'Tis you [England] 're the sinner ollers, she [Ireland] 's the saint." The page headings at once reveal the drift of the volumes: "Perjury of William of Orange," "Orange Oath to Exterminate Cathölics," "Brutality is Habitual with English Soldiery," "Illegality of the Union," "Ireland Could Support Fifty Millions," "Ireland's Overtaxation $600,000,000,000," "A Country Without Crime," etc. Any person with a fairly selected Irish library is likely to have most of the information in these volumes already to hand; others will here find collected much that is interesting. The appendix contains in 72 pages the "Diary of Thos. Addis Emmet, while acting in Paris as the secret agent of the United Irishmen." This, so far as we know, has never before been given to the public, and is a really valuable contribution to the history of the period referred to. An index makes available the somewhat scattered material contained in the work.

Some recent developments of discontent with the constitution of society may be studied in M. Paul Ghio's 'L'Anarchisme aux États-Unis' (Paris: Armand Colin). The author, after a disquisition on anarchy, narrates what he has observed in a visit to this country. He finds that the anarchistic propaganda has here assumed two forms—"l'individualisme libertaire et le communisme insurrectionnel." The former is indigenous, the latter imported. The individualistic or intellectual form, M. Ghio finds incarnate in Mr. Benjamin R. Tucker, whose views seem to command his admiration and even assent. So much, at least, every one must concede, that the state cannot be reformed except by the individuals that compose it, and Mr. Tucker's doctrine is commendable in so far as it emphasizes this truth. The comments of M. Ghio on this form of anarchy deserve more attention than his accounts of the insurrectional element. He tells us nothing new concerning its ebullitions of word and deed.

More is suggested as to the causes of that manifestation of anarchy called lawlessness by Mr. Joseph R. Buchanan's 'The Story of a Labor Agitator' (New York: The Outlook Co.). Society, as he would have it constituted, rests on the principle that no one shall work for hire without the permission of a labor union. Between this principle and that of individual liberty asserted by the existing constitution there is an irreconcilable conflict; and it is less surprising that Mr. Buchanan should have encountered fierce opposition than that he should have kept out of jail. He professes to have always discouraged violent methods, but he openly rejoices when such methods are employed against "scabs." Nor can the vituperation directed against courts and legislatures be regarded as tending to promote peace in the industrial world. Doubtless many of Mr. Buchanan's adversaries were no better than he; the specimens of billingsgate applied by brother journalists to him are as bad as the retorts which he submits for our admiration. In one sense all this sound and fury signifies nothing; but it is certainly ominous that large numbers of workingmen should select so intemperate a spokesman to present their aims.

Appropriate to the gift season, yet never out of date, is a well-considered and liberally manufactured volume of handsome appearance, 'The Record of a Family: A Means of Preserving Interesting Data in the Lives of the Children from Birth to Maturity' (G. P. Putnam's Sons). There are pages for photographs, and health notes and statistical tables at the end. This for the generation that knows not its family Bible, or prefers a more scientific record.

The Boston Public Library Bulletin for December has a new feature which we trust will be perpetuated. It is a carefully selected list of one hundred and fifty books, with their prices, in the English language and suitable for small public libraries, on the Fine and Decorative Arts. This and similar lists on other important subjects will prove helpful, not only to the persons for whom they are primarily intended, but to all seekers after good books.

Of human interest in the December number of the *Harvard Graduates' Magazine* we should rate first the article entitled "Sport or Business," and signed William James, jr., of the graduating class of the present year. Contents and tone are alike admirable, and what especially gives pleasure is the additional evidence of heredity in the excellent style of this effective plea for "sport." Next we may name the editor's review of the careers of the first ten scholars of a decade of classes in the fifties, tending to show that worldly honors and distinction were also fairly and sometimes markedly their portion; but again, by taking account of eminence attained by men of lower rank, that the rule is not without its exceptions. There are fine portraits of Alexander Agassiz, Henry Lee Higginson, and Le Baron Russell Briggs, the new president of Radcliffe; a view of the unfinished Stadium, and the second oldest view (Revere's print) of Harvard College. Significant in the Corporation records, to those who can read between the lines, is the turning over to the University of many shares of the Riverside Associates. In the obituaries, the class of 1837 passes to extinction. Per contra, the class of 1903 shows thirteen marriages before graduation—striking proof of the increased average age of A.B.'s.

Commander Peary's address on the value of Arctic exploration occupies the place of honor in the *National Geographic Magazine* for December. From his statement of plans of his proposed expedition—for the necessary funds for which he made a forcible appeal—it appears that novel features will be a steamer instead of a sailing ship, and a base on the shore of the Polar Sea. He admits the possibility of the existence of land in the central polar basin—"an isolated island continent, an Arctic Atlantis, with a fauna and flora of its own, with one day and one night in the year, lying there through the blinding days and opaque nights of countless geologic ages, as completely isolated from the world as if it were on Mars." This number of the magazine also contains accounts of the Government survey work in the Philippines, the grape-growing industry of this country, and the origin of different precious stones. In a communication describing a recent visit to the Muir Glacier, the "Mecca of the Alaska tourists," it is stated that "the ice-sheet has drawn back about two and one-half miles since 1899," the probable cause being an earthquake; also, that "it is not improbable that the end of the career of the Muir as a tidewater glacier is near at hand." The illustrations are numerous and interesting, especially those accompanying some notes on Panama.

In the opening article of the *Annales de Géographie* for November, Prof. A. de Lapparent discusses the various theories in regard to vulcanism. While he deprecates in the present state of our knowledge a too precise formula, he inclines to the belief that the phenomenon is due to the escape of gases generated by internal fires. An excursion made by students of the Sorbonne for the purpose of studying the Alps and the *molasse* region on the shore of Lake Leman is described by one of the party. Other articles are upon rice culture in Indo-China, and the various projects for developing it by canals for irrigation and navigation, and upon the important part which barges are playing in maritime commerce, with a mass of information thereon. In a note on the probable effect upon the Suez Canal of the Trans-Siberian and Bagdad Railways and the Panama Canal, attention is drawn to the fact that while in 1895 only two Japanese vessels passed through

the canal, in 1902 there were sixty-one, carrying Japan to the seventh place. There were but twenty-one United States vessels last year, and we occupy the eleventh place.

Borissoff, the Russian painter of Arctic landscapes, is the subject of an interesting article in *Petermann's Mitteilungen*, number ten. The son of a peasant, he early displayed great artistic talent, and coming to the notice of M. Witte, the then Minister of Finance, he was enabled to make several journeys to the polar regions. His last was to Nova Zembla in 1901-'02, from which he brought back more than 300 studies in oil, besides many drawings and sketches. But his interests are not confined to art. He and his companions explored and mapped a hitherto unknown part of the island, and made a large number of scientific observations as well as zoölogical and botanical collections. The narrative of the New York ethnographic expedition to the tribes in northeastern Asia is continued. In this instalment some of the native superstitions are described. Under their influence occasionally a young man will be deluded into the belief that he has been changed into a woman, and will immediately adopt the dress and manner of life of the other sex, and is sometimes married to a man. More rarely, women are induced to believe that they are men.

It is announced that, with the beginning of 1904, a new monthly journal, the *Süddeutsche Monatshefte*, will begin to make its appearance in Munich, with Wilhelm Wiegand as editor and leading littérateurs as collaborators. The new venture purposes to deal independently with modern problems in science, literature, and art, and especially to counteract the superficiality that reigns supreme in so many popular journals. Politics and economic questions will not be ignored. The projectors are convinced that the periodical literature of Germany especially is retrograding, and intend, if possible, to counteract this decadence. The journal will be its own publisher.

—There has been published by L. C. Page & Co. of Boston a little book on 'The Cathedrals of Northern France,' of which the author is Francis Miltoun, and the illustrator Blanche McManus. Although printed, as well as published, in America, it is an English book to its character, the appeals being directed to the British public. It undertakes to serve as a guide-book to the cathedrals, which it classifies in a certain way as the Grand Group, the Cathedrals of the Loire, Western Normandy and Brittany, and the like. Each church is made the subject of a brief study; thus, Notre Dame de Reims receives twelve and one-half pages of comment, and St. Étienne de Bourges has nearly as many; while to St. Bénigne de Dijon only three pages are given, and only two to Notre Dame de Senlis. Very unpleasing little pictures—pictures of no interest at all—accompany the text. At the close of the volume are a series of tables and lists, one of which gives the departments of France and the ancient provinces out of which they have been shaped. Another table gives the name of each diocese in France, with its cathedral city; the distribution of which seems to be that the archbishopric is printed in capitals, and the bishopric in ordinary lower-case type. Another list, number iv., gives the larger French churches which were at one time cathedrals, and are often referred to as if they were still cathedrals; an instance of this being St. Trophime at Arles, though it may not have been in the minds of many persons that this church was ever a cathedral. There is also a table of chronology, and following it are some details of dimension and date, together with little plans, not always well drawn and of no uniform scale; also plans of parts of towns, all very rough and slight, poorly engraved and not clearly understood. For a book of this sort it seems odd that a continuous running-title, 'The Cathedrals of Northern France,' should begin with the book and end with its final page. The binding is of a most fantastic character.

—Not only was Father Louis Hennepin a liar, but so contagious is his bad example that moderns find it difficult to write about him without falling into some pitfall or other. For this reason we should welcome the edition of his 'New Discovery' which has just been published under the care of Mr. R. G. Thwaites (Chicago: McClurg). The introduction contains a scholarly account of Hennepin's methods and a straightforward appreciation of his qualities. Though Mr. Thwaites is fond of styling the author "our hero," it must not be supposed that the Récollet's brag and bluster are let off under a plea of extenuating circumstances: "The opportunities afforded this evangelist for connecting his name with an important enterprise of exploration were perhaps unexampled, save in the case of Marquette himself. His first book, as the annalist of the expedition, is that of a boaster, and nearly every incident therein is obviously overcolored. . . . With surprising audacity he adopts a patronizing tone towards even such men as La Salle and Du Luth, and discredits their deeds, which were far greater than his own. The successors to the volume are marred by inexcusable and bungling mendacity, which shows the author to have been morally unfitted for the ecclesiastical calling." Here we have a frank and candid statement regarding Hennepin's qualities as an historian—a statement which is much better grounded than the apology of Shea. The 'Louisiane,' it is true, may be called an honest production if compared with the 'Nouvelle Découverte,' but all of Hennepin's writings are vitiated by the ingrained levity of his nature. Fortunately, it is not beyond the power of criticism to separate the genuine portions of the narrative from those which are written in a spirit of colossal bluff, and Hennepin's works will long retain their place among the most celebrated records of American travel. It should be observed that Mr. Thwaites used as the basis of his text an English translation of 1698. The 'Nouvelle Découverte' was published at Utrecht in 1697, and the 'Nouveau Voyage' at the same place in the following year. The English version embraced both volumes, and also contained matter relating to Marquette. We must not neglect to mention an important contribution which is made to the present edition by Mr. Victor Paltsits of the Lenox Library. The inexactness of Hennepin himself is but too well reflected in the bibliographical remarks of well-known experts like Harrisse, Sabin, Shea, and Winsor. Mr. Paltsits has been through the editions afresh, and gives in a series of bibliographical data the most careful description of titles that has yet appeared. The outward guise of Mr. Thwaites's two volumes is extremely neat, not to say beautiful, and, without imitation, recalls in certain respects the garb of the 'Jesuit Relations.'

—'Old Quebec, the Fortress of New France' (Macmillan) is the joint production of Sir Gilbert Parker and Mr. Claude G. Bryan. We are not told how the division of labor has been arranged, but this question is the less important as the volume is not very satisfactory. Indeed, we may call it disappointing, for there is no reason why Sir Gilbert Parker should not, with a little trouble, have written a really good book on Quebec. One may well feel surprised that a city so picturesque in appearance and so interesting by virtue of its past should still lack a worthy historian. There are the various essays of Sir James Le Moine, and innumerable references scattered through the histories of Canada, but a genuine history of Quebec remains to be written. The trouble with the present volume is that it was prepared in too much of a hurry and in a spirit of undue reliance upon the works of Parkman. We do not mean that we feel anything but admiration for the author who stands head and shoulders above all other historians of New France. Yet, while the works of Parkman are classics, the historian of Quebec should possess some original knowledge of his subject. A sketch of this kind may assist the tourist, especially as it is written in a diffuse and readable style. For the rest, it leaves our historical knowledge of Quebec unsupplemented and unchanged. We are anxious not to do the authors an injustice. The prefatory note begins: "The student of the history of the ancient capital of Canada is embarrassed, not by the dearth but by the abundance of material at his disposal. The present volume, therefore, makes no claim to originality. It is but an assimilation of this generous data [*sic*] and a simple comment upon the changing scenes which were recorded by such ancient authorities as the Jesuit priests and pioneers in their 'Relations' and by the monumental works of Francis Parkman." (Kingsford, Sir James Le Moine and the Abbé Casgrain are also mentioned). We would simply point out that the book lays no claim to an originality which it does not possess. The cover and the type are good. The illustrations, though numerous, are not of the highest quality.

—In these days fiction is so generally recognized as the most appropriate form for the expression of all kinds of ideas that even our essay writers seem compelled to pose as novelists in order to gain the attention of the public. A love story is the thread of Mr. E. F. Benson's 'The Book of Months' (Harper & Brothers), but the beads are reflections on the men and manners of our own day, with occasional meditations on the philosophical problems of all the ages. The danger of overseriousness is still further averted by the device of linking many of these comments with the varying phenomena of the seasons, whence the title of the book. The volume is everywhere interesting, especially in its acute observation and skilful description of the life of the country and of the streets. Many of the comments, too, are shrewd, but as a philosopher Mr. Benson is a little too much

of a sentimentalist to carry his readers with him. He gives a graphic representation, for instance, of the feelings of a passenger carried through the railway station of a large city in an express train. Just after the city is passed are two children at a stile waving their hats. Very well, so far; but when Mr. Benson goes on to moralize on the possibility that "in years to come the line of your life may cross theirs," one begins to inquire after his sense of humor. Another passage, illustrating the exuberance of the springtide by telling how it draws a country-house guest out of his room at midnight to run barefooted across the meadows and climb a young beech tree, thereby tearing his dress trousers, is meant to be idyllic, but is actually absurd. Perhaps, after all, Mr. Benson's thread is of more value than his beads.

—To readers of a literary turn who, though ignorant of Italian, would like to learn by an easy and pleasant process something of Italian letters, may be heartily recommended a handsome volume by Oscar Kuhns, 'The Great Poets of Italy' (Houghton, Mifflin & Co.). "The body of this book," the author tells us, "formed the second part of a volume on the Latin and Italian poets, prepared in collaboration with Prof. F. J. Miller of Chicago University, for the Chautauqua Literary and Scientific Circle." Chautauqua is to be congratulated on securing the services of so competent a scholar as Professor Kuhns. His book is eminently readable, and its attractiveness is enhanced by twelve excellent portraits of the writers studied, ranging from Dante to Fogazzaro. The "great poets" are so treated that the work forms a tolerably consecutive history of Italian poetry. Copious extracts from their compositions are given in translations that are almost invariably good. Occasional slight inaccuracies of statement, while they may momentarily vex the specialist, can do no great harm to the general reader. The Sicilian verse, in the first chapter, receives the usual sweeping condemnation, with no recognition of its redeeming features; "Il Notaro," its best exponent, is not mentioned. It is not obvious why Guittone should be called "the direct literary ancestor of Dante," nor why Guinicelli should figure as a "follower of Guittone"; the relation of the early Tuscan to the Bolognese school seems to be misapprehended. One is surprised that a Dante student, at the present stage of the discussion, should refer Francesca's "il tuo dottore" to Boethius. Boccaccio's 'Ameto' is something more than a "pastoral poem"; and "poem" is hardly a sufficient description of Politian's 'Orfeo.' In the characterization of Pulci, Boiardo, and Ariosto the humorous side of their talent might have been more emphasized. The poets most fully represented in Professor Kuhns's book are Dante (who occupies nearly a quarter of the volume), Petrarch, Ariosto, Tasso, Alfieri, Leopardi, and Carducci. The presentation of Boccaccio is scarcely adequate; while Metastasio, Parini, and Manzoni are dismissed with a page apiece. Leopardi and Carducci, on the other hand, are sympathetically and satisfactorily dealt with.

—A more pretentious work than the foregoing is Joel Foote Bingham's 'Gemme della Letteratura Italiana' (Florence: G. Barbèra; London and New York: Henry Frowde), a showy red and white volume of over a thousand pages, containing extracts in prose and verse, from about 150 authors. The editor designs his book, not for the casual reader, but for the English student of Italian literature, to whom he intends to furnish a "bird's-eye view" of its development from the Middle Ages down to the present day. The classification is simple and helpful; the discussions of general tendencies, as well as the biographical and bibliographical notices of the writers, though too brief to be of great use, are usually accurate. Very little, if any, of this matter is original with Dr. Bingham, who, as he declares at the start, has drawn freely from the best modern manuals and anthologies. Everything in the volume, even the preface, is written in Italian. The chief usefulness of such a compilation consists in providing samples of a host of minor authors who are seldom to be found in English and American libraries. Its inevitable fault is scrappiness. The selections are mainly good, but very uneven in length and kind; Goldoni, for instance, is represented by an entire comedy, while Sannazaro (spelled with *zz*) is cut down to one short poem and two paragraphs of prose. The typography, though always clear, shows a similar capriciousness, being sometimes, without apparent reason, of the size adopted in children's first primers, sometimes of moderate dimensions, and sometimes (especially in long extracts) on a literally microscopic scale. The red paint with which the outside of the book is liberally smeared loses no time in transferring itself to the fingers and thence to the pages. A portrait of the author serves as a frontispiece. In a supreme effort at up-to-dateness the volume bears the legend "1904."

—The fifth volume of Messrs. Funk & Wagnalls's 'Jewish Encyclopædia' (Dreyfus-Brisac—Goat) maintains easily the plan and standard of its predecessors. Whatever weaknesses may show themselves in the treatment here and there, and whatever inaccuracies may have crept into details, there can be no question that the book is destined to be one of the great thesauri, and one illuminating a peculiarly dark tract of knowledge. Its chief strength, as before, lies in its biography and history. In this volume there are lengthy articles on Egypt, France, and England, besides shorter treatments of such rubrics as Germany (of which the various States have full treatment separately), Europe (a sketch), Ferrara, Florence, Frankfort-on-Main. As parts of a great historical and sociological description of the Jewish world, these leave little to be desired; it being always understood that they seldom enter into minutiæ of research. The biographies are multitudinous, and seem fairly exact and full. In the treatment of the Old Testament in this volume a change appears of a somewhat curious nature. Hitherto each Biblical book has been considered in tripartite fashion, conservatively, rabbinically, and critically. Now two critical Richards take the field, but the second, Rabbi Benno Jacob of Göttingen, principally occupies himself with vehement denials of the critical positions. On Exodus he is pitted thus with Driver, but on Genesis he has it almost altogether to himself, with the merest critical bob added by Rabbi Hirsch of Chicago. The result for the reader is a fine, and probably most salutary, feeling of confusion.

—But all is not of such solid stuff. Here, for example, is told the queer, story so far as made out, of the Jewish Maundeville, Eldad Had-dani. Another semi-mythical and wholly interesting figure is Elisha ben Abuya, called mysteriously *Aher* (Another), heretic, Gnostic, crypto-Christian, Philoist, whatever he may really have been, often mentioned in the Talmud, but still shadowy with vague possibilities. More than the lives of a dozen rabbis lived in plain daylight, his legend illustrates the vitality and strange vicissitudes of Judaism. In the very latest Jewish literature he reappears in the rôle of Faust. Like him, in modern times, would seem to have been Hayyim Falk, who died in London in 1782, leaving a cluster of strange stories of powers more than human, and a diary, a medley of dreams, charitable gifts, book-lists, cabalistic names of angels, lists of pledges pawned with him, and cooking recipes. He was a Baal Shem, a Master of the most great Name of God, claimed thaumaturgic powers, made talismans, and, most wonderful of all, left a comfortable fortune behind him. Surely, it took a magician and adventurer of the Sons of Israel to be a pawnbroker besides and die rich. From this the passage is easy to folklore, medicine, songs, tales, and to a delightfully elaborate account of Elijah in rabbinic literature and mediæval stories—there is little difference. With his figure the Jewish imagination busied itself most lovingly and satisfactorily in tales full of life and beauty. Even of late the persistence of his cult in strange forms has been brought home to us; but the gap is wide between the "Uncle Elijah on his little gray horse" of Jewish childhood and—Dowie. The Genizas may lead us back to scholarship. They have proved dwellings of romance for the hunter of manuscripts, and fertile in those as the tombs of Egypt—literal tombs of books themselves. The illustrations, finally, are excellently chosen for atmosphere and suggestion. In one, Elijah announces the coming of Messiah; another is a permit to a Frankfort Jew to leave the "Judengasse" to see a coronation procession, not, however, to stand on the street; another, a permit to marry; another, a receipt given in 1181 by Aaron of Lincoln, Scott's Isaac of York.

—An ancient custom at the Oxford University Press was exemplified on the occasion of a recent brief visit, Monday, October 26, 1903, paid by Mr. Choate. A "keepsake" recording the fact and date of his visit was set up, and struck off in his presence. This practice would seem to have begun while printing was still not only wonderful, but also mysterious, as is shown by the various legends as to the invention of printing which still decorate even eighteenth-century "keepsakes." On one, printed for Samuel Showell early in the eighteenth century, we read: "The noble Art and Mystery of Printing was first invented by John Guttenburgh, a Soldier at Mentz, in High Germany, Anno 1440. King Henry VI. (Anno 1459), sent two private Messengers with Fifteen Hundred Marks to procure one of the workmen. These prevailed on one Frederick Corsellis to leave the Printing House in Disguise, who immediately came over with them, and first instructed the English in

this most famous Art at Oxford the same year, 1459." The next "keepsake" (1722) attributes the first printing in England to John Islip in (1471). But the spirit of modern criticism already asserts itself in 1767 with astonishing results. A "keepsake" of this year dates the first printing "about 1451," and says that "about 1471" it was brought to England by "William Caxton, a Mercer and Citizen of London, who, by encouragement of the Great and particularly of the Abbot of Westminster, first set up a Printing Press in the Abbey." Many of these "keepsakes" have been collected and discussed as early bookplates, but Messrs. Hart of the Clarendon Press, and Madan of the Bodleian, have shown them to be of the same general commemorative character with the sumptuous records printed on satin in 1832 and 1835 in honor of "her R. H. the Duchess of Kent and her illustrious daughter, the Princess Victoria," and of Queen Adelaide. The last keepsake of the nineteenth century was for the Duchess of Albany, and the first of the present century is the one commemorating Mr. Choate's visit.

ART AND CRITICISM.

Conférences Inédites de l'Académie Royale de Peinture et de Sculpture, d'après les Manuscrits des Archives de l'École des Beaux-Arts. Par André Fontaine, Docteur ès lettres. Paris: Albert Fontemoing. (Collection "Minerva.")

Recollections and Impressions of James A. McNeill Whistler. By Arthur Jerome Eddy. Philadelphia: J. B. Lippincott Co. 1903.

The History of American Sculpture. By Lorado Taft, Member of the National Sculpture Society. (The History of American Art. Edited by John C. Van Dyke.) Macmillan. 1903.

Miniature Painters, British and Foreign. With some account of those who practised in America in the Eighteenth Century. By J. J. Foster. London: Dickinson's; New York: E. P. Dutton & Co. 1903.

In his *avant-propos* M. Fontaine explains that his book is published in order to throw some light on the old question as to whether or no artists are the best critics of art. M. Brunetière had maintained that painters and sculptors are almost alone qualified to judge of works of painting and sculpture, and had specifically cited the Conferences of the old Académie Royale as instances of good criticism. "Diderot," he said, "had turned art criticism into a false route, whereas a hundred years before his time the Conferences of the Academy had directed it into the good, the true, the only way." In 1883 M. Jouin published a selection of these Academic discourses which hardly seemed to bear out M. Brunetière's contentions, and was accused of having printed only the poorer ones. After twenty years M. Fontaine has come into the field and has published a larger selection. He has chosen a series of Conferences on the relative merit of drawing and of color, because here is an important subject on which, if on anything, the opinions of painters should be valuable; he has added to this all the unpublished discourses of Le Brun and of Philippe de Champaigne, because these men were the foremost artists of the time; and if artists are the best judges of art, it would seem that the opinion of the best artists should be valued most highly. Finally, he has printed a number of discourses by minor artists, especially all those which are recorded for the year 1672, the year in which the debate on form and color was concluded. Having thus given us what should be a fair sample of the criticism of art by the artists of that time (many of these discourses were so highly prized by the Academy that they were re-read from time to time during a century), he virtually asks us what we think of them. His own conclusion is stated, in the last paragraph of his preface, to this effect:

"It is well to study these Academic Conferences with care as one of the most significant and curious expressions of the artistic conceptions of the seventeenth century; but I doubt if one will find among them any excellent models of art criticism, or if they will add much to the fame of the illustrious men who took part in them."

It may be well to explain, at first, just what these discourses were. They were originally called, not *conférences*, but *ouvertures de conférences*, which is an exact description of what they were meant to be. The Academy was supposed to hold a conference or discussion each month (though there was always some irregularity in the matter) before the students of the School and the public. One of the pictures from the Royal Collection was taken as a text, and the discussion was opened by the reading of a formal paper prepared by one of the Academicians. Each of the other Academicians was then asked for his opinion, and, finally, the collective opinion was formulated in a "Resolution" which was intended to settle the matter discussed, and to register the opinion of the Academy in a form that should be useful to the students in their future practice. In some cases we have a résumé of the discussion; in some cases the final resolution, which was apt to be disappointingly vague and general in its terms. For the most part we have only the opening paper—the *ouverture de conférence*.

These discourses, as became their purpose, were generally short. It must also be admitted that they were apt to be bald, to have no value as literature and very little as argument, and that the conceptions of art and of criticism embodied in them are extremely old-fashioned, and sometimes almost grotesque. LeBrun's elaborate allegorizing of Poussin's "Rapture of St. Paul," for instance, is as entirely aside from anything properly pertaining to art criticism as the most rampant of purely literary critics could have made it; only it is not so well written. On the other hand, we seem to see in the discourses of Philippe de Champaigne a man of sound sense and real discrimination struggling with the difficulties of expression in an unfamiliar medium. One feels that he really knew a great deal, and had something to say that might have been valuable if he had known how to say it. His lack of mental training and the poverty of his vocabulary reduce his statements to little more than that this is fine and that not so fine; and though such statements may be true, they are not especially interesting.

It is perfectly true, then, that these discourses are not models of art criticism, and yet they do not convince us of the falsity of M. Brunetière's contention that painters and sculptors are best fitted to judge of painting and sculpture. In spite of all prejudice and party spirit, the artist does, far more than the outsider, *know* whereof he speaks, and his instinctive judgment is far more likely to be just than that of the critic who approaches art from the point of view of the general public. When he gives reasons for his judgment, however, he is quite likely to give wrong ones. The value of his reasoning is in proportion to his intellectual power and logical training, just as the literary value of his work is in proportion to his power of expression in words. His æsthetic theories are neither better nor worse because of his practical knowledge, and his ability to explain the beauty of a work of art bears no necessary relation to his ability to feel it. Yet it always has been, and always will be, the collective judgment of the artists themselves which fixes the ultimate rank of a given artist or a given work. And when to the knowledge of the artist is added the power of reasoning and the power of expression, we have the ideal critic—the only one that seriously counts.

Mr. Eddy's 'Recollections and Impressions' of Whistler are rather slender. He seems really to have seen very little of his hero, and the best parts of his book are the reminiscences of others. He has evidently written hastily, and without due revision. His pages abound in repetitions, the same anecdote turning up more than once, and being repeated at length in almost identical phraseology. The bulk of his pages, however, is devoted to an attempted appreciation of Whistler's art and a restatement of Whistler's doctrines, and these bring up in another form the question of the relative value of the criticism of art by artists or by laymen.

The objection most commonly urged against the validity of criticism of art by the artist is that the artist is necessarily a partisan—that his success in the practice of his art is to some extent dependent on his seeing only those qualities of it which he is fitted by nature and training to deal with, and that he is therefore blind to other qualities and unjust to their possessors. One might answer that it is more important that the critic should be illuminating than that he should be unbiassed; that he should see certain things vividly and explain them clearly than that he should see all things with an impartial dimness. But, as a matter of fact, is the artist more biassed than his literary or journalistic backers? Was any artist ever more bitterly partisan than Ruskin, or any critic more broadminded than Fromentin? Mr. Eddy, we take it, is no painter, but his admiration for Whistler leads him to extravagances of praise, while he not only accepts the "Ten o'Clock" as gospel, but pushes its doctrines further than Whistler himself ever did.

A few specimens must suffice. Whistler has not only done things "beside which the finest art of France is crude and barbaric"; he is "the greatest artist since the days of Rembrandt and Velasquez—and greater than either in some respects." He is, "of all the men of his century or of many preceding centuries, . . . the *only* one to treat color as a composer of music treats sound." Finally, "As an etcher, comparisons are drawn between him and

Rembrandt. As a painter of portraits, comparisons are drawn between him and Velasquez. As a colorist he is beyond comparison, save with the masters of the Far East." After this it is not surprising to be told that the future art of America will be "the noblest of human achievements." As to the doctrine, Mr. Eddy holds that in Whistler's finest work "the *sole* object is color-music, quite regardless of other considerations," and that this should be so, for "there is no art in nature; there should be no nature in art," and "the use of color imitatively . . . is as base as the use of sound imitatively." We are far here from the naïve notion of the seventeenth century, that the only aim of art was "l'imitation de la belle nature"; are we any nearer the truth? Mr. Eddy thinks (probably with reason) that Whistler's controversies have in England and America overshadowed his art, "while to the French, who happily could not read his book, he is known only as an artist." Neither will they be likely to read this book, or to be tempted into belittling the great merits of a true artist by the spirit of opposition which its exaggerations are calculated to excite.

It seems to us that the real drawback to art criticism by artists is that in dealing with his contemporaries the artist turned critic may not feel free to express his whole mind. While he is young and ardent he may recklessly say what he thinks; but as he grows older and cooler, and his opinions become better worth expressing, the danger is less that he shall be unfair than that he shall be afraid to be thought so. Accusations of partisanship, not to say of malice and professional jealousy, are so currently made against every artist who may chance to find even the slightest fault in the work of another, that those who could talk to the best advantage learn to keep a lock upon their mouths, and to make their silent protest against false theories or wrong practice in their work alone. When they speak, they speak only in praise. It is a delicate and difficult task for a sculptor to write of his brother sculptors as Mr. Lorado Taft has undertaken to do in his 'History of American Sculpture,' and he has performed it better than might have been expected. He has industriously collected his facts, has marshalled them with skill, and has given a fairly comprehensive and accurate view of the evolution of the art in this country. He writes clearly and pleasantly, shows considerable critical discrimination in dealing with the work of our earlier sculptors, and gives us a definite notion of their shortcomings as well as of their merits. The greater part of the book, however, necessarily deals with men still living, all of them the colleagues and many of them the personal friends of the author, and here he has evidently felt less at his ease. The praise is still nicely discriminated—it is given for the right qualities, and is seldom unjustified or excessive in itself; but the lack of any balancing of faults against virtues, or of any measuring by an accepted standard, gives to this portion of the work an air of sustained eulogy. The absence of shade deprives the light of some of its value, and where so much is lauded, the laudation of the best is ineffective. We could wish, also, that in a work of this kind the desire to be just to every one had not led the writer to include so many names of artists whom he has not considered sufficiently important to merit characterization or discussion. Such mere lists of names are hard reading; they can never be complete; and omission from them may seem like an intentional slight, while inclusion is hardly a compliment.

The last book on our list is rather an aid to collectors than a piece of criticism. Its two handsome volumes contain some account of almost all the miniature painters of importance, in England or elsewhere, before the temporary eclipse of the art by the invention of photography, together with chapters on "Collections and Collectors," "The Care of Miniatures," etc., while the appendices give catalogues of famous sales and exhibitions, and an alphabetical list intended to include all artists who are known to have painted miniatures. The author, who is already well known as a writer on the subject of miniature painting, believes that this is the first general work on the subject to contain some account of American miniaturists of the eighteenth century, as it also contains chapters on the Continental schools. But miniature painting was, after all, a British art, and its greater masters practised in England, and were, after the days of Holbein, generally of English birth, so that it is natural that more space and a larger number of illustrations should be allotted to English miniaturists than to all others. It is these illustrations which will likely prove the most attractive part of the book, whether they be considered as examples of style for the guidance of the collector, or merely as beautiful and interesting things. There are 123 well-executed photogravure plates; and, since many of these plates contain several subjects, there are no less than 220 separate reproductions of miniatures, many of them among the best and most celebrated in the world, including a number of works of that king of miniaturists and truly great portrait painter, Samuel Cooper, who has given us the most evidently authentic portraits existing of Cromwell and Monk and Charles II., and many other important persons of that epoch.

RECENT POETRY.

When an author, especially late in life, prints a whole volume of his poems, he is apt to recall to the reader's mind that valet of the celebrated Beau Nash who used to come every morning from his master's room with a whole armful of slightly ruffled cravats, which he explained by the remark, "These, sir, are our failures!" The world, with a cumulative skill unconscious of itself, has usually selected the author's one triumphant achievement — it may be Holmes's "Chambered Nautilus," or Lowell's "Commemoration Ode," or Whittier's "Ichabod," or Whitman's "O Captain, My Captain"—and the world retains that; but the author, in due time and perhaps very properly, republishes all the rest in a volume of three or four hundred pages. Thus it is with Mr. Trowbridge's large volume of 'Poetical Works' (Houghton, Mifflin & Co.), a book which, as the reluctant reader at once perceives, is actually published for the sake of "The Vagabonds." Mr. Trowbridge, no doubt, put as much feeling and as much imagination into other effusions; but the hardened critic will not view it so. 'Castalian Days,' by Lloyd Mifflin (H. Frowde), includes this poet's later sonnets. We have already expressed the opinion that the accomplished author is limiting his fame by writing too constantly and almost monotonously in the sonnet form. As time goes on, moreover, Mr. Mifflin boldly measures swords with Shakspere himself, and even suggests discouraging comparisons when he ventures on the theme of "Antony in Egypt" (p. 34). He keeps more skilfully on his own ground when paying a tribute, and that gracefully, to the memory of Maurice Thompson (p. 8):

IN MEMORIAM.

A deeper hush is on the prairie's plain;
Far in the dark savanna's plashy meads
The heron, lonelier, stands among her weeds,
And e'en our woodlands have a touch of pain.
Gone is the singer of the sylvan strain
Whose note the indifferent world but little heeds;
Put by the syrinx of the seven reeds,
Our minstrel now will never pipe again!
He who along the dewy forest streams
Fluted at dawn full many a silver hymn,
Lies not within yon churchyard's lone retreat;
But in some region beyond telling sweet,
In immaterial valleys, strange and dim,
He lingers, lapped in never-ending dreams.

Far above Mr. Mifflin's in variety, though not in evenness of execution, are the "new sonnets," 'Vigil and Vision,' by John Payne (London: Villon Society). Mr. Payne is well known by his various translations of Boccaccio, Bandello, Villon, Hafiz, and 'The Book of the Thousand Nights and One Night.' His poems, inspired by pictures from Fortuny and Delacroix, and his "Musicalia," suggested by Mendelssohn and Wagner, indicate his variety of taste and training, and we know no limit to his muse except in his English ignorance of the joy that Americans find in winter. "Winter's spleen," "winter's martyrdom," "winter's grief" appear constantly. He admits that winter indoors may have some pleasures, but out of doors he offers us only "mute is the world for misery," "corpse of cold nature," "winter's deathly dream," "the sorry seasons of the snow"; and all this of a season which awakens shouts of delight in every American boy or girl above the latitude of Virginia. In the same way our radiant autumnal woods never appear in his verse; he only apologizes for the "russet woods and leaf-strewn ways." Personally, the only Americans who reach him are Gen. Robert Lee and Herman Melville, to the latter of whom he writes the following sonnet (p. 62):

None of the sea that fables but must yield
To Melville; whether with Whitejacket fain
We are to share, or Redburn, joy and pain;
Whether through Mardi's palaces, palm-ceiled,
We stray or wander in Omoo afield
Or dream with Ishmael cradled at the main,
High in the crow's-nest o'er the rocking plain,
Few such enchantments o'er the soul can wield.
But over all the tale of Typee vale,
O'er all his idylls of the life afloat,
"The Whale" I prize, wherein, of all that wrote
Of Ocean, none e'er voiced for us as he
The cachalot's mad rush, the splintered boat,
The terrors and the splendors of the sea.

Miss Josephine Preston Peabody is evidently taking a little lyrical rest between her fine drama "Marlowe" and her next dramatic poem. She puts forth a little volume of a hundred or so short lyrics or meditations, 'The Singing Leaves: A Book of Songs and Spells' (Houghton), of which the best are usually the youngest in conception. These have the unconsciousness and the childlike buoyancy of Stevenson, with, perhaps, as we fancy, a feminine atmosphere and a slightly closer texture. Take the following (p. 38):

THE BUSY CHILD.

I have so many things to do,
I don't know when I shall be through.

To-day I had to watch the rain
Come sliding down the window-pane;

And I was humming all the time,
Around my head, a kind of rhyme;

And blowing softly on the glass
To see the dimness come and pass.

I made a picture with my breath
Rubbed out to show the underneath.

I built a city on the floor;
And then I went and was a War.

And I escaped from square to square
That's greenest on the carpet there.

Until at last I came to Us;
But it was very dangerous:

Because if I had stepped outside,
I made believe I should have died!

And now I have the boat to mend,
And all our supper to pretend.

I am so busy, every day,
I haven't any time to play.

In the same charming infantile vein is the following (p. 46):

LATE.

My father brought somebody up
To show us all asleep.
They came as softly up the stairs
As you could creep.

They whispered in the doorway there
And looked at us awhile.
I had my eyes shut up, but I
Could feel him smile.

I shut my eyes up close, and lay
As still as I could keep;
Because I knew he wanted us
To be asleep.

Of some of the older poems, so to speak, it may be said that they are not quite simple enough, or at any rate never become quite so clear to the reader as to the writer. Yet on the whole they continue to inspire the reader with more confidence in Miss Peabody's muse, perhaps, than in that of any of her young contemporaries.

Mrs. Ella Higginson's distinct and unquestioned ability is once again visible in 'The Voice of April-Land, and Other Poems' (Macmillan). There are very marked limitations which rarely allow her a wholly complete and triumphant poem, and somtimes react in morbidnesses, as in "The Cry of the Drowned" (p. 72). We extract one of her most powerful, because among her quietest, pieces (p. 85):

MIDNIGHT ON BROOKLYN BRIDGE.

Ah, me! I know how large and cool and white
The moon lies on the brow of Sehome Hill,
And how the firs stand shadowy and still
Etched on that luminous background this soft night;
How the night hawk sinks from his starry height,
And breathes his one note, mournfully and shrill,
And crickets clamor in the marsh until
The dusk grows vocal with their deep delight.
City, a lifetime spent in thee were not
Worth one night in my western solitude!
Thy pulse is feverish, thy blood is hot,
Thine arteries throb with passion heavily;
But oh, how sweet I hear, in interlude,
The beating, moon-lured tides of Puget Sea.

Mr. William Watson holds manfully to his well-known attitude of independence in his 'For England: Poems Written during Estrangement' (Lane); and certainly no poet has need to justify himself who inscribes the dedication of his book to Leonard Courtney and closes with the "Lines to the Right Hon. James Bryce.' Never more distinctly has he shown his love of country and his intense loyalty to principle; and there is no doubt of the future recognition of one who can pay this tribute to an enemy (p. 14):

THE ENEMY.

Unskilled in Letters, and in Arts unversed;
Ignorant of empire; bounded in their view
By the lone billowing veldt, where they upgrew
Amid great silences; as people nursed
Apart—the far-sown seed of them that erst
Not Alva's sword could tame; now, blindly hurled
Against the march of the majestic world,
They fight and die, with dauntless bosoms curst.
Crazed, if you will; demented, not to yield
Ere all be lost! And yet it seems to me
They fought as noblest Englishmen did use
To fight, for freedom; and no Briton he,
Who to such valor in a desperate field
A knightly salutation can refuse.

Professor Woodberry has collected in one volume under the general head of 'Poems' (Macmillan) the substance of five previous volumes. In his brief preface he says: "If the result is less than it should have been, there are here some gleanings of time from a life never so fortunate as to permit more than momentary and incidental cultivation of that art which is the chief grace of the intellectual life." Every word of this sentence commands reverence for its truth and nobleness except the word "fortunate," since no man is really qualified to judge what that means as applied to his own career; and no one can guess whether what the world calls fortune or misfortune has most profited him in the end. The same individual service which has placed this poet's work on a plane so high, has in a manner spread a thin film or haze about it, so that by the great majority of readers the ultimate product will be admired rather than felt. It is not so much that Mr. Woodberry's poetry is cold as that its very warmth seems to lie at the edge of coldness. Its imaginativeness is unquestioned; his very titles charm; yet there is always a little sense of reserve. He has the poet's ear for a phrase, for a syllable, and the reader feels the truth of the statement when Mr. Woodberry writes: "The author can claim only that he has written no line except for itself alone." If he is to remain simply a poets' poet, not the poet of a nation's heart, this is clearly not because his own heart does not go out to others; for that it really seeks them is shown in this little poem, putting into words the blessing of child-love, pure and simple (p. 112):

THE CHILD.

It was only the clinging touch
Of a child's hand in the street,
But it made the whole day sweet;
Caught, as he ran full-speed,
In my own stretched out to his need,
Caught, and saved from the fall,
As I held, for the moment's poise,
In my circling arms the whole boy's
Delicate slightness, warmed mould.
Mine, for an instant mine,
The sweetest thing the heart can divine,
More precious than fame or gold,
The crown of many joys,
Lay in my breast, all mine.

I was nothing to him;
He neither looked up nor spoke;
I never saw his eyes;
He was gone ere my mind awoke
From the action's quick surprise
With vision blurred and dim.

You say I ask too much:
It was only the clinging touch
Of a child in a city street;
It hath made the whole day sweet.

On the other hand, the high-water mark of the volume has perhaps been indicated by the author himself in placing his two superb sonnets "At Gibraltar" on the very first pages of his book.

That "chartered libertine" of literature, Rev. Dr. Edward Everett Hale, has thrown the commonplace-books of a family into a volume called 'New England History in Ballads, by Edward E. Hale and his Children, with a Few Additions by Other People' (Boston: Little, Brown & Co.). Nothing would probably be felt by the chief editor as a greater compliment than to say that this book is journalistic from cover to cover, illustrations and all. It includes, incidentally, poems to the stars and on Columbus, also a hymn on three anniversaries, and a sonnet to the ship which brought a copy of Michael Angelo's statue of Christ from Italy to America. The editor says in his introduction: "It might be said of New England that she has no ballads, and that those she has are not good" (p. viii.), although he is afterwards compelled to admit that Longfellow and Whittier have come tolerably near success. To fill this gap, the jovial divine, with inexhaustible and cheery egotism, contributes himself and household. It must be said that the best of the ballads are the commonplace old ones, "Yankey [*sic*] Doodle" (p. 116) and the like; and that there is also a very considerable range of merit and demerit in the illustrations. There runs through all, moreover, the same limitation which will always keep 'The Man Without a Country' from being assigned to the higher rank in literature—that is, they are mostly written from the "my country, right or wrong" point of view. The book also preserves some odds and ends of merely local rhyming, not elsewhere collected.

CHILDREN'S BOOKS.—II.

'The Magic Forest,' by Stewart Edward White (Macmillan), is well called by the author "a modern fairy tale," for though it deals with what are supposed to be realities, its plan is as whimsical as the conceits of Grimm and Andersen. It relates the adventures of a nine-year-old New York boy, who, having fallen snugly asleep in his berth on a Canadian Pacific train, awakens at dawn to find himself standing alone, half-dressed and shivering, among the misty trees of a boundless forest. He does not know that he has left the train in a fit of somnambulism, impelled by the visions with which a day's travel along the edge of the wilderness has filled his head; so he can only believe himself transported by enchantment to a magic land, and he looks about for the wonders that ought to happen. A party of Indians here drive their quivering canoes over the edge of a cataract into the story, and carry the willing boy along in their journey to the north. They are fur-trading Ojibways, somewhat suggestive of the Hiawatha legends, and his five months' wandering with them, full of lessons in simple woodcraft, makes a pretty little sketch.

'Wanderfolk in Wonderland,' by Edith Guerrier (Small, Maynard & Co.), consists of six bright, fantastic animal fable stories. The moral, stated text-wise at the beginning of each story, seems in several cases to be aimed at older heads than children's. For instance, the aphorism, "Do not force another to do things you want him to do until you find out what he himself wants to do," may give a timely jog to the perceptions of teachers and parents, but will not greatly illuminate for childish minds the "admirable fooling" of the story that follows.

'The Curious Book of Birds,' by Abbie Farwell Brown (Houghton, Mifflin & Co.), is an attractive collection of tales and fables about birds, taken from the legends, chiefly unfamiliar, of many different peoples. The stories are told in a pleasant way that will interest children. These quaint fancies from the childhood of nations will be quite as persuasive teachers of gentleness and good will towards birds as the carefully recorded observations and accredited biographies of modern popular bird literature.

In 'Mother Bunny,' by Harriet A. Cheever (Dana Estes & Co.), a rabbit of the woods gives an account of her life, and describes rabbit homes and ways and neighbors. It is a pleasant little story, in which fancy mingles with fact.

Mr. William Wells Newell's considerable "Aftermath" greatly enhances the value of his 'Games and Songs of American Children,' now issued in an enlarged edition by Harper & Bros. In the twenty years which have elapsed since the first, he has profited particularly by Mrs. Gomme's parallel English collection, and his own is more than ever classic and standard for the theme of which it treats. While it is scholarly and scientific in its treatment, it is a very mine of nursery rhymes, frequently accompanied by the music. Mr. Newell is more than ever convinced of the English derivation of these childish plays, some of which, like so many vocables of the language, have survived here after being lost to sight in the mother country. He is able, from his own family papers, to furnish an analogous survival of "the custom which entitled a lady, even on a first introduction, to honor with a kiss any favored gentleman." His great-grandfather (no doubt an attractive person), coming, an Englishman, to Massachusetts after the Revolution, found the custom obligatory there, "rather to his disgust."

'A Little Brother to the Bear,' by the Rev. William J. Long (Ginn & Co.), is an account of incidents in the lives of wild animals observed by the author. The most remarkable part of the book relates to what Mr. Long calls "animal surgery"—that is, the self-administered treatment of wounds and other injuries. In speaking of animals' methods of dressing wounds, he says: "It is noteworthy here that the bear uses either gum or clay indifferently, while the beaver and muskrat seem to know enough to avoid the clay, which would be quickly washed off in the water." Mr. Long was fortunate enough to see a woodcock apparently plastering its leg up with a clay and fibre bandage. He concludes his interesting account of the incident with the following words: "I had my own explanation of the incredible action; namely, that the woodcock had a broken leg, and had deliberately put it into a clay cast to hold the broken bones in place until they should knit together again." This explanation he found confirmed twenty years later by a friend's testimony concerning a similar case. Scientists who have hitherto had difficulty in reconciling Mr. Long's observations and interpretations with the fund of facts which they as a body have collected, will be equally perplexed by parts of this book, and conservative readers may prefer to delay their acceptance of some of Mr. Long's interesting theories until professional naturalists shall obtain more corroborative evidence.

Even if we leave out of sight Mrs. Wiggin's Penelope series, as too different in character to admit of comparison, we cannot but rate her 'Half a Dozen Housekeepers (Philadelphia: Henry Altemus Co.) as greatly inferior to its own sequel, 'Rebecca.' In the first place, it is highly improbable that six girls of one generation back—if not two, for the writer tells us that "girls were still 'young females' when all this happened"—should have been allowed by their parents and their school authorities to spend an unexpected vacation by themselves in an empty house. In the second place, it is difficult to see for whom the book is intended. The story, if the word be not too pretentious for so slight a series of incidents, is too "childlike and bland" for any one over ten, yet at that age a little girl would hardly appreciate the long words and the hints about lovemaking. Still, the book may be recommended on the same grounds as grape-nuts or any other cereal; if the public can be induced to like it, there is no doubt of its wholesomeness.

Howard Pyle draws for his 'Story of King Arthur and his Knights' (New York: Scribners), out of the twenty-one books of Malory, only from the first, third, and fourth, modifying the narrative from other sources. Many of the incidents selected are altered for children, and many more are expanded beyond recognition. Thus, the dramatic touch of the naked sword hung by the injured Pelleas over Gawaine and Ettard is entirely omitted; Guinevere is made to have her first sight of Arthur as he lies wounded in a hermit's hut, instead of watching him from the window fighting with her father's giant enemy, as in the continuation of Robert de Borron's romance; Gawaine receives a character as much too noble as in 'The Idylls' it is too base, and, on the authority of one obscure old English ballad, figures as a model of married love; while a truly Indian tale of Arthur's assuming the disguise of a gardener's boy at Cameliard is evolved apparently out of the present writer's inner consciousness. Like the critic on Farrar's 'Life of Christ,' we long for "the more concise original version." All this is, however, a matter of taste, and the stories, from whatever sources they are taken, are well told.

There are occasional lapses, both into colloquialism and also into what Stevenson called "Tushery," as when we read "until the King should be through his business," or "At this the face of that knight fell all pale, like to ashes, and he emitted a sound similar to the sound made by a hare when the hound lays hold upon it." One short sentence of Malory's, " 'This is a simple cause,' said Sir Gawaine; 'strange men ye should debate withal, and not brother with brother,' " is inflated into the following: "At this Sir Gawaine was very greatly astonished, and he said, 'Messires, I cannot understand how so great a quarrel should have arisen from so small a dispute; and certes it is a great pity for two brothers to quarrel as ye have done.' " It may seem hypercritical to comment on the strange heraldry which blazons a "gryphon black upon a field of green." A fairer and more general criticism may be passed upon the illustrations, which are sadly inferior to those of 'Robin Hood' by the same hand. The surpassing beauty of Guinevere and Vivien becomes a matter of faith and not sight, while Uther Pendragon bears a painful resemblance to the Scotch kings at Holyrood. Finally, we could wish that the author had not spoilt the simplicity of the old tales by inserting morals on every possible occasion. Even Tennyson could not make the legends of the Round Table into a Sunday-school book, and it is regrettable that Mr. Pyle should, by his little sermons, have diminished the debt of gratitude rightly owed him by all children.

The authoress, Grace Luce Irwin, of the seven 'Drawing-Room Plays' (San Francisco: Paul Elder & Co.), disarms criticism in her first prefatory note by reminding the reader "that a good reading play is often a very different thing from one which acts well." Two of the pieces are pathetic, and in both we get a clever handling of the perennial topic that men are deceivers ever. As to the others, it is absurd to examine from a literary point of view such utter extravaganzas. It is possible that the girls in them may seem less hoydenish and unrefined on the stage than in a mental tableau; let us at least give them the benefit of the doubt. M. E. M. Davis's 'A Bunch of Roses, and Other Parlor Plays' (Boston: Small, Maynard & Co.) has considerably more merit. The first play is indeed a clear imitation of "Le Monde où l'on s'ennuie," and the last, with its satire on the new woman, is trite both in subject and in treatment. Yet all the six have a certain humor and swing and life that goes far to redeem impossible situations and exaggerated character-drawing. One of them, "Christmas Boxes," is a wholly charming little piece. With regard to one of the others, it may be remarked that a Sir Henry Tipton could by no possibility be "His Lordship," and would not, even at Pass Christian, be so addressed by an English valet.

Pericles and Aspasia. By Walter Savage Landor. (The Chiswick Library of Noble Authors.) New York: The Scott-Thaw Co. 1903.

The case of Walter Savage Landor reminds one that Buffon's dictum, "The style is the man," is one of those truisms of which the reverse is also true. There was the Landor who sat in the centre of his being and wrote beautiful calm studies of Greek life, the literary Landor; he seems to have little in common with the noble savage who threw his cook out of the window and his plate on the floor if he did not like what was on it. Landor the writer is a model of the restrained style; Landor the man never once, as far as we know, practised self-restraint. In his day, people still thought a little vaguely of the Greeks and Romans as "the Ancients." Carlyle called Landor a Roman; Byron, whose judgments of living writers were merely contributions to personal criticism, called him a Bœotian—meaning, of course, to annoy. As a matter of fact, he was a thorough Englishman of the choleric type, who never acquired a complete mastery of Greek, but, for all that, by sheer force of a vital imagination, placed himself at the Greek point of view, or at least envisaged the Greeks in a way that struck his contemporaries, and still strikes us, as Hellenic. In such a work as the 'Pericles and Aspasia' his style displays the lucidity, the harmony, the measure, which were lacking to his life, and which we consider essentially Greek. Yet, after all, that same passion for a perfect equilibrium was often, for the Greek writer, as for Landor, a literary pose. No one, for instance, is a more persistent advocate of the golden mean than Theognis—"No excess" is the text of his monotonous elegiacs; but turn the page and you find him demanding the "black blood" of his enemies to drink. There speaks the true Theognis as he practised, dropping for the moment the Theognis who preached.

Landor's first intention had been to vary this imaginary correspondence with conversations, of which one sees the traces in the long dialogues that Aspasia reports in her letters. There is a good deal of poetry in these letters and in Cleone's replies. Most of it is unworthy of Landor, who is seldom happily inspired when he attempts sportive verse, though he often succeeds with sportive prose. But he included in 'Pericles and Aspasia' a dramatic poem, "The Shades of Iphigenia and Agamemnon," which was his highest achievement of the kind, and the lines on Artemidora of Ephesus, one of the most beautiful of his shorter poems. They are worth more to the admirers of Landor than their prose setting, though that setting includes the description of the performance of the "Prometheus," at which Aspasia met Pericles for the first time, the trial of Aspasia, the imaginary speeches of Pericles, the pathetic end of Cleone. There are few of Landor's works that gave him such a chance to display his variety as the 'Pericles and Aspasia.' It contains some of the best examples of his prose style. He was a master of rhetoric, and he knew how to avoid the monotony that lies in wait for the English writer of the smooth "Attic" style. His favorite device is to coördinate his clauses: "I could have demolished the house of my adversaries," says Pericles; "I could have exiled them from the city; I could have been their master; I am more: I am my own."

The first publisher of 'Pericles and Aspasia,' in 1836, would have been a loser by his venture had not Landor repaid the sum of one hundred pounds that was to have been his share of the profits. The present edition is limited for America to 200 copies. It has fallen on happier days. Landor is not likely to be neglected in that revival of interest in the English classics which is the best omen for the future of this century's literature. This folio volume has the perfection of type, of paper, of general effect that one expects from an *édition de luxe*. It is happily free from the overdecoration that makes many modern *éditions de luxe* positively offensive. The frontispiece is a portrait of Landor based on the painting by Boxall.

The Songs of Robert Burns. By James C. Dick. Henry Frowde.

Thousands of composers, professional and amateur, have adapted melodies to poems, but it is seldom that the process is reversed. Among those who have adapted poems to tunes, Robert Burns is the most notable. But although he appears always to have associated music with his poems, his biographers have persistently ignored his remarkable achievements in this line, or attempted to belittle them, even charging him with a "dull ear" and an "untunable voice." Mr. Dick comes to the defence. He admits that Burns was a mediocre vocalist, with a rough voice, and that

"about the higher forms of the musical art he knew little and cared less. He never heard a symphony or a string quartet; and though at the houses of some of his friends he listened to sonatas on the harpsichord, they raised in him neither emotion nor interest. His knowledge of music was in fact elemental; his taste lay entirely in melody, without ever reaching an appreciation of contrapuntal or harmonious music."

But, for Burns's purpose, this was sufficient. He picked up his tunes wherever he could find them—in collections or from the singing of country girls; and hundreds of the Scotch folk-tunes inspired him to write immortal poems, as the poems of Goethe, Heine, and others, conversely, inspired the world's great writers of art-songs.

On the subject of art-songs Mr. Dick goes as far astray as the Burns biographers concerning that poet's musical attainments. He remarks in a footnote that "all artistic music fades before the continuous progress of the art; whereas the unconscious and untutored music of nature, the anonymous airs of the people, which are the basis of the art, remain unimpaired by age." In truth, the best art-songs are as immortal as any folk-music, and although the 361 tunes printed in Mr. Dick's volume include gems like "Ye banks and braes o' Bonnie Doon," and "Should Auld Acquaintance be Forgot," not one of them is equal in inspiration to the Scotch songs of the American Edward MacDowell, or the melodies of the great German song-writers. There is another point on which issue may be taken with our editor. "I designate Burns a tone-poet," he says, "because he wrote for music, and his songs with their airs are a study in tone-poetry." This may be permissible, but all other authors who use the word tone-poet apply it to the writer of the music, not of the words.

Whatever name Mr. Dick may give to Burns, he has deserved well of him and his countless admirers by bringing together in one volume for the first time all of his songs with the melodies for which they were written. It was a difficult task to perform, as the 151 pages of historical notes eloquently attest. The editor must also be specially commended for giving simply the melodies without the added pianoforte accompaniments, which are so apt to alter the true character of these folk-songs. He therefore justly says that this "is not a music-book in the modern sense; only a quarry for the constructive composer and for the student of folk-songs." The poems themselves, it may be well to add, are printed complete and unexpurgated.

Gossip from Paris during the Second Empire. By Anthony B. North Peat. D. Appleton & Co. 1903.

From matter originally in abundance sufficient to fill nine bulky volumes, Mr. A. R. Waller, who has edited this disinterred special correspondence, has contrived to extract enough for a single one without seriously affecting the continuity of a record of six years (1864-70). These newsletters, of greatly varying lengths, were written, chiefly for the London *Morning Star*, by a Government attaché in Paris, in whose favor the usual embargo had for some unexplained reason been lifted; and they would no doubt have been continued under the Republic but for the death, by accident, of their author during the early days of the siege. Mr. North Peat, however hampered he may have felt through consciousness of the exceptionally delicate nature of his task, wrote with something of the ease of an accomplished *causeur* living in good society, and privileged to add to club or drawing-room gossip a good deal of official information obtained at first hand, but not of a character to disturb political equilibrium. It would be idle to look in such a work as this for the aggressive, occasionally impertinent, entertaining manner of 'An Englishman in Paris,' but the book is plentifully stored with amusing anecdotes touching celebrities of divers kinds, from crowned heads and diplomats to *danseuses* and even criminals; the narrative all the while threading its easy way through the reckless carnival of pleasure that marked the last years of the imperial régime. A single instance may indicate the social freedom of that day:

"After the celebrated songstress (Thérèse) had entranced her audience at the Duchess of S——'s party last Thursday, some of the *jeunesse dorée* asked her if the songs she had just acted were the same as she was in the habit of performing at the Alcazar. 'Oh, no,' was her reply. 'What I have sung here would not be tolerated by the police' " (p. 87).

Several of the best stories relate the tribulations or the foibles of men of letters. The now-forgotten Vicomte Touson de Jerrail, a popular writer of romances of thrilling adventure, was compelled to "clear out the lower story" (viz., the feuilleton column) of his newspaper under editorial command, and in four days had killed off fourteen of his characters with no ungentle hand; with the fifteenth he was obliged to continue for many weeks, the previous slaughter having added four thousand subscribers (p. 119). We further learn that Baudelaire's morbid fancies belonged to his radically cruel nature: "He loved cats, because he sympathized with their nature. He well-nigh lost his hand once at the Jardin des Plantes by touching the nose of a lion with the burning end of a cigar" (p. 191). A reasonable amount of caution should, however, be exercised before accepting such "gossip" as fact; for we now and again come on such a surprising statement as (p. 192) that "Fernand Caballero conceals the name of a Queen's sister—no less a personage than the Duchess of Montpensier"—for which choice piece of information the *Figaro*, it seems, was responsible. The *Borbonidæ* have been charged with many deeds of which they were incapable; it remained for an inventive journalist to find one of them guilty of literature. By anticipation, in another case, a blameless physician is exhibited in the following undesirable light through undesigned shifting of items: "Doctor X. has been appointed head physician to the Hôpital de la Charité. Orders have been issued by the authorities for the immediate extension of the cemetery of Montparnasse" (p. 198). The graver note is not wanting. Readers of Daudet's 'Le Nabab' will be gratified at finding (pp. 62-68) a just tribute to the Duc de Morny, whom his erstwhile secretary unkindly traduced; and a number of passages on Lamartine's career show a right appreciation of the political idealism underlying the apparently wayward acts of the patriot poet.

Altogether, the work of editing has been skilfully done, for the dull pages are few; but the misprints are almost unpardonably thick.

How to Judge Architecture: A Popular Guide to the Appreciation of Buildings. By Russell Sturgis. The Baker & Taylor Co. Pp. 221. Sixty-four half-tone plates from photographs.

Of the group of men who in this coun-

try devote themselves chiefly to writing about architecture, Mr. Russell Sturgis is easily the first. Whether he be judged by the volume of his production, by the extent and exactness of his information, or by his facility of expression, he has no equal. It is therefore a welcome thing that he should have undertaken to assist the layman to a better understanding of the qualities that raise building into the domain of the fine arts. The title that the author (or more probably the publisher) has chosen for the book in which this attempt is made is by no means fortunate, in that it seems to hold a promise that one who reads the book will thereby have qualified himself to estimate the merits of a work of architecture. The sub-title speaks more truthfully; and the author hastens to tell us on the first page that—

"The only opinions, or impressions, or comparative appreciations, that are worth anything to the reader are those which he will form gradually for himself. He will form them slowly, if he be wise; indeed, if he have the gift of artistic appreciation at all, he will soon learn to form them slowly. He will, moreover, hold them lightly even when formed; remembering that, in a subject on which opinions differ so very widely at any one time, and have differed so much more widely if one epoch be compared with another, there can be no such thing as a final judgment."

It is good, therefore, to have the implication of the title explicitly set aside by the author, in a statement that the object of his book "is to help the reader to acquire, little by little, such an independent knowledge of the essential characteristics of good buildings, and also such a sense of the possible differences of opinion concerning inessentials, that he will always enjoy the sight, the memory, or the study of a noble structure without undue anxiety whether he is right or wrong."

Although Mr. Sturgis disclaims in good set terms any intention of making his book a history of architecture, however brief, he does as a matter of fact treat his subject in a series of essays, each one dealing with some important period, and together extending from Greece in the fifth century B. C. to France, England, and America at the present time. For the most part, he seizes firmly and brings out clearly what was essential to and characteristic of each epoch, and no intelligent person can read the book without having his knowledge broadened and his thought stimulated. Few can be found to dissent from the opinions which Mr. Sturgis expresses in regard to buildings of an earlier period; but when he comes to pass judgment upon the work of the nineteenth century, the fact that his ideas are in many ways at variance with those of others perhaps equally capable of reaching just conclusions, points afresh to the well-known liability to error in contemporary judgment of the fine arts.

The Inside History of the Carnegie Steel Co. By James Howard Bridge. New York: The Aldine Book Co. 1903.

Whatever may be thought of the tone and obvious animus of Mr. Bridge's story, he has certainly succeeded in making it interesting. The growth of this gigantic business from Andrew Kloman's little forge of 1858 is not lacking in the element of romance, and Mr. Bridge states fairly enough the causes and methods that led to its wonderful development. He declined to submit his manuscript for revision to the officers of the Carnegie Company, but there is no reason for doubting the truth of his statements, which are, moreover, substantiated by a considerable amount of documentary evidence. His book has been in print some months, and, so far as we know, its general accuracy has not been disproved.

The animus against Mr. Carnegie personally seems to be based on Mr. Bridge's belief that at various times he dealt harshly and unjustly with his partners; that he displayed cowardice in virtually hiding in Scotland and leaving Mr. Frick to deal with the immense difficulties of the Homestead strike, which was largely due to Mr. Carnegie's expressed opinions about labor; and, finally, that he has a way of claiming the honor of having done many things which, as a matter of fact, were done by others. These things have been discussed from time to time in the daily press and are no longer of much consequence. There is, however, one question on which this book throws some light, and which is of interest to a multitude of people at the present moment, and that is the value of the stocks of the United States Steel Corporation.

The pertinent facts in this connection are as follows: In January, 1899, the whole property of the Carnegie Steel Company, including a quarter interest in the Frick Coke Company, was offered to a syndicate for $250,000,000, and the offer was declined. Up to March, 1900, the capital and surplus of the company stood on the books at $81,000,000. In that month the quarrel between Mr. Carnegie and Mr. Frick was adjusted; the Carnegie Steel Company and the Frick Coke Company were both absorbed by the Carnegie Company, which issued $320,000,000 of stock and bonds to the shareholders in the old companies. In March, 1901, the United States Steel Corporation took up these $320,000,000 of securities and paid therefor $304,000,000 in first-mortgage bonds, $98,000,000 in preferred stock, and $90,000,000 in common stock. The reason of this remarkable increase in valuations was that, owing to the boom in the steel business, the earnings had increased from $7,000,000 in 1897 to $21,000,000 in 1899 and $40,000,000 in 1900! The question that is now agitating the minds of the holders of United States Steel stocks is, whether these earnings were not extraordinary and exceptional, and whether it will not be found that the earnings of a series of years will fail to vindicate the judgment of those who negotiated the purchase of the Carnegie Company. Of course the same question arises in the cases of the other constituent companies, but it will not be forgotten that certain circumstances forced the hands of the buyers in the case of the Carnegie Company, and compelled them to pay what seemed to many good judges an excessive price for the property.

Flora of the Southeastern United States: Being descriptions of the seed-plants, ferns, and fern-allies, growing naturally in North Carolina, South Carolina, Georgia, Florida, Tennessee, Alabama, Mississippi, Arkansas, Louisiana, and the Indian Territory, and in Oklahoma and Texas east of the one-hundredth meridian. By John Kunkel Small, Ph.D., Curator of the Museum and Herbarium of the New York Botanical Garden. New York: Published by the Author. 1903.

This large octavo, of 1,370 pages and 12 pages of introductory analytical key, is offered to the public at a phenomenally low price, namely, $3.60. It is difficult to see how the author, who is also the publisher, can begin to recoup himself for the outlay on his enterprise. The territory here covered has never before been brought within the limits of a single botanical treatise. The excellent older local works (Elliott's, for example) have long been inaccessible, and most of them were practically useless outside their restricted range. The more general work by Dr. Chapman was found of such value by amateur and professional botanists that it has made its way to a second edition; but there has been felt a great need of a work covering a wider field than even this. Dr. Small has endeavored to supply this need. How well this has been done, it is impossible to tell without a careful employment of the treatise in a large number of cases, both in the field and in the study. It is certain that the volume has received a large amount of diligent attention, and it is likely to prove a valuable addition to our means of becoming acquainted with the Southern flora.

Three peculiarities will strike every reader on even a casual perusal, namely, a dominant tendency to split up species almost indefinitely, a striving to disturb, even unnecessarily, a disturbed nomenclature, and, lastly, a fondness for introducing novelties simply because they are novelties. Many a progressive botanist, to say nothing of all the conservatives, will have shudder after shudder as he comes upon these unnecessary innovations. Most of them are of such a nature that they are likely to be very ephemeral, and at their passing will leave behind them only slight vestiges to remind one of the incorrect judgment of the author. But, in spite of these serious faults, the work is an important contribution to our American flora. Many of our older botanists will be reminded, as they turn over its pages, of the easy-going and useful class-book of Professor Alphonso Wood, which helped so many persons to a knowledge of our Northern plants. Some of the keys to the more perplexing groups in Dr. Small's volume have a suggestive resemblance to the keys which enriched that now almost forgotten book.

The Care of a House. By T. M. Clark. Macmillan. 1903. Pp. 283. Thirty-nine illustrations.

It is surprising how little the average householder knows of the shell about him. Does a faucet leak? The plumber must be sent for. Does a key refuse to turn? A carpenter must be brought in. As a rule, the putting on of a new washer or the readjustment of a striking-plate, the work of ten minutes or less, would have remedied the difficulty. But the simple anatomy of a compression cock or the fact that a door is likely to sag, are generally unknown, or at best hardly realized. It is to throw a light for the plain man upon the way his house is built and upon the appliances that are found in it, to describe the disorders to which they are subject and

the methods of preventing and curing such disorders, that this book is written. If his kitchen stove has gone awry, here he will find a dozen pages descriptive of its functions, its parts, its draughts, and its ailments. If his fireplace deluges the house with smoke, he may read (if that is any comfort to him) how it should have been constructed. Plumbing, as by right it should, takes up the larger part of the book. All the usual forms of apparatus are described, ordinary dangers are pointed out, and remedies for defects suggested. Troubles with plumbing are manifold; and if it leads to the avoidance of only a few of them, the perusal of Mr. Clark's chapters will be well repaid. It is not alone to the remedying of defects that the author directs his attention. Many of his pages are devoted to the care that should be given a house with a view to keeping it in good condition. Thus, the chapter upon paints and the care of woodwork is admirable, and will enable the man who has to repaint his house to approach the subject with a knowledge that will stand him in good stead.

Mr. Clark is an architect of high standing, well known for his books upon building construction and superintendence, intended for the man of technical training. In his present essay he has succeeded in putting what he has to say in such form that it may be understood by all.

EGYPT EXPLORATION FUND

Established in London in 1882

The Committee for the United States solicit subscriptions for the work of the present season, which will be conducted, as heretofore, under the personal direction of Professor W. M. FLINDERS PETRIE. Explorations are to be made in the pyramid field of Sakkara and at other neighboring sites. Every annual subscriber of five dollars or more will receive the Memoir of the Fund for the year, an illustrated quarto volume, describing the results of the year's work.

Græco-Roman Branch:—In this branch of the Fund Messrs. Grenfell and Flunt's remarkable discoveries of papyri have been made at Oxyrhynchus and in the Fayûm. It is highly important that this work should be continued, because of its great value to students of the Bible, the Greek and Roman classics, and life in ancient Egypt. Annual subscribers of five dollars or more to this branch of the Fund will receive Grenfell and Flunt's volume on the Papyri, instead of the Memoir mentioned above, if they specify that their subscription is for the Græco-Roman branch.

Archæological Survey of Egypt:—This branch of the Fund, under the direction of Mr. N. de G. Davies, is devoted to the copying of inscriptions and sculptures, from the monuments of Egypt. Annual subscribers of five dollars or more will receive an illustrated quarto volume describing the year's work in this branch, if they specify that their subscriptions are for the Archæological Survey.

For the Committee,
WILLIAM W. GOODWIN, Chairman.

Subscriptions should be addressed to the Secretary, J. Ellerton Lodge, 8 Beacon St., Boston, Mass.

A LAST WORD BEFORE CHRISTMAS — SCRIBNERS

HOAR — *TWO NOTABLE AUTOBIOGRAPHIES* — GORDON

AUTOBIOGRAPHY of SEVENTY YEARS

By Senator GEORGE F. HOAR

3d large Edition — ***In two volumes, with portrait. $7.50 net. (Postage additional)***

"A book which, considered as a contribution to the materials of American history, will rank with Benton's 'Thirty Years in the U. S. Senate' and Blaine's 'Twenty Years in Congress', is the Autobiography of Seventy Years, by George F. Hoar. From one point of view the narrative is decidedly superior to either of the works with which we have compared it. The author is not only a statesman, but also a scholar and a man of letters. It may be doubted whether any citizen who has played for an equal length of time an important part in American politics has possessed in an equal measure the gifts and the attainments that make an accomplished writer."—*N. Y. Sun.*

REMINISCENCES of the CIVIL WAR

By General JOHN B. GORDON

In one volume, with three portraits. $3.00 net. (Postage 23 cents) — *3d large Edition*

"There is not a page in the book which bears the stamp of prejudice, not a sentiment which can offend any honest man. 'It is a big, brainy, full-blooded, manly American story, passionately thrilled with a high spirit of American hopefulness."—*St. Paul Despatch.*

"His battle scenes are living pictures; his compact force of statement is remarkable."—*Boston Daily Advertiser.*

THE AUTHORITY ON ITS SUBJECT.

LONGMANS, GREEN, & CO.'S NEW BOOKS

The American Revolution
PART II

By the Right Hon. Sir GEORGE TREVELYAN, Bart., Author of "The Life and Letters of Lord Macaulay"; "The Early History of Charles James Fox," etc., etc. In two volumes. 8vo. Pages ix-344—xi-353. With three Maps. $5.00 *net*. By mail, $5.36.

". . . Sir George . . . has written not only the fairest account of the war ever penned by an English historian, but has brought to light a vast fund of new and interesting material. He has covered the British end of the story more thoroughly than any American writer, not even excepting John Fiske, and at the same time it is hard to realize that he is not a native of the United States, so vivid is his local color, and so fully do his judgments and sympathies tally with those of of our own best historians . . . a sound and able contribution to dignified history. . . ."
—RECORD-HERALD, Chicago.

". . . Sir George Trevelyan could not write a dull page if he tried. His genius for memoirs accompanies him in his study of the dryest facts and most complicated military details. Personal allusions, flashes of wit, and happy characterization bring to his history all the fascination of the most gossipy biography, while they give the clearest insight into the hidden springs of military and political movements. He writes memoirs in a paragraph and etches a mordant portrait in a phrase."
—NEW YORK DAILY TRIBUNE.

"We feel as we read his vivid and pregnant pages . . . that beneath the smooth and brilliant surface of his narrative there is an organic structure of knowledge well digested and of reading well assimilated. Readers of 'The Early History of Charles James Fox' are well acquainted with this gift which Sir George Trevelyan shares with his uncle. It is not less conspicuous, and it is perhaps still more skilfully displayed, on the larger canvas of 'The American Revolution.'. . ."
—TIMES, London.

"We may congratulate ourselves that it has been left to a British historian to produce the most adequate history of the American Revolution, a history which is free alike from the bombast of earlier American writers, and the hypercriticism and lack of sympathy of some of their modern successors. Sir George Trevelyan's historical manner, as we have said, is very nearly perfect." —SPECTATOR, London.

The American Revolution—Part I
8vo, $2.50 *net*. By mail, $2.70.

Works by D. A. Murray
Professor of Mathematics at Dalhousie College, Halifax; formerly Scholar and Fellow at Johns Hopkins University.

A First Course in Infinitesimal Calculus
Crown 8vo, 447 pages, $2.00 [*Just Ready*]

This book has been written for beginners. In it an attempt is made to describe and emphasize the fundamental principles of the subject in such a way that they may be clearly understood, firmly grasped, and applied intelligently by young students.

Not many examples involving a technical knowledge of engineering, physics, or chemistry have been inserted. For students who have but a minimum of time for this study, the essential articles for a short course are indicated.

An Introductory Course in Differential Equations. For Students in Classical and Engineering Colleges. Crown 8vo, 250 pp. $1.90.

Plane Trigonometry. For Colleges and Secondary Schools. Crown 8vo, pp. xiii-206, with a Protractor. Cloth, $0.90.

Logarithmic and Trigonometric Tables. Four and Five-Place. Crown 8vo, pp. 99. Cloth, $0.60.

Plane Trigonometry and Tables in one Volume. Crown 8vo, pp. 318. Cloth, $1.25.

EGYPT EXPLORATION FUND
Established in London in 1882

The Committee for the United States solicit subscriptions for the work of the present season, which will be conducted, as heretofore, under the personal direction of Professor W. M. FLINDERS PETRIE. Explorations are to be made in the pyramid field of Sakkara and at other neighboring sites. Every annual subscriber of five dollars or more will receive the Memoir of the Fund for the year, an illustrated quarto volume, describing the results of the year's work.

Græco-Roman Branch:—In this branch of the Fund Messrs. Grenfell and Flunt's remarkable discoveries of papyri have been made at Oxyrhynchus and in the Fayûm. It is highly important that this work should be continued, because of its great value to students of the Bible, the Greek and Roman classics, and life in ancient Egypt. Annual subscribers of five dollars or more to this branch of the Fund will receive Grenfell and Flunt's volume on the Papyri, instead of the Memoir mentioned above, if they specify that their subscription is for the Græco-Roman branch.

Archæological Survey of Egypt:—This branch of the Fund, under the direction of Mr. N. de G. Davies, is devoted to the copying of inscriptions and sculptures, from the monuments of Egypt. Annual subscribers of five dollars or more will receive an illustrated quarto volume describing the year's work in this branch, if they specify that their subscriptions are for the Archæological Survey.

For the Committee,
WILLIAM W. GOODWIN, Chairman.
Subscriptions should be addressed to the Secretary, J. Ellerton Lodge, 8 Beacon St., Boston, Mass.

Books on Scientific Socialism. Catalogue free. CHARLES H. KERR & CO., 56 Fifth Avenue, Chicago.

A Gift Worth Giving is the new edition of Webster's International Dictionary.

How to Judge Architecture
By RUSSELL STURGIS.

Large quarto, 84 Illustrations, net $1.50 (postage 14 cts.).

A popular guide to the appreciation of buildings, by the leading critic of art and architecture in the country.

The Nation.

NEW YORK, THURSDAY, DECEMBER 24, 1903.

The Week.

It is obvious that the Administration is now walking more warily along its perilous Isthmian path. Its first fondness for rushing into a belligerent policy, and then looking about to find law for it, has passed away. Take the case of the Colombians who are reported to have landed on an island in the waters of Panama. The old headlong way would have been to turn them out, bag and baggage. Now, it is said, they are to be politely asked to go away; but an' they will not, our naval commander is to sail off, thanking Heaven that he is rid of knaves. There is here a very shrewd test of the theory upon which the Administration has been acting. Its fantastic contention is that, in repelling Colombians from the territory of Panama by force, it was but proceeding under the treaty obligation to keep transit open. But how can Colombians on an island, miles away threaten to obstruct transit over the Isthmus? Evidently, the wise men at Washington cannot answer. So they pull themselves up. Their new and gratifying caution is a sign that they are finding out how unpopular a war with Colombia would be. There would be no more "glory" in it than in kicking a newsboy into the gutter.

"No sheep can bite me and live," said a soldier, who came into camp bringing the carcass of one on his back, after an order against plundering had been issued. In like spirit, Secretary Moody now says, "Let the Colombians take the initiative." The initiative in what? If the Secretary means war, it is too late for the Colombians to take it now, because we took it seven weeks ago. When we sent cruisers to the Isthmus to prevent the Colombians from suppressing insurrections in their own territory, we forestalled any claim they might ever make to the initiative. It is strictly our own, and we so affirm, despite the warning of Congressman Hitt that "every bitter and inflammatory thing said here at home against our Government's course toward Colombia is repeated and spread broadcast there, inflaming a people who are always ready for a disturbance." What a topsy-turvy state the Illinois Congressman is in! If the Executive gets the nation into a war by usurping power, then nobody must object to a glaring and dangerous infraction of the Constitution lest the enemy should be inflamed to the point of defending his rights.

Secretary Hay finds support for our new diplomacy in an alleged peculiarity of our Isthmian treaty of 1846. It was originally made with a country called New Grenada. "The name of New Grenada has passed away; its territory has been divided." But our treaty, he tells us, "is a covenant, as lawyers say, that runs with the land." At that division of New Grenada territory, it ran with the land to the new State called Colombia. Having thus early shown its ability to run, what more natural than this nimble treaty should run again? We are, indeed, left to infer that it has obligingly lowered its own previous record, in order to keep pace with our lightning diplomacy. The Secretary's account is repeated in the President's message: "The name of New Grenada has passed away and its territory has been divided." Yet, strange to say, one seeks in vain for confirmation of this alleged division of the territory of New Grenada. It is not mentioned in any historical work that we have been able to discover. The maps of South America in the '40s show a New Grenada identical in shape and size with the Colombia of 1903. Further, the records show that the change of name from New Grenada to Colombia was made by the new constitution adopted between 1861 and 1863. Except for some readjustment of boundaries between her and neighboring States, the State with which we made the treaty of 1846, guaranteeing her rights of sovereignty and property in the Isthmus, is the precise State which we have now deprived of her sovereignty and property there—the very State from which we derived whatever legal right we have to be there at all. The treaty never ran until the new diplomacy made it run.

The Assistant Secretary of State, Mr. Francis B. Loomis, has principally figured in the Panama farce-comedy hitherto as the actor who mistook his cue and rushed on the revolutionary stage several hours before there was a revolution. That telegram of his, signed "Loomis, Acting," was wittily used by Congressman Dinsmore to turn the laugh on the whole *bouffe* affair. Last week Mr. Loomis appeared in this city, and gave us another taste of his theatric quality. Speaking before the Quill Club, he unfolded a startling tale of the horrors that would have heaped on horror's head had not the President strained a treaty and violated precedent in his swift recognition of the Panama republic *pour rire*. Here we have at last the official version of that terrible "foreign complication" which drove the President to his rapid-fire recognition. If he had not acted on the instant, and if certain fell designs, which Mr. Loomis attributes to Colombia without a particle of proof adduced, had been carried out, we should have seen a French squadron bearing down upon the Isthmus; it might "easily have been followed by the ships of England and Holland," and there you would have had Panama turned into a Balkan State, which "might well have been expected to furnish the spark to set half of the world in flames." Nothing like a canal to quench that spark! So the "man in Washington who possessed insight," seized "the opportunity to strike a blow." According to Mr. Loomis, that one blow saved the whole world from coming to blows at Panama.

Interest in argument of counsel before the Supreme Court, in the Northern Securities appeal, has been greatest in the presentation by Mr. Johnson of the case for the Company, and of the Government's case by Attorney-General Knox. Mr. Johnson's line of defence may be concisely summarized as follows: First, as to restraint of trade. If there had been, in connection with the merger, any agreement to restrain competition between the two merged companies, then the case was ended and the merger proved illegal. But the purpose of the merger was, not to restrict, but to enlarge, create, and improve trade. Second, the form of merger is such that no agreement is involved, but merely sale of property by one set of persons to another; and bona-fide acquisition of property has never been held a contract or conspiracy in restraint of trade. The point on which the defence has throughout mainly rested is the plea of simple purchase of property by the Securities corporation. This, it will be recalled, is in line with Judge Lochren's opinion of last August, in the State of Minnesota versus the Northern Securities. On the other hand, one question was put by the court to Mr. Johnson, as pregnant as Justice Brown's famous query, a year and a half ago, whether, under the general scheme of merger, one person might not conceivably come to control all the railways of the country. Justice Brewer asked, on Monday, whether Mr. Johnson's argument would not justify merger of all our transcontinental railways. Counsel replied that if such combination were requisite to a larger trade, it would be legal.

The Attorney-General's argument rested mainly on the Supreme Court's own precedent of 1897. The Trans-Missouri Railway Association then pleaded that its agreement "for establishing and maintaining reasonable rates" was not intended for restraint of trade. The court ruled, however, that "the necessary

effect of the agreement was to restrain trade." Mr. Knox observed of this precedent:

> "I cannot think that a combination held together by a rope of sand comes within the prohibition of the law, and that one which is bound by links of steel may defy its wisdom and its power."

The particular device employed in combination, the Attorney-General contended, is a minor question; the real problem concerns the end accomplished. The end accomplished by the merger was, he argued, to destroy competition between the Northern Pacific and Great Northern, and this was in restraint of trade under previous decisions of the court. Answering the contention that decision against a securities-holding company would forbid corporations to do what individuals might do unchallenged, the Attorney-General pointed out that an individual may control only through owning more than half the stock; whereas, by using a company holding a bare majority of such shares, the same individuals might own half the stock of the holding company, and thus control the railways controlled by it, through virtual ownership of one-quarter only. Whatever the economic value of the combination movement as a whole, the form displayed in the Northern merger had, Mr. Knox asserted, no economic value whatsoever.

The fact which the annual report of the Interstate Commerce Commission brings out most clearly is that there has practically been an elimination of competition among the railroads. There has been a marked and general advance in transportation rates during the last three years, and the advances have usually, if not always, been the result of concerted action by the carriers. The Commission recalls the old theory that the adjustment of freight rates is a delicate matter, which could be dealt with only by people having a most intimate knowledge of conditions, and says that the advances of the last three years have not been made on that theory. They have not originated with the traffic representatives of the various systems, but "rather with the financial heads of those systems." If this means anything, it means that rates have been adjusted primarily in accordance with the needs of Wall Street. The Commission concedes that in some respects the cost of operation has been increased, but claims, on the other hand, that many economies have been introduced, and that the great increase in the amount of traffic has enabled railroads to handle it cheaper in proportion. In short, the report gives the lie to the loudly proclaimed assertions that the greater the unification of the railroads, the lower the scale of transportation charges. The Commission emphatically asserts that "this species of property now possesses the power to tax unjustly every species of property." When it talks about "insidious means" of taxing the many for the benefit of the few, it revives poignant memories of Wall Street in 1900 and 1901.

The complete Bristow report is interesting chiefly as further evidence of the wrongdoing of the dismissed employees, of the men now under indictment, and of Perry S. Heath, who should be rendering daily thanks for the statute of limitations. The large results of Mr. Bristow's investigation were indicated in the abstract recently issued. The full recital of the amazing diligence of Beavers and Machen in taking toll of every contract and payment that passed through their hands entitles them to a place among the great thieves of history. The report is crammed with significant touches. Beavers used to direct seekers for contracts to a clerk, H. Clayton Graff, "as the man to do business with"; and Graff would gravely explain that "none of us are here for our health. The Government is not liberal with salaries, and it costs much to live in Washington." Mr. Bristow simply emphasizes the fact that every day Heath remains secretary of the Republican National Committee means political capital for Democrats and losses for Republicans. Heath's iniquity was known when the Committee met week before last; the Committee, by tolerating him, has deliberately shouldered responsibility for him, and the party will be held accountable at the polls.

The report of Messrs. Conrad and Bonaparte on the so-called Tulloch charges contains more that is new and striking. They sustain Mr. Tulloch in all his main contentions. Of course, they find, as Mr. Bristow did, that Heath was one of the head devils; and, speaking as lawyers, they declare flatly that "suspicion of his personal integrity must be inevitably aroused." But, after the Bristow report, anything more to the discredit of Heath is throwing a perfume on the violet. The notable thing is the plain statement about the former Postmaster-General himself, Charles Emory Smith, who is directly accused of tolerating the practice of fraudulent employments after he had received notice of their existence. Mr. Smith, "notwithstanding repeated warnings," failed "to appreciate the gravity" of the misconduct of his subordinates, and "the consequent necessity for its prompt and adequate punishment." It may be added that Mr. Smith even now fails to appreciate the gravity of the case against him.

As an act of either generosity or justice, the grant of trade advantages to Cuba has been too long delayed to have a really fine moral flavor. A promise of humane treatment and fair dealing which it has taken the giver more than two years to make good is not a subject for him to wax complacent over. The immediate Cuban crisis long since passed. With an extraordinary power of endurance and recuperation, the Cubans pulled through the pinch of their industrial depression. Their own Government has been less extravagant than the temporary American rule. By a lucky upward turn in the world's price of sugar, their leading product afforded them a small margin of profit. Consequently, the reciprocity bill, which Congress finally passed on December 16, could no longer be urged as a measure demanded by an exigent situation. The arguments for it were rather political and economic than humanitarian, and it was a sure instinct which led the Democratic leader in the House to support the measure. He did his best to improve it, to make it broader and fairer; but, failing in that, he rallied his followers with the cry, "This is a break in their Chinese wall. Let us help them to make it, and trust to time and our own right arms to widen it." In the Senate, to be sure, the Democratic vote was largely against the bill. Some Democratic Senators, like Mr. Bailey, had legal and Constitutional objections; most of them, however, put the case bluntly on the ground of special interests which they represent and which they feared might take injury. Nevertheless, the fact remains that protection hated Cuban reciprocity, and tried to stave it off, but has at last had to acquiesce in it.

The new treaty between this country and China, which has just been unanimously ratified by the Senate, is a measure of exceptional importance. It firmly establishes our right to the most-favored-nation treatment, and points to the placing of our commercial affairs in the Empire on a more workable and profitable basis. The provisions that will command most attention are the abolition of the vexatious *likin*, and the opening of the Mantchurian ports of Mukden and Antung to American trade. The Chinese Government agrees to abolish the *likin* and all other transit dues, in return for which the United States consents to a surtax bringing the total import tax up to 12½ per cent., and limiting the export tariff to 7½ per cent. A tax of only 12½ per cent. shows how far China still is from any real conception of civilization. Contrast that beggarly tax with our Dingley schedules. As regards the Mantchurian ports, can China guarantee us equal rights there? Russia is in possession, and while she will probably not court an altercation with this country, she may pursue certain indirect methods of hampering our trade with the new ports. If, for instance, she should make our steamers pay twelve times the tonnage tax at Mantchurian ports that is paid by Rus-

sian craft, that would very nearly make waste paper of the treaty.

The conclusion of the purchase of the friars' lands in the Philippines will rank as the most signal achievement of Gov. Taft. It has been brought about, not by condemnation or other peremptory proceedings, but by direct negotiation with the owners. The Vatican had given its general sanction to the scheme, but in a case of this sort the details are the pith of the matter, and these had to be slowly and painfully arranged on the spot. How well this work has been done is shown in the purchase price, $7,250,000, which is less than two-thirds the sum originally demanded. The reason for this peaceful dispossession of the friars we have already discussed. Rightly or wrongly, they represented to the people the worst abuses of the Spanish domination; for they were the real rulers. That the transformation should be complete it was necessary that they should go. This view is quite compatible with such a belief in the piety and good intentions of the friars as Chaplain Chidwick expressed on Sunday night. Their unfortunate political activities had made them impossible, and Gov. Taft deserves the heartiest congratulations for arranging for their supersession by friendly purchase.

It is now evident that the secrecy which surrounds the inquiry into Gen. Wood's fitness for promotion relates only to the charges against him. Testimony in his favor may freely be published. Thus, we have had letters from Gen. Bliss and Col. Dudley setting forth what they did say before the Senate Committee, given out by consent of the War Department, and correcting erroneous press reports. Now it is Secretary Root who gives himself leave to print his defence of Gen. Wood at the very moment when the opponents of the medical general are denied publicity of any kind. The Secretary's tribute to his subordinate quotes, of course, from Gen. Wood's record while acting as a lieutenant in Arizona in 1886, and also from the official reports of his brief career as a colonel and brigade commander in the field. Mr. Root also contends that since the work of governing a captured province is frequently the duty of a general, Gen. Wood's services at Havana must be counted as a part of his purely military record. With this, we think, few army officers will agree. Still fewer will assent to the Secretary's assertion that no officer below the rank of major-general has "demonstrated to a higher degree the possession of qualities which fit a man to render valuable services to the country as major-general." It is true that Brig.-Gens. George M. Randall, J. Franklin Bell, Theodore J. Wint, Jesse M. Lee, Francis Moore, and Tasker H. Bliss have not had such spectacular commands as Gen. Wood, but this is because there was only one Cuba on our hands. It is, of course, hard luck that four of these were fighting in the civil war when Wood was a mewling infant, and that all are trained officers of long experience; but then not every one can be medical officer to the White House on the outbreak of war, and so let his light shine where it will do the most good.

The four appointments announced by Mayor-elect McClellan on Monday must dash the hopes of those who thought that in some mysterious way Tammany Hall might be uplifted by its latest figurehead. Crain, Keenan, Lantry, and Hayes, like Delany, whose selection was announced last week, are of the old guard of the Wigwam. It is true that there are worse men in Tammany Hall. Mr. Jerome, for instance, publicly praised Patrick Keenan for keeping away from the grafters and the upholders of red-light conditions; but at the same time he spoke of the present rulers of the Hall as hounds who would leap out of the windows should Croker enter and snap his jaws. Keenan has been an officeholder before, having graduated in true Tammany style from a liquor saloon into the Board of Aldermen from the old Eleventh Ward, but in 1880 he was forced out of the organization. After some years of rebellion and service as county clerk on an anti-Tammany ticket, he returned to the fold in 1890, and has since been a model of loyalty. Crain is an "orator" of considerable ability and education, which he has put to bad uses in defence of Tammany Hall. Since he is to have charge of the important Tenement House Department, we may at least be thankful that he is not a Sheehan or a "Mike" Murphy. This new Commissioner was appointed City Chamberlain by Mayor Grant, after having been the Mayor's private secretary, to succeed no less a person than Richard Croker. Francis J. Lantry, who goes back to the position of Commissioner of Correction, which he filled none too well under Van Wyck, is a typical Tammany officeholder. Nicholas J. Hayes, the new Fire Commissioner, who is now Deputy City Clerk, has risen in the regular Tammany Hall way to a district leadership. There is nothing about him or his past which would seem to mark him as a man suitable for so important a position.

By a noteworthy inversion, Mr. Chamberlain's Imperialism has now resulted in an *imperium in imperio* which threatens the existence of his party. It was plain to all disinterested observers that from the moment of the Birmingham speech he had made—following Dante's example—"a party of himself." The logic of the situation soon forced him to a secession, friendly in form, but practically disastrous to Unionism. Meanwhile, the Tariff Reform League quickly put at his command the usual political machinery, and now, by the appointment of an expert commission on the fiscal question, he virtually sets up as a Government. Since the commission is to frame the legislation which will revolutionize the finances and trade policy of the Empire, it obviously leaves to the real Government—if Mr. Balfour's Ministry still deserves the name—chiefly such parochialisms as the maintenance of the army, fleet, and schools. Of course, Mr. Chamberlain's relay Government lacks certain appurtenances: it cannot, for instance, issue Blue Books, and it will not have to resign even if its bill be defeated in Parliament. But there are other colors than blue, and the evasion of Parliamentary responsibility may be deemed an advantage. What Mr. Balfour's Government will do with the bill that Mr. Chamberlain's Government presents is a problem interesting alike to students of constitutional law and of human nature. Certainly, Mr. Balfour would be excusable if he should cease from placarding his abiding friendship for his former colleague. For it is Mr. Chamberlain and his Ministry who are to have the pleasure of playing ducks and drakes with British finance, while it is apparently Mr. Balfour who is to endure such necessary Parliamentary hardships as the measure may entail. Obviously, it is not Joe who stands to get left in this division of labor.

Premier Combes has no sooner got the alleged disloyal orders suppressed than he introduces a bill requiring all the religious orders—as companies or individuals—to desist within five years from teaching in France. The act applies impartially to primary and secondary education. This means the closing of more than three thousand schools, and naturally the extension of Government school facilities to accommodate the pupils of religious institutions. It should be observed that this wholesale proscription does not technically affect the rights of the secular clergy. But, practically, there are no parish schools in France; school teaching is in the hands of the orders, and the proposed law is definitely an attempt to deny the right of teaching to the Roman Catholic Church. In another aspect the law is an assertion of a State monopoly in education. On the theory lately set forth by the publicist Clémenceau, who asserts that no one can be loyal to both the Pope and the Republic, such action would be highly logical; but in that case the Catholic Church must be regarded as the enemy of France always and everywhere. Such undoubtedly is M. Combes's view. To carry it out consistently, the Concordat should next be abolished, and that, indeed, is to be expected if anti-clericalism continues to be the ruling political force at the Palais Bourbon.

SENATOR HOAR AND THE PRESIDENT.

Seven weeks ago Senator Hoar was rebuking the *Evening Post* for attacking the President's Panama policy without full information. On Thursday he was rebuked by Senator Foraker for doing the same thing. The *Evening Post*, said the Massachusetts Senator in November, had "gone off half-cock." Yet he himself, going off full-cock in December, takes exactly the same position that that journal held from the first. But these are only amusing trifles. We know how galling it is to Senator Hoar to agree with the *Evening Post*, or to be supported by it, but agreement with him is sometimes inevitable—when he is right; and he has now performed a great public service, far beyond the power of any newspaper. He has, from his position in the Senate, gained the ear of the country with his plea for law and morals.

Objection to the President's course can no longer be put by as the work of chronic snarlers and cantankerous sentimentalists who are Democrats in disguise. Here is the most eminent Republican Senator, who would not abandon his party though it were to slay him—an able lawyer, chairman of the Judiciary Committee—who rises to inform the Senate and the nation that the President's action has been both brutal and illegal. Of course, Mr. Hoar puts the case hypothetically. He virtuously (or slyly) assumes that Mr. Roosevelt could justify his ways to man if he would only tell the whole truth. It is simply on the face of the official dispatches thus far made public that Senator Hoar condemns him. Yet this is plainly nothing but an empty formality—the Mark Antony way of saying "honorable man." How can any Executive explanation do away with the orders actually given our naval commanders before this wonderful revolution? Those orders, declares Senator Hoar, were an act of war against a friendly country. Such they undoubtedly were, tried by any test, legal or moral; and the President's pretence of a solemn obligation to "keep the peace" on the Isthmus, translated as it was into deeds without the semblance of fair play or warrant of law, Mr. Hoar aptly characterizes. Mr. Roosevelt's attitude, asserts this survivor of the Puritans, was that of a "mighty policeman" who "manacled the arms of the attacked, leaving the assailant free, and then instantly proceeded to secure from the assailant the pocketbook of the victim, on the ground that he was the de-facto owner." That will do, coming from the President of the Harvard Alumni, and addressed to Harvard's strenuous son.

Senator Foraker's protest against Mr. Hoar's sensational speech was, in effect, a declaration that the people are not capable of passing judgment on such high matters. He was appalled at the thought of all this being "given to the country." Why could not indiscreet Senator Hoar have cleansed his bosom of all that perilous stuff in secret session? Senators, of course, were fitted to discuss these complex questions of law and morality, but Foraker was aghast at the idea of uninstructed editors and clergymen and professors all over the land debating matters entirely above their feeble comprehension. The mischief, however, is done. Senator Hoar has fired a shot that will be heard round the world. Horrible as it may seem to Senator Foraker and to the Administration, the whole question is up and the whole question is open. Americans are actually wanting to know whether their rulers have had a proper regard for law and right, and whether they have been careless of the country's good name, making us appear to the world in the light of sharpers and filibusters.

Washington dispatches friendly to the President variously represent him as "amazed," "pained," and "indignant" at Senator Hoar's speech. Such a portent is it for a leading Republican to lift up his voice for justice and the law! Mr. Roosevelt is said to be particularly apprehensive about the effect of the speech "abroad." He seems to fear that foreigners will for the first time find out that his Panama alacrity was highly suspicious. As if they had not all the while spoken of it with their tongues in their cheeks! Then there is the familiar old fear lest the expression of a moral sentiment in this country should compel the President to kill somebody in another. Those ignorant and credulous Colombians might take it into their heads that Americans in general care as much about the proprieties and the legalities as Senator Hoar does, and then, of course, by the severe logic of Imperialism, President Roosevelt would have to invade their territory and shoot a lot of them. All this fluttering simply shows how hard the Administration has been hit. Moral reproaches it could smile at, but apparently it is even going to lose its treaty. The danger is, of course, that in this state of alarm and anger the President may seek to escape the consequences of one rash act by essaying another. But we earnestly hope that he will have the good sense to reject desperate counsels to get up a little war, or to build the canal anyway, or to annex Panama, and will see his path of safety and of honor in careful observance of the law and of good faith.

It is high time that Americans should recall to their minds the elementary rules of international propriety. They have been violated, in all this business, with the utmost effrontery. Not the least indecent disregard of what is fit and obligatory has been shown by the mushroom Minister of a mushroom republic, M. Bunau-Varilla. He made a speech in Philadelphia on Thursday, and submitted to a newspaper interview afterwards, in which he most offensively interfered in what is purely a domestic matter. He denounced those who spoke up for justice to Colombia or were against the Panama treaty, and acted in all ways as if his quality of foreigner and diplomat laid no embargo whatever on his utterance. We must tell him that Washington sent Genet out of the country for just such impertinent meddling. This stockholder in the Panama Canal Company, who got himself made Minister and then negotiated a treaty to buy his own property, ought to get a civil but decided intimation from the State Department that we will not allow him to lobby, or loose his too eloquent tongue, in behalf of legislation before Congress. M. Bunau-Varilla might perhaps plead that all rules were being set aside by this stirring Administration, and that no impropriety really mattered. But Senator Hoar's speech is one sign that the period of happy-go-lucky, go-as-you-please conduct in international affairs of the greatest moment is about ended, and that we are going sharply to revert to the old questions, "What does precedent demand? What does the law require?"

THE INJURY TO MR. HAY.

One of the most unfortunate results of our Panama diplomacy is the damage it has done to the reputation of Secretary Hay. His prestige has been a matter of legitimate national pride. Not only by skill and address, but by pursuing policies at once humane and honorable, had he won fame abroad as well as admiration at home. His exemplary patience when the first Hay-Pauncefote treaty was defeated by American Jingoes, headed by Mr. Roosevelt, implied that he had that first of diplomatic virtues, the ability to say, "I can wait." But the rash and lawless course which the Administration, with Mr. Hay's advice or, at least, consent, has adopted in the Isthmian canal affair operates gravely to his injury.

The fundamental vice of our Colombian diplomacy is revealed afresh in the correspondence made public on Saturday. Apparently, neither President Roosevelt nor Secretary Hay thought Colombia entitled to her rights under international law. They never dreamed of treating her as an equal. They addressed demands to her which, if made to us by any other Power, we should have rightly regarded as a deep insult. Read the offensive dispatch which Mr. Hay sent on June 9. It stated that the rejection of the treaty would "seriously compromise the friendly understanding between the two countries," and might lead to action by Congress "which every friend of Colombia would regret." What right had the Secretary to say that? How could it be maintained that the Constitutional action of the Colombian

Senate in rejecting one of Mr. Hay's treaties was any more unfriendly than the similar action of the United States Senate in rejecting several of them? Clearly, Secretary Hay would never have thought of making so thinly veiled a threat to France. He would not have endured it for an instant coming from England. Lord Lansdowne might, with as good warrant, have insisted that our Senate confirm the Hay-Pauncefote treaty. That was sought by us as directly as the canal treaty was by Colombia. Mr. Hay makes much of the fact that "negotiations were instituted by Colombia." The Hay-Pauncefote treaty was instituted by us. Indeed, it was publicly stated that Mr. Hay was allowed to write it just as he pleased. Yet the British Foreign Office never thought of reproaching or threatening our Government on that account. We demand the treatment of an equal, but do not accord it to Colombia, though by law and treaty it should be hers.

We can easily conceive that the case was badly botched by Minister Beaupré. He appears to have passed on Secretary Hay's instructions in the baldest form; and telegraphed that they made a "sensation" in the Colombian Senate, where they were "construed as a threat of direct retaliation." Probably Mr. Hay did not intend the thing to be done thus crudely; but his own original position is untenable. If the rejection of a treaty by the duly constituted authorities is an unfriendly act, the United States would be the chief of sinners. Look at the Hay-Bond treaty respecting Newfoundland. Senator Lodge not only has it contumeliously set aside in one Senate and pigeon-holed in the next; he puts his son-in-law, Representative Gardner, to railing at it in the House and to accusing its negotiator—Secretary Hay himself—of having been cheated into accepting a "gold-brick" treaty. But can Newfoundland allege that the insult is directed at her, and not merely at Mr. Hay?

The latest correspondence only makes the Panama case appear worse. It shows that the Administration was prepared to ignore Colombian sentiment and to trample upon Colombian rights. And as for what this Government actually did in connection with the Panama revolution, the dispatches now published are either irrelevant or further inculpatory. To show that we were long aware of trouble brewing, is a queer way of excusing us for acting with gross impropriety when it came. It does not leave us even the pretext of having been taken by surprise. Nothing that has yet seen the light can explain or defend the orders to our naval commanders, two days before the revolution, to prevent Colombia from suppressing it. That, as Senator Hoar maintained from his place in the Senate, was nothing less than an act of war, authority for which the President possesses neither in sound policy nor in the Constitution and laws which he is sworn to uphold. Besides being a diplomatic blunder, it was an open usurpation of power.

All this, we say, came with a shock to the best friends of Secretary Hay, and must prove a detriment to his fair fame. Nowhere has his sagacious and humane statesmanship been held in higher esteem than in England. But what are Englishmen saying now of the policy in which he has made himself *particeps?* The influential organs of English opinion express that verdict of posterity which is proverbially to be sought in the judgment of friendly and intelligent foreigners. The *Speaker*, the Liberal weekly, says that the Administration was guilty of "an act of brigandage" in Panama, and adds that "the United States has shaken the confidence of the civilized world in her honesty." It is the opinion of the *Scotsman* that Colombia has been "at the same time plundered and mocked." Says the Glasgow *Herald*, "Expediency has been stronger than morality." In the Manchester *Guardian* we read: "The United States Government, coveting the canal territory and unable to control it by treaty, has torn it off from Colombia by force." Our Panama diplomacy is called by the *Daily Graphic* "a very disagreeable page of American history." The *Globe* speaks of the "underground manœuvring of President Roosevelt and Mr. Hay." Our course at Panama was, says the *Daily News*, in "complete disregard for the opinion of the civilized world." We could make many more citations to the same effect from representative and powerful English newspapers. Enough has been adduced, however, to show that the Colombian diplomacy for which Secretary Hay has made himself responsible incurs the condemnation of our well-wishers abroad. The result is, unhappily, not only a diminution of his own repute, but a tarnishing of his country's good name.

A SOCIAL PROBLEM IN BALTIMORE.

It is in the nature of race prejudice to give rise to incidents that intensify and sometimes appear to justify it. An illustration of this is to be found in some recent incidents in Baltimore. In some sections of that city the white residents and property holders are much irritated at the gradual spread of the negro population into sections in which, a few years ago, none of them resided. In 1880 there were 53,716 negroes in Baltimore City. Twenty years later there were 79,258—an increase of 25,542, or at the rate of something more than 47 per cent. It is true that in the same time the white population increased 150,634, or at the rate of 54 per cent., so that the proportion of negroes to the total population of the city is now somewhat less than it was twenty years ago. Nevertheless, there has been an absolute increase of upwards of 25,000 in the negro population. This means that perhaps 3,500 more dwellings in Baltimore are now occupied by the negroes than was the case in 1880.

In Baltimore, negroes are seldom the first occupants of new houses. The small houses of the kind which they would be most likely to buy or rent are usually put up in long rows or blocks. It rarely happens that enough negroes can be found able and willing to buy or rent all the houses of one of these rows. The builder would not dare to sell some of them to or for negroes unless he were sure that he would be able to sell all for the same purpose, because he could escape having the remaining houses left on his hands only by selling them far below the cost of erection. In large part the increased housing needed by the largely augmented negro population of the city has been supplied by turning over to them residences once occupied by whites. This process has entailed on many white people large pecuniary loss. It has annoyed and irritated a still greater number of persons who, perhaps, did not lose any money by it.

For thirty years now the real-estate market in Baltimore, and especially that portion of it which concerns itself with moderate-sized houses, has been in an unsatisfactory state. No matter with what judgment one might buy such property, if he held it for a few years he was almost certain to lose money. It follows that it has been exceedingly difficult, when one was forced to sell such property, to part with it except at a very heavy loss. The increase in the standard of comfort among a portion, at least, of the negro population resulting from the increased education and culture of some of them, has made them wish for their children and themselves better surroundings, physical and moral, than can usually be found in the typical negro quarter. These persons are on the lookout for residences which they can afford, and which will, if not give them the surroundings they would like, at least free them in part from some very objectionable associations. In a neighborhood in which values are declining, as in most parts of Baltimore they are, it is easy for such persons to obtain by purchase or rent from the necessity or cupidity of a property owner who finds his property tenantless on his hands, the kind of house they want; because, wanting it, they will frequently pay more than a reliable white tenant will. The very moment the new occupant moves in, there is a commotion in the neighborhood. His coming means at once a large money loss to all the other property owners in the immediate vicinity. He and his family may be quite well-behaved people who give their neighbors no trouble of any kind; perhaps

the first negroes to come into a white community are usually of this class. Nevertheless, many of the white neighbors feel themselves insulted and more or less outraged by his advent. If they are tenants, they at once begin preparations for moving, and they do move at the first reasonable opportunity. If they own the property, they try to sell it. As an inevitable consequence, the value of houses rapidly declines. As the whites move out, more and more negroes come in, because no one else who will pay any reasonable rent will take a house in a block in which there are negro residents. Every white man who moves, and every white man whose property has become less valuable, ascribes all his inconvenience and all his loss to the negroes, although it often happens that they have been only partly responsible; the decline in value having made large progress before any negroes appeared in the neighborhood. Such an experience is likely to create prejudice where little of it existed, and to fan to a higher heat that which had been previously entertained. Men are never disposed to view kindly or judge justly the acts of others which they believe to have caused them to lose money.

Thirty years ago, outside of a few alleys, there were scarcely any negroes in the section of Baltimore city bounded on the south by Biddle Street, on the west by Argyle Avenue, on the east by Druid Hill Avenue, and on the north by North Avenue. This region extends about a quarter of a mile from east to west and a mile north and south. Now the negro population is very possibly in the majority in the entire district. It is still gaining upon the whites very rapidly. There can be but little question that this spread of the negro population into what had been previously white neighborhoods has had an appreciable political as well as social effect. The pity of it all is that, starting with the existence of a dislike among a considerable proportion of the whites to living in a neighborhood in which any negroes dwell, all the other consequences follow automatically, so to speak; and follow without anybody, black or white, being to blame for them.

All sorts of difficult and irritating problems are created by these changes in the character of the population. For example: some twenty-five years ago a public-school building was erected for white children in what was then practically an exclusively white neighborhood. It was one of the best school buildings that up to that time had been erected in Baltimore, perhaps because the class of white children then attending it were used in their homes to a higher degree of comfort than was the case in most other sections of the city. In the last ten years the negroes have gradually moved into the vicinity of this school, and now very nearly surround it. The attendance at the school, which used to be large, has fallen off greatly and steadily. As a consequence, it can now accommodate many more pupils than desire to attend it. On the other hand, there is a shortage in the accommodations for colored children in the neighborhood. The School Board last spring accordingly announced that it would close the school as a white school and open it in the fall for colored children. This seemed to be a common-sense decision, and to be all the more wise because part of the falling off in the enrolment and attendance of white pupils was unquestionably due to the dislike of parents to send their children to a school around which the negro population was so numerous. The moment the decision of the School Board was announced, however, there was a bitter protest. The negro population had, as already stated, almost surrounded the school building; they had not quite done so. Some of the white property owners still occupied their houses. Some white churches and institutions still remained in the vicinity. They have been struggling against what may be called the inroads of the black sea for years, and that their struggles thus far have been unsuccessful only made it to them the harder that the School Board should take sides with the invaders. So much feeling was aroused on the question that the School Board reconsidered its action and announced that the white school would be continued. It gave notice, however, that the proposed action had been only postponed unless experience should demonstrate that there were enough white children to attend the school to make it worth while to continue it. Confident assertions were made by the white neighbors that there would be no trouble on this score, circulars were distributed in the vicinity urging white parents to send their children to this school. Nevertheless, the attendance this year is smaller than it was last.

A NEW INTRUSION OF PEDANTRY.

It needs a strong hand now and then to smite those Philistines of the schools whom we call pedants, and such a hand Mr. Trevelyan, the eminent biographer and historian, has raised in defence of the finer aspects of his art. In an inaugural address, delivered just a year ago at Cambridge University, Professor Bury asserted roundly that history is a science, not an art, and that the imagination and the emotions have no concern in its writing. If he relented at all in this austere rejection of the graces, it was only in favor of "generations very remote":

> "The gathering of materials, he declares, bearing upon minute local events, the collation of MSS. and the registry of their small variations, the patient drudgery in archives of states and municipalities, all the microscopic research that is carried on by armies of toiling students—it may seem like the bearing of mortar and bricks to the site of a building which has hardlly been begun, of whose plan the laborers know but little. This work, the hewing of wood and the drawing of water, has to be done in faith—in the faith that a complete assemblage of the smallest facts of human history will tell in the end. The labor is performed for posterity."

Against this promulgation of the new school, Mr. Trevelyan has protested vigorously in the *Independent Review*, showing with admirable persuasiveness that the labor of sifting evidence and establishing facts is only the beginning of the student's task, and that no generation can safely forego the real objects of history—which are, as he thinks, to teach political wisdom, to restore our heritage in the ideals of the past and the lives of the noble dead, and to awaken a feeling for the poetry of time.

We could wish that some champion of the finer scholarship, as Mr. Trevelyan sees it, might arise in this country and smite hip and thigh the pedants who are fast bringing the study of history into the same disrepute among men of the world as that into which the classical languages have long since fallen at the hands of our learned philologians. The root of the disease lies in a misapprehension of the term science—in a sort of hypnotic spell which this word has cast over the minds of all who practise in the profession of knowledge and wisdom. To suppose there can be a science of history in any sense corresponding to the science of material phenomena, is merely to bow down before the many-tongued idols of the marketplace. Truth is the aim of the historian, as it is of the scientist—as it is of the poet even; but it has not yet appeared that the only road to historic truth is by the "town-pump" method of instruction, as the cynical have denominated the pedantry of our schools. Unless history recreates the life of a past age, with all the passions and aspirations of that bygone world at play, it is not easy to perceive what profit arises from its pursuit. Accurate sifting of documents and weighing of evidence is necessary, but to stop there, as Professor Bury demands and as too many of our college men do in practice, is to harrow the soil without planting the seed; more than that, it is to waive the one instrument at our service for controlling the traditions and documents that descend to us. Human passion was the source and formal cause of that life, and only by passion can its meaning be brought back to us of the present. "Men act from passion," Hazlitt wrote, "and we can only judge of passion from sympathy. Persons of the dry and husky class above spoken of often seem to think even nature itself an interloper on their flimsy theories." And again: "Passion, in short, is the essence, the chief ingredient in moral truth, and the warmth of passion is sure to kindle the light of imagination on the objects around it."

There may seem something startling in this setting up of passion as the discoverer of historic truth; and yet, if the matter be examined into, it will be found that the historian whose works endure and whose portrayal of a certain period has gained the common approval of readers, has almost invariably written, not coldly and pedantically, but with strong forejudgment. His absorbing feeling kindles the imagination; by it he is able to comprehend the other human impulses at work as no cold registrar of documents can conceive them; and in reading his works it is perfectly easy to bear in mind that "personal equation" which is easily discounted since it is unconcealed. In this way, Carlyle discovered and gave to the world the character of Cromwell —by passion. In this way, to name no other instance, Tacitus presented a picture of the Roman Empire, whose fundamental truth no mere maker of themes can shake, and whose exaggerations the reader can readily account for; he has made the age forever alive and forever a lesson to the world.

Now, it is needless to say that passion in the writer of history does not mean any deliberate coloring of the truth, and it is equally needless to say that passion has no place at all in the pursuit of science. The error of Professor Bury and of the growing school he represents is the same error that vitiates so much that comes from pulpit and desk—the failure to perceive distinctions. True science has her own glory, from which no caviller may detract. This science falsely so called is no better than a parody and a stale imitation. Even if historic truth were to be found within the limitations set by Professor Bury, where were the profit? It still holds good of such pedantry—

> "That truth itself is in her head as dull
> And useless as a candle in a skull."

The peril of allowing restrictions of this sort to creep into any field of university work is too serious to be ignored by those who have the really higher education at heart.

THE HEARING IN THE NORTHERN SECURITIES CASE.

WASHINGTON, December 19, 1903.

It has been current talk among lawyers and public men in Washington for the past few days that no case has come before the Supreme Court of the United States since the Dred Scott decision fraught with graver consequences than that of the appeal of the Northern Securities Company against the United States, which was argued on Monday and Tuesday last. The present generation has not witnessed a deeper interest evinced at a hearing before this tribunal. True, there was intense concern manifested at the argument of the Income Tax cases. The bar upon that occasion was crowded, and every available seat and standing-place outside of the bar was occupied, when Mr. Choate delivered his great argument, and Attorney-General Olney, with consummate ability, presented the views of the Government. Most of the audience then in attendance were well-to-do people, to whom the prospect of a tax upon income rendered the hearing of critical import to the individual pocket. But the Income Tax question, though coming home to a considerable fraction of the people, did not begin to embody so large a principle as that now at stake in the Northern Securities case. It was a burning political question, to be sure; but it lay within limits comparatively narrow. The issues involved in this week's legal battle go to the very foundation of our business prosperity, and reach the home of every workingman no less than that of every investor of capital.

The case had been set for Monday, December 14. All the Justices were in their seats, with the exception of Mr. Justice Brown, unfortunately kept at home by an affection of the eyes. Although thus disabled from listening to the argument, it was agreed by the parties that he should sit in the case. The briefs of counsel and the oral arguments in printed form will be submitted to him. By noon, when the justices came in, the courtroom was crowded to its utmost capacity. Several Senators were present, among them Nelson of Minnesota, Burrows of Michigan, and Fairbanks of Indiana; and a few Representatives, conspicuous among whom was Littlefield of Maine. Judge Morrow, of the United States Circuit Court for the California District, sat within the bar.

At the north table in front sat Attorney-General Knox, clean-cut, smooth-faced, and looking as though he felt the responsibility of the position and was ready to do his full duty. The Solicitor-General was present during the entire hearing, but took no part. Next to the Attorney-General sat William A. Day, an Assistant-Attorney-General appointed specially to prepare the Trust cases. Day was formerly an Auditor of the Treasury under Cleveland, and lately has practised almost exclusively before the Interstate Commission. Mr. Russell, another Assistant from the Department of Justice, was on hand. That brilliant young attorney, James M. Beck, who, while Assistant-Attorney-General, argued the cause before the Circuit Court of St. Louis, was in attendance. To-day, in a Wall Street law firm, he sees something of business operations from the capitalist's point of view.

The counsel for the Northern Securities Company were grouped at the other table. Mr. John Johnson of Philadelphia, justly esteemed the leader of the bar, is a tall, finely built, powerful man, with a strong yet kindly face. Next to him sat George B. Young of St. Paul. Years ago for a brief period he was a judge of the Supreme Court of Minnesota; to-day he is known throughout the Northwest as a student and lawyer of the highest rank. He has an intellectual cast of countenance. Next to him sat C. W. Bunn, also of St. Paul, an able and experienced railway lawyer. Mr. M. D. Grover, counsel for the Great Northern, and John W. Griggs, ex-Attorney-General of the United States, were also in line. Francis L. Stetson of New York, George R. Peck of Chicago, and William P. Clough were seated near the counsel for the companies. These gentlemen, together with one or two others well known in the profession, presented a firm front of experienced and able corporation counsel. In truth, Mr. John Johnson might well have been considered a host in himself. His generous stature, as contrasted with the trim, dapper figure of the Attorney-General, must have suggested to the mind of more than one spectator that the gamy champion of the Government was going forth like David to battle.

The "plain people" had well discerned the meaning of the contest, for they had poured into the courtroom and stood there in a solid mass behind the bar. A fair number of ladies were also to be seen. Mrs. Roosevelt, with Mrs. Knox, Mrs. Justice Holmes, Mrs. Senator Lodge, and others well known in Washington society, paid undivided attention to what was going on. A large proportion of the members of the bar, it was evident, had come from points beyond Washington. The Chief Justice announced that double the usual time would be allowed to each side. That meant four hours for either party.

Mr. Johnson proceeded to open the case in a plain, business-like manner. He had not spoken five minutes before everybody who heard him was convinced that here was no ordinary man. Void of affectation, and to all appearance unconscious of self, Mr. Johnson talked to the Justices in a tone not exactly conversational, and yet only a little above it. It was the conveying of information through a perfectly easy, untroubled channel. His wonderful ability consists in the perfection of his power of statement. In this respect older members of the bar say that he proves himself the equal of the late Benjamin R. Curtis. Judge Curtis was cold, he used no gestures, but held the attention of the court by his remarkable clearness and conciseness. On the other hand, Mr. Johnson adds to these qualities a gentle warmth and a vein of humor which render it a delight to listen to him.

The usual mode of opening a case is for the counsel to state the facts in orderly sequence. Mr. Johnson dared to abandon this method. He laid down six propositions of law, and, taking each up in turn, stated the facts relating to it, and the application of the principle thereto, before going to his next point. In general, the appellants through him contended that the formation of the Northern Securities Company was a defensive measure, for the purpose of guarding the stock of the two railway companies against the repetition of such a raid as had been made by the Harriman interest of the Union Pacific; that Mr. Hill looked to the building up of traffic with China and Japan, and that the real competition was not between the Great Northern and the Northern Pacific, but between these two roads, on one hand, and the Canadian Pacific and the Pacific roads to the south on the other; further, that a larger competition existed and was to be fostered with England and Germany and other European nations in securing the vast trade of the Orient. These and other points were vigorously set forth and well illustrated. The speaker received the closest attention from the Court. While reading the figures from the reports of the railroad companies in order to assure the Court that there had been no restraint, but really a great enlargement, of commerce, Mr. Johnson used the word "thousands." Mr. Justice Harlan

interrupted, and pointed out that the figures in the report said so many "millions." "Yes, your Honor," replied Mr. Johnson, "you see I am not given to exaggeration."

Mr. Bunn followed Mr. Johnson, confining himself to a single point, namely, the constitutionality of the anti-Trust statute if it is to be regarded as authorizing an interference with the transfer of stock in State corporations; or, in other words, the non-applicability of the Sherman Act to the absolute sale of the stock of these two roads, which was accomplished in the formation of the Northern Securities Company. Mr. Bunn delivered his argument in a lawyer-like manner. He has a good voice, and his sentences are directly to the point, while his style is logical almost to severity, earnest, and convincing.

Late in the afternon of Monday, the Attorney-General arose to reply. There was a little flutter in the courtroom at this point. The Attorney-General, turning to his opponents, said that they had taken upon themselves to be considered as speaking for criminals, in the supposed view of the Government. This was a misrepresentation. He regarded their clients not as criminals, but simply as defendants in a court of equity. With this premise, the Attorney-General proceeded to open his case. He recited somewhat of the history of the origin of the Northern Pacific Railroad, and of the land grant with which Congress had helped to build it. When asked by Mr. Justice White if he rested his case upon the ground that the Northern Pacific Railway was a land-grant railroad, Mr. Knox said that he did not. "Then," said the Justice, "your remarks in this respect are irrelevant." The Attorney-General said he had introduced them for the purpose of meeting certain outside criticism of this prosecution.

This was the first appearance of the Attorney-General to argue a case before the Supreme Court of the United States. Naturally some degree of curiosity existed on the part of the bar to learn with what degree of ability "the first lawyer in the land" would acquit himself. It was a matter of surprise to see that, instead of speaking *ex tempore*, he read his argument from printed sheets. He has a good delivery, a voice of fair compass and of penetration, and altogether a manner denoting a thorough conviction of the correctness of the points he is making. Still, in a legal argument something is sure to be lost in reading from a paper instead of addressing the Bench orally. It may be remarked in passing that the text of one at least of Mr. Olney's arguments before the Court when Attorney-General (perhaps the able presentation of the Government's side of the Income Tax cases) had been committed to memory by Mr. Olney, and recited, but so cleverly that no one would have suspected it.

One naturally contrasted his deliverance with that of his distinguished opponent, Mr. Johnson. It was Pittsburgh set against Philadelphia. Johnson took a broad, comprehensive view of the whole subject. He sketched the project of raising a bankrupt corporation into life, and creating a great traffic, through the genius of a single mind grappling with a formidable railway problem. He pointed out the vast sweep of the principle at the base of the contention in this cause. Though apt at detail, and losing the thread of no authority that was needful to a full conception of the points involved, the great Philadelphia advocate lifted the case, as it were, into a higher region of thought and debate. The Attorney-General, on the other hand, seemed to plant his feet upon the solid ground of the duty of Mr. Hill and of Mr. Morgan, like that of everybody else, to obey the law. He indulged in no sentiment. He alluded to the Orient as "dreamland." He hammered away at the point that by combination these two roads had, contrary to the law, destroyed competition and therefore restrained commerce; that the object of consolidating the roads was to restrain commerce and to kill competition; that the Northern Securities Company controlled every act of two gigantic systems of railroads, and that it was violating the law in so doing.

Mr. Johnson was cheery, good-humored, and optimistic. Mr. Knox was sober, and inclined to admonish and deplore, and appeared to make a good deal of impression upon the Court. His carefully prepared address was incisive, assertive, and emphatic. If it could hardly be called a great argument, it lacked nothing save that indescribable quality which only a consummate advocate imparts to his utterances in the heat of forensic contest.

The Attorney-General concluded his argument about two o'clock on Tuesday. Judge Young arose to reply. He speaks with facility and uses choice language, but his voice does not carry well, and it is not unlikely that many persons at the back of the room (partly because of its wretched acoustic properties) could with difficulty hear what he said. The Court paid undivided attention. In a few apt words he disclaimed for his clients any intention to violate the law, any desire to evade their proper duty, or any wish for the Court to depart in the least from the construction already placed upon the Sherman Act. His argument went down deep into the very sources of the law. Judge Young is a thinker and a close reasoner. At the same time he shows himself to be in touch with business and practical affairs. He was concise and clear, and his effort was equal to the great responsibility laid upon him in closing the arguments. His illustrations were frequent and felicitous, particularly one referring to the driving out of business of the old-fashioned stage-lines, when he spoke of the far-seeing men—the Hills and Morgans of those days—who saw the possibilities of the railway.

When Judge Young made his bow to the Justices and sat down, it was felt that this great case had been presented to the Court with all that scrutiny and force of argument on each side which it demanded. The bar of the Supreme Court of the United States had maintained its reputation.

MASSON'S KING OF ROME.

PARIS, December 2, 1903.

M. Frédéric Masson goes on realizing year after year his ambitious scheme of historical studies on the Napoleonic period, and all lovers of history must hope he will carry it to its end. It will be his monument, but a perennial quality he himself allows only to bronze and to medals. Speaking of the medals struck during the Empire, he says:

"This incomparable series will insure the glory of Napoleon when all books have disappeared, when all monuments have fallen into dust. . . . People will decipher the names of these capitals for the first time united under the same sceptre; they will spell the names of these towns which, like luminous points, illuminate the map of Europe on which Napoleon spread his empire; and before these credible witnesses, with their faces of gold, of silver, or of bronze, the antiquarian will confess that it was not all a fable, and that the nineteenth century also had its Alexander."

M. Masson from time to time interrupts his chronological study of events and gives us a biography, generally with beautiful portraits and engravings. He has done so for Josephine; he does it now for Napoleon's son, the King of Rome, called Napoleon II. by the devotees of the Napoleonic religion. Towards the end of the Second Empire, Henri Rochefort published pamphlets, under the name of *La Lanterne*, which were very bitter satires on the Government of the time, and had an immense success. I remember that in one of them Rochefort said that he, too, was a Bonapartist, but that he had a right to a preference and to choose among those who bore the name of Napoleon. "Of all these," said he, "I prefer Napoleon II., and my reason is that he never reigned."

When Prince Louis Napoleon made his *coup d'état* and assumed, some time afterwards, the name of Napoleon III., he showed his evident desire to perpetuate a dynasty (for a similar reason the unfortunate Dauphin, who died in the Temple, was called Louis XVII.). The first Napoleon had the same thought when he divorced Josephine and married an Austrian archduchess. History does not admit hypotheses; it has a right to judge facts. Was Napoleon well inspired when he divorced Josephine and married Maria Louisa? Would it not have been better for him and for France if, instead of courting the alliance of an old empire and entering into what is still called the family of sovereigns, he had boldly adopted the Roman method of adoption? This was his first inspiration; he long thought of adopting Eugene Beauharnais, and choosing him as his successor. Prince Eugene was far from being a man of genius, but he had common sense, he was loyal to his benefactor, he had won the esteem of the sovereigns of Europe; the hostility of all the members of the Bonaparte family to the members of Josephine's family was a difficulty which Napoleon could always overcome. Napoleon had also fixed his eyes on Napoleon-Charles, eldest son of Louis, King of Holland, and of Hortense. This young Prince had the advantage of uniting the two families; but he died very young, at The Hague, in the spring of 1807.

Napoleon's marriage with a daughter of the Hapsburgs was, in M. Masson's opinion, more than a political mistake. Studying from a physiological point of view the ascendants of Maria Louisa, he pronounces her to have been a "degenerate"—the word now used to express the sad results of atavism, when the ancestors have a blood impoverished by disease. Maria Louisa justified, in a sense, this severe epithet; but at the time of Napoleon's marriage the theory of heredity was not much discussed. She had every appearance of robust health,

and all Napoleon really cared for was to have an heir. His hope was not disappointed, and Napoleon gave to his son the title of King of Rome. The child had a splendid establishment, and M. Masson indulges, as usual, in full details regarding it. Information was sought on all sides concerning the customs and etiquette of the court of the Bourbons when a royal prince was born. The budget of the King of Rome was fixed at about a million francs.

The post of governess of the young child was much envied; Napoleon had, even five months before its birth, assigned it to a person belonging to the old French aristocracy. He was very anxious to make a sort of fusion between the nobility of the old régime and the nobility which he had himself created. The governess of his choice was the Countess of Montesquiou, born Le Tellier de Louvois; her husband was high chamberlain and president of the legislative body. She was the granddaughter of the Marquis de Montesquiou, who played an important part in the Constituent Assembly in 1789, became a general in the armies of the Revolution, and in 1792 occupied the province of Savoy, which was added to the territory of the Republic. All the Montesquious had not followed the cause of the Republic; one of them, the Abbé de Montesquiou, was the special correspondent of the future Louis XVIII. (We have reason to think that this correspondence, which must have been of great interest, has been completely destroyed.) Madame de Montesquiou was a witness of the birth of the King of Rome. The confinement was extremely painful. Maria Louisa was in great alarm, and it is said that the child was for a moment abandoned on a carpet. Madame de Montesquiou had presence of mind enough to take care of the infant, who made no cry for seven minutes. Shortly after, the door was opened to all the high dignitaries who had been summoned for the occasion; the child was presented as "the King of Rome," and the two great chancellors passed round his neck the cordons of the Legion of Honor and of the Iron Crown. The baptism took place with great solemnity, in the month of June, at the Church of Notre Dame.

The child for three years was seen often in the Tuileries, the Champs-Élysées, and on the road to Saint-Cloud, with a great escort on horseback, as so many years afterwards was seen, also with an escort, the young son of Napoleon, the Prince Imperial, as he was called, who met with such an untimely and unfortunate death in the land of the Zulus. The King of Rome was always accompanied by Madame de Montesquiou; he became greatly attached to her, and called her "Maman Quiou." The Empress could see her son only in the presence of Madame de Montesquiou; her lady-in-waiting was the Maréchale Lannes, Duchess of Montebello, who was very unfriendly to Madame de Montesquiou, as belonging to the old nobility, while Madame de Montebello had a bitter hatred of all who had not the sort of nobility, of recent date, which she had herself. Under Madame de Montesquiou there were two other governesses, Madame de Mesgrigny (sister of the Count de Rambuteau, who afterwards became prefect of the Seine), a very handsome person, whom the Emperor had courted a moment, but who resisted his advances; and Madame de Boubers, who had been for a while attached to the children of Queen Hortense.

Napoleon had not much time to bestow on his child. Tolstoy gives in 'War and Peace' an impressive scene, when Napoleon, during his march through Russia on his way to Moscow, received a portrait of the King of Rome and showed it to his generals and his soldiers. When the tide of evil fortune arrived, and France was invaded in 1814, Napoleon on leaving Paris confided his wife and child to the National Guard. On the 29th of March, Maria Louisa fled from Paris. It is said that the child made great resistance, protesting, "Let us stay here, I don't want to leave this house. Since papa is not here, I am the master." He was taken first to Orléans, where he stayed a little while, playing with the younger pages in the court of the bishopric, where his mother resided. The pages soon returned to their families; the child remained alone with Mme. de Montesquiou and his mother. After the abdication at Fontainebleau, the King of Rome became a sort of hostage. Mme. de Montesquiou urged Maria Louisa to join the Emperor at Elba; but her efforts were vain. The Empress of the French had very willingly become again a mere archduchess. Mme. de Montesquiou followed the King of Rome to Vienna, and remained a year longer with him. We must cite a letter which she wrote from the Austrian capital to her husband, who urged her to return to Paris:

"If this child had a mother, I should willingly leave him in her hands and keep quiet; but this is far from being the case. She is more indifferent to his fate than the latest foreign servant in her employ. Besides, those who have followed me here would follow me again, if I wanted to leave, having no means of remaining here. As long as I am here, they have somebody to console them; if I were gone, they would not know what to do, and the poor child would suffer in consequence. . . . We are here, a small group, who often weep round this cradle, not for all the advantages the child has lost—for, in my opinion, he will be happier than he would have been—but because he lacks what is for others the prime good."

That is to say, a mother. This letter which has only now come to light, is the severest indictment ever made, not only against Maria Louisa, but against those under whose direction and by whose orders she was acting. The last French people who still remained with the child were soon removed. The departure of Madame de Montesquiou was a scene of violent despair. The child was four years old when all the ties with France were severed, and it is no wonder if the systematic education he received and which tended to make of him a thorough Austrian, was successful in the end. Was it absolutely successful? As to this there are two versions: one is that adopted in "L'Aiglon," which gives us the vision of a sentimental, ambitious, and Napoleonic child, full of dreams and anxieties; the other represents to us a young man indifferent to France—a weak creature in whom the Hapsburg blood left no place for that of Napoleon.

Correspondence.

THE OTHER SIDE.

To the Editor of The Nation:

Sir: Having been interested in the culture of cotton for fifty years, and following its fortunes, selling it as high as one dollar per pound after the close of the war in 1865, and as low as three and a half cents per pound in 1892, I may be permitted to express my views in regard to the cotton trade.

It has been the habit of spinners and bear speculators to send men travelling through the cotton belt to publish magnified reports as to the probable size of the cotton crop, in order to depress prices. This has been going on for years, and these exaggerated reports have each year cost the poor cotton planters millions of dollars. But last year the reports were so misleading that the spinners bought from hand to mouth only, and a speculator who was informed of the shortness of the crop bought up the cotton which the spinners did not choose to purchase, at a low price, in order to force the price still lower; and the speculator in the meantime accumulated so much of the crop that he controlled the market and sent the price up to 13½ cents per pound for middling cotton. This transaction opened the eyes of us poor cotton planters; and as we ascertained that this year's crop was short of last year's crop, we thought we might for once derive a benefit from the exaggerated reports as to the size of the crop, and we are this year for the first time in many years getting the benefit of the late rise in price.

Although the crop is short there is still some cotton in the fields, owing to the fact that the laborers are demoralized on account of Mr. Booker Washington's dinner at the White House. We do not look for any further demoralization of labor since the Senate failed to confirm Mr. Crum.

M.

Mississippi, December 8, 1903.

[In the matter of crop estimates, the Southern planter is between the devil and the deep sea. There is no reason to suppose that the motives and methods of the spinners and bear manipulators have been more disingenuous than those of the people who are now talking higher prices for cotton. The agents of the spinners estimated the present crop at upwards of 11,000,000 bales, and the bull leader of the market at 9,986,000 bales. To be sure, the latter has the Government statisticians on his side; but the actual yield always considerably exceeds the Government's figures, and the *Financial Chronicle*—a high authority on cotton—has just estimated that the present crop will be larger than that of last year, which amounted to 10,758,326 bales. It would perhaps be well for the Southern growers to bear in mind that there's many a slip 'twixt cup and lip. Not a few of them are disposed to hold their cotton for a heavy rise from the present abnormal quotations; but what if, after all, the yield should be nearer 11,000,000 than 10,000,000 bales?

As regards the labor question, what is the state of society in which an act of common civility—not to call it an example either of democracy or of Christian charity—by the first gentleman in

the land should have an adverse influence in remote cotton-fields? The North never would have made a topic of Mr. Roosevelt's decent behavior to Mr. Washington—neither condescending nor levelling up; and if the analphabetic cotton hands in Mississippi heard of it at all, it must have been in consequence of the pother over it in the Southern press and conversation. This is the familiar way in which the ante-bellum South circulated abolition papers and tracts never intended to be sent south of Mason and Dixon's line, or addressed to any but white and Northern intelligences.—Ed. Nation.]

CARLYLE'S DANTE.

To the Editor of The Nation:

Sir: Doubtless many readers of the lecture on Dante in Carlyle's 'Heroes and Hero-Worship' have been vaguely troubled by a discrepancy between the description of "that portrait commonly attributed to Giotto" and the portrait itself. But perhaps not all have been at pains to inquire what the discrepancy is and how it arose. The passage runs as follows:

"After all commentaries, the Book itself is mainly what we know of him. The Book;—and one might add that portrait commonly attributed to Giotto, which, looking on it, you cannot help inclining to think genuine, whoever did it. To me it is a most touching face; perhaps of all faces that I know, the most so. Lonely there, painted as on vacancy, with the simple laurel wound round it; the deathless sorrow and pain, the known victory which is also deathless;—significant of the whole history of Dante! I think it is the mournfullest face that ever was painted from reality; an altogether tragic, heart-affecting face. There is in it, as foundation of it, the softness, tenderness, gentle affection as of a child; but all this is as if congealed into sharp contradiction, into abnegation, isolation, proud, hopeless pain. A soft, ethereal soul looking out so stern, implacable, grim-trenchant, as from imprisonment of thick-ribbed ice! Withal it is a silent pain, too, a silent scornful one: the lip is curled in a kind of godlike disdain of the thing that is eating out his heart,—as if it were withal a mean insignificant thing, as if he whom it had power to torture and strangle were greater than it. The face of one wholly in protest, and life-long unsurrendering battle, against the world. Affection all converted into indignation: an implacable indignation; slow, equable, silent, like that of a god! The eye, too, it looks-out as in a kind of *surprise*, a kind of inquiry. Why the world was of such a sort? This is Dante: so he looks, this 'voice of ten silent centuries,' and sings us 'his mystic unfathomable song.'"

It may be seen at a glance that the object of Carlyle's "devouring eyes" when he wrote this description, could not have been the so-called Giotto portrait on the wall of the Bargello. For one thing, in that portrait the laurel wreath is lacking. For another, Giotto's Dante (if it be Giotto's and not, as is commonly believed, Taddeo Gaddi's) is no such battle-scarred veteran as is implied in the phrase "life-long, unsurrendering battle against the world," and in the adjectives grim-trenchant, disdainful, and implacable. He is a mere youth. His face is serious, no doubt, even pathetic, but it is not stern or scornful; it is the face of one who, whatever he may come to be later, is as yet meek, passionless, and unprotesting.

But in an attempt to reconcile the description with the portrait these are not the only difficulties. As was pointed out in 1882 by two contributors to *Notes and Queries* (Sixth Series, vi., pp. 167, 297), when the lecture on Dante was delivered the Giotto portrait was virtually non-existent, having been covered over with whitewash for some two hundred years. Indeed, until it was uncovered on the wall of the Bargello by Kirkup, Wilde, and Bezzi, July 21, 1840, its very location was unknown. Now Carlyle's lecture was delivered May 12 of the same year. It was written out from reporter's notes for publication on July 15 following, on which date Carlyle says in a letter: "I have this instant finished my third lecture" (that is, the lecture on Dante and Shakspere). In other words, it appears, from a comparison of these dates, that the Giotto portrait was discovered six days after the lecture was put in manuscript, and more than two months after it was delivered. As one of the contributors to *Notes and Queries* plausibly remarks, if Carlyle uttered May 12 the passage which afterward appeared in the printed lecture (not published, however, until March, 1841) he might have laid claim to the gift of prophecy.

The facts here presented give rise to three questions:

(1.) Was the description of Dante in the extempore lecture the same as the description in the printed book?

(2.) What did Carlyle mean by "that portrait commonly attributed to Giotto"?

(3.) What portrait was before Carlyle's eye, or in his mind's eye, when he composed the description?

The first question I am unable to answer; and unless the author's notes, or the reporter's notes, of the third lecture are now extant, it is possible that no answer will ever be forthcoming. As regards the second, I am indebted to Mr. Theodore Koch, the bibliographer of Dante, for a plausible suggestion. Says Mr. Koch, in a private letter: "The search for the Bargello portrait having been going on for some three years before 1840 [eight years, according to Kraus, 'Dante,' page 168], Giotto's name was naturally much bruited about, and Carlyle caught it up when he was describing an altogether different type of portrait." This very likely is the true explanation. That Carlyle was kept pretty well informed on Dante matters we know from several passages in Mrs. Carlyle's letters. His brother John, the translator of the 'Inferno,' was a Dante enthusiast. He appears to have talked Dante relentlessly to anybody who would listen to him. All, therefore, that John knew, Thomas, at one time or another, must have heard, though he may not always have retained it in its original form. It is possible, then, that Carlyle, from these talks, had gained the impression that certain portraits of Dante were the lineal descendants of the much-desiderated Giotto portrait. When, therefore, he used the words "that portrait commonly attributed to Giotto," it was as if he had said "that type of portrait which is derived from the Giotto portrait." This explanation, however, it must be confessed, is in one respect not very satisfactory. The words "which, looking on it, you cannot help inclining to think genuine, whoever did it," are curiously significant. They hint a doubt, which, as far as I know, had not yet arisen, and which did not assume definite form until, in 1864, Milanesi and Passerini pronounced the so-called Giotto portrait to be the work of Taddeo Gaddi. In the light of after-discussion, the words "whoever did it" seem fairly prophetic; but possibly some one better versed than I am in the history of Dante iconography can readily explain them.

The answer to the third question, namely, What portrait was actually before Carlyle when he wrote? may be contained in some of the letters and memorials not yet given to the world. In default of such direct evidence, it is interesting to note that Carlyle had in his possession, at the time he delivered his "Hero" lectures, two portraits of Dante, one by, the other after, the engraver Tofanelli. The first was the engraving noted by Mrs. Allingham as hanging over the sideboard in the back dining-room at No. 24 Cheyne Row. It shows only the head and part of the shoulders, the hand and book not being visible. Beneath it on the left is printed "Stefano Tofanelli disegnò," and on the right, "Gio Paolo Lorenzi sordo muto incise." Under the portrait is a quotation from canto xxiv. of the "Purgatorio":

> "Io mi son un che, quando
> Amor mi spira, noto, ed in quel modo
> Che ditta dentro, vo significando."

The second portrait is in Carlyle's own copy of Dante, a three-volume edition published by P. Borghi e Comp., Florence, 1837. This engraving is of the Tofanelli-Morghen type, but it is much smaller and poorer than the portrait referred to above. The design is by E. Cateni, the engraving by Lasinio Figlio. Both the large engraving and the edition of Dante containing the smaller engraving are now in the possession of Mr. Alexander Carlyle of Newbattle Terrace, Edinburgh, who has kindly furnished me with a description of them.

The Tofanelli engraving agrees in most respects with Carlyle's description. The simple laurel wreath is wound about the head. In the face one may see, if not exactly the traits depicted by Carlyle, at least what might have suggested such traits to a man of genius whose imagination was at white heat. Though it is supposed to derive from a painting by Tommaso Gentili, the Tofanelli portrait is not a work of great art. To at least one person the face is somewhat weazened, and seems on the verge of a whimper. It would be absurd to compare it for an instant with such a work as the Raphael portrait in the Vatican, to which Carlyle's description bears a close resemblance. But if Carlyle actually made use of Tofanelli's engraving, this would not be the first time that genius has been touched to great issues by a minor work of art. Lessing, Keats, and Rossetti are cases in point.

A search in Carlyle and Dante literature has disclosed a few references to the question in hand in addition to those cited at the beginning of this communication. Professor McMechan, in his edition of Carlyle's 'Heroes,' notices that Carlyle has "here made a slip," and seems to suggest that the portrait described was drawn from the deathmask. From Mr. Walter Littlefield, whose article on Dante portraits appeared in the June issue of the *Critic*, we learn that "undoubtedly it was a composite picture of early *iconografia* which Carlyle beheld in his imagination when he wrote

those famous lines, which, he tells the reader, were inspired by the contemplation of the portrait attributed to Giotto." Mr. W. C. Brownell, on the other hand, in his 'Victorian Prose Masters' (p. 77), seems to have overlooked altogether the discrepancy between description and portrait. "His rare admirations," he says of Carlyle, "are childish—for example, the feeble Dante fresco portrait once ascribed to Giotto, his interpretation of which is as absurd as anything in Ruskin."

FRED NEWTON SCOTT.
UNIVERSITY OF MICHIGAN, November 25, 1903.

Notes.

The Life of Lowell for the American Men of Letters series of Houghton, Mifflin & Co. has been undertaken by Dr. Samuel M. Crothers.

McClure, Phillips & Co. have nearly ready 'Great Masters,' by John La Farge.

From Lemcke & Büchner we receive the thirteenth issue of the ever welcome and as indispensable *Minerva*, swollen, as the editor points out, by more than a hundred scientific and learned institutions, many of them new foundations, but not all nor most. The index of names—the ready "Who's Who" of the learned world—shows 4,000 new entries: a greater boon. For portrait frontispiece we have Herkomer's etching of Prof. J. E. B. Mayor, dear to classical scholarship.

The recent visit of the Honourable Artillery Company to the Ancient and Honorable Artillery Company of Massachusetts has been commemorated in a sumptuous small-folio volume entitled 'The Historie Booke,' and privately printed for the Boston Company. Portraits of sovereigns, governors, and President, of past commanders; facsimiles and rosters; lend a permanent value to this "tale of two worlds and five centuries—1537, 1638, 1903." For Bostonians especially the portraits will have a peculiar interest, including as they do many famous citizens of the commonwealth and of the United States.

The English Bible, King James's version, regarded as one of the great and admirable body of "Tudor translations," pursues its course in David Nutt's beautiful edition with volume four (Isaiah to Malachi).

Another of R. Ackermann's sporting books, 'The Analysis of the Hunting Field,' "a slight souvenir of the season 1845-46," is revived by Messrs. Appleton. The colored illustrations are by H. Alken, and so are the clever initial letters and vignettes, not always as well reproduced and sharply printed as the I on p. 115.

We cannot predict a general consensus in the implication of Elia W. Peattie's title, 'Poems You Ought to Know' (Fleming H. Revell Co.). Mrs. Peattie is the literary editor of the Chicago *Tribune*, and our recollection is that these poems appeared one by one in that paper, which was certainly all the better for them. Still, we think life could be passed without repentance for ignorance of Francis A. Durivage's "All," in spite of Bayard Taylor's encomium. And ought we even to know who Durivage was? We may say the same of Gen. Henry R. Jackson's "My Wife and Child," of Gen. William H. Lytle's "Antony and Cleopatra," of Father Ryan's "The Song of the Mystic," of J. L. McCreery's "There Is No Death," and of many more pieces and authors. We can hardly admit that the inclusion of such as these was a sufficient excuse for reprinting (in a book) old favorites.

'The Thoughtless Thoughts of Carisabel,' by Isa Carrington Cabell (Henry Holt & Co.), is the title of a set of social satires, written originally as newspaper articles. They do not pretend to literary merit, but they are the reflections of a shrewd feminine intelligence which ranges over problems that every woman must confront—"Servants," the "New Man," the "New Child," and "Nervous Prostration," that disease of the rich, on which Carisabel remarks: "The 'Life and Letters of Stevenson' is the best tonic for nervous prostration. It costs two dollars, but then the starchy angel will cost her society and twenty-five dollars a week." Carisabel's lively descriptions of her college-bred daughter express the conservatism which is the keynote of this domestic philosophy.

In 'The Nature of Goodness' (Houghton, Mifflin & Co.), Prof. George Herbert Palmer carries on in an interesting manner the discussion on which he entered in his 'Field of Ethics.' The treatment here, as there, is extremely fresh and vital; the style, not far behind Professor James's in point of homely vigor. Professor Palmer's expectations are not extravagant. Wishing merely to make people aware of what has always been in their minds, he feels that his readers may "know no more at the end of my book than they did at the beginning"; yet he hopes they will henceforth "find the world interesting in a degree they never knew before." This hope will doubtless be made good through a wide range, but the better informed of Professor Palmer's readers will enjoy his book much more than the worse informed, because they will recognize that they are, through much of the way, enjoying a criticism of various ethical books and writers whose names are given at the end of each chapter, but do not disfigure its course. "From the Double Nature of Goodness," as extrinsic and intrinsic, we pass to "Misconceptions of Goodness," and a set of well-considered definitions. The succeeding chapters treat of "Self-Consciousness," "Self-Direction," "Self-Development," "Self-Sacrifice," "Nature and Spirit," and "Three Stages of Goodness." Some of the apparent paradoxes are resolved in a suggestive and not too ingenious manner. At every step of its advance the argument hugs close the shore of concrete moral experience, so that while ethics is nowhere confounded with morality, the book is likely to prove morally helpful in not a few of its particulars.

A large enterprise has been begun by MM. Jules Gilliéron and E. Edmont in an 'Atlas Linguistique de la France,' of which 4 numbers have been published, each containing 50 maps (Paris: Honoré Champion). There are to be at least 1,800 sheets in 36 parts, at the price of 20 francs the number (25 francs after the sixth *livraison*). Every map will be devoted to a single word or single morphological type. It is supposed that 4 numbers will be published every year, and that the publication will be finished in 1908. The first map is devoted to the word *abeille*, and the patois equivalents throughout France. In the north of France *mouche* prevails; in the south *abeille;* and it is strange to note that in some localities *ruche, essaim, guêpe, bourdon* are used for *abeille*, contrary to the linguistic processes of other peasants who say *aps, eys, é,* or *a*, which are derivatives from the Latin *apis*. M. Roques, in the *Débats*, quoted in the publisher's circular, gives a skilful study of the Latin history of the word, and of the advance on the country dialects made by the speech of Paris. M. Edmont is the author of the 'Lexique Saint-Polois,' an excellent dialectal study, and is the chief worker among the investigators. It is quite unusual to be assured, of so large a work, that all the maps were ready for the printer in January last, and that only funds are needed to complete the publication. One would expect the General Atlas to follow a special study of all departments and localities. The order seems to be somewhat reversed in the case of this atlas; but it is evident that a large mass of valuable material will be lost if the plans of the editors fail.

Pierre Decharme's 'Compagnies et Sociétés Coloniales Allemandes' (Paris, 1903) bears for its epigraph the Bismarckian sentiment, "Avant le soldat, le marchand!" Conformably with this conception of the order of things, the volume throws weight upon the action of the German Chartered Companies as pathfinders for the imperial development to come. Decharme thinks that the inefficiency and final collapse of the companies mark a failure of the Chancellor's policy. This is doubtful; for, admitting the dangerous premise that any one knew or knows the workings of that subtle and not unscrupulous mind, the fact still remains that the original desire of Bismarck as expressed, namely, to organize the German colonies after the British Crown Colony model, has been fully realized. The colonial societies and their activity are treated in an interesting and exhaustive manner. Decharme thinks that their operations have resulted in "confounding colonization with external commerce," and that they have led to the easy launching of questionable enterprises. Especially valuable for the student is the series of statutes, charters, treaties, etc., appended to the volume, and the list of companies and colonial societies with their dates of founding, capitalization, and the like. The bibliography also contributes to make the volume an excellent one for the student of colonies.

Part III. of the Transactions of the German Asiatic Society of Japan, for 1903, completing volume ix., contains five papers, every one of interest, and two of more than usual importance. Dr. Koganei furnishes a rigidly scientific paper on "The Original Inhabitants of Japan." He proves, from profound researches and careful comparative examinations, with measurements of the physique of the Japanese and their habitations, the substantial identity of the Aino of Yezo and the Kurile Islands with the natives of the more southern old Japan, or the long civilized part of the empire. He makes language, the shell-heaps and other subterranean evidences, besides various constants in superficies and proportions, tell their story. His conclusion is set forth in his final sentence, which confirms his previous deliverances on this point: "The Japanese realm (*Reich*) was once an Aino realm." Rev. H. Haas treats of the origin of the name Nippon, showing its Chinese origin.

The same scholar presents a study of the religions of Japan, though rather in the form of a survey of the literature of the subject, pointing out the store of materials for a study of Shinto, Buddhism, and Confucianism, now awaiting the foreign student. The tables of statistics, with names and founders of the different sects, with dates, is very valuable, showing that the Shin, or Protestant sect, which teaches justification by faith, leads all in the number of temples. Those who have noted with interest the great part which gifts of sustenance, both of uncooked food and of delicacies and decorated eatables, play in the social system of the Japanese, will find a very pleasing and correct study of the Japanese custom of food presents. The paper is reinforced with eight pages of illustrations concerning the arrangements of tables, trays, tying cords, and the peculiar folded papers containing, as insert, a bit of dried fish. In this we see a survival and elaboration of very primitive rules of life. There is also a good paper on the Imperial Realm or Crownland of Hokkaido (Yezo). The proceedings of the meetings regularly held show the flourishing state of this learned society.

Prof. Dr. Karl Krumbacher of Munich, the only occupant of a chair for Byzantine Greek in a German university, is publishing in the reports of the Royal Bavarian Academy (Historical Section, 1903, *Heft* III.) the text of an entirely new specimen of a peculiar kind of mediæval literature, of which only a very few samples have been issued. This is the famous 'Fish Book' (ὀψαριολόγος) belonging to a larger group of Animal, Plant, and Stone Books, and closely related to the Quadruped Book, the Bird Book, and the Fruit Book, of which Krumbacher gives an interesting account in his 'Byzantinische Literaturgeschichte' (II., p. 877 *sq.*). It is nearest akin to the last-mentioned, both describing tricks which take place before the King, with the object of satirizing the abuses of title and office in the Byzantine Empire. In the Fruit Book the grape raises some false charges of treachery against a number of officials; in the Fish Book the hungry mackerel are charged with conspiracy against his Majesty King Whale, in which also Count Sardine has taken part. This edition of the Fish Book is based on the only codex in existence, a Middle-Greek Manuscript in the Escorial, of which Krumbacher managed to secure a photographic reproduction. The best-known specimen of this curious type of literature is the 'Reinecke Fuchs' story, of which Goethe gave so masterly a version.

Only two years ago an attempt to introduce the translation of the New Testament into modern Greek created a students' riot in Athens that resulted in bloodshed. Quite recently Angelos Simiriotis, a professor in the theological seminary in Smyrna, sought to introduce such a translation as a part of his lectures to his pupils, and then to publish the work. At the instigation of the local synod in Constantinople, the Metropolitan of that city, who is the head of the Eastern branch of the orthodox Church, published a bull addressed to the Archbishop of Smyrna demanding that Simiriotis's work be suppressed, and that the copies which had appeared should be confiscated. This was promptly done.

The gratifying announcement is made that the new Pope will continue the policy, adopted by his predecessor twenty years ago, of giving free access to the savants of all nations to the treasures of the Vatican. Some time after the election of Pius X., Dr. Pastor, the director of the Austrian Historical Institute in Rome, in an audience with the pontiff, when presenting to him the fourth edition of the first volume of the 'History of the Popes in the Age of the Renaissance,' gave expression to the hope that the liberal policy of Leo XIII. would be continued. The Pope in strong terms declared such to be his intention, and closed with the words: "Non è da temere la verità."

Only recently has Denmark communicated its formal acceptance of the Bern Convention for the international protection of authors; and now the Swedish Society of Authors has united in a petition to the Government to have the authorities of their country take a similar step. The promise has been officially given that this will be done.

Two important changes took place in Iceland during 1903: the long struggle for a revision of the Constitution was finally crowned with success; and the unpoetical split codfish, which for centuries has been the coat of arms, has given way to the Icelandic white falcon. The first change is of a practical character, and it is hoped that, by having a resident minister, instead of half a minister, in Copenhagen, the Icelanders will in the next generation show an even greater advancement than in the immediate past. As a matter of fact, the desire for a worthy national symbol is an even more encouraging sign, showing, as it does, that the growth of material prosperity has not deadened the minds of the people to an appreciation of the higher things of life. For particulars regarding the above changes and Iceland's general progress, one may consult a letter in the London *Times* of October 13, 1903, from the pen of a well-known American scholar.

The six-sheet Omar calendar of Fox, Duffield & Co. frames two of FitzGerald's stanzas in a pretty green-leaf border for every two months of the year 1904, the text in brown ink on an elegant uncalendered Japan paper (a paradox to the ear). Another novelty is the pad of the Pope Manufacturing Co., which affords for each day of the year a fresh, up-to-date testimonial from some person of distinction to the healthful uses of the bicycle; substantial proof that this vehicle is not so much gone out of fashion as would appear.

—One of the best numbers in the valuable series of "Our European Neighbors" (Putnams) is that on 'Austro-Hungarian Life in Town and Country,' by Francis H. E. Palmer, the well-informed author of a similar volume on Russian life. He is at his best in the chapters conveying solid information, of a kind very much needed in newspaper offices, as to Austro-Hungarian nationalities and political and official life. If he is not quite as satisfactory in dealing with the aspects of town and rural life, he may plead that limitations of space made anything like adequate treatment of so complex a subject impossible. Hungary, on the whole, fares better at his hands than Austria, the description of life in Transylvania being particularly good. On the other hand, the account of the intellectual life of the monarchy is lamentably meagre. Not a name of any writer occurs in the chapters devoted to Austro-German, Magyar, Polish, Austro-Servian, Wallachian, and Czech literature. (Indeed, aside from royalty, the only names of Austro-Hungarian celebrities of any kind mentioned in the volume are those of Deák, Kossuth, Beust, and Hentzi.) Still poorer is the attempt to depict the social life of Vienna, the pages being disfigured by the writer's unreasoning anti-Semitic prejudice. Author and publishers are probably equally responsible for the omission or misplacement of Hungarian accents, the misspelling of German words, and the erroneous designation, in a footnote, of Kolozsvár as the Magyar equivalent of Kronstadt, instead of Klausenburg; but the indiscriminate use of French and semi-German transliterations of Russian words (such as "Moujic" and "Tscherop Spiridonowitch"), the preference for Bauers and Czech*ish*, and the interchanging of "Serbs" and "Servians," must be laid to the author's charge. The publishers, however, are answerable for the mediocrity of the illustrations (with such a subject as Austria-Hungary before them!). The tautological "Austrian Tyrol" appears so constantly in books and papers that one looks for it almost as a matter of course in a work like the present. But, with all its blemishes, Mr. Palmer's volume can be recommended as a sensible, pleasantly written, and generally safe guide in the maze of Austro-Hungarian nationalities.

—G. P. Putnam's Sons are the American publishers of Prof. Paul Wernle's elaborate study, 'The Beginnings of Christianity,' in two volumes, the first of which, 'The Rise of the Religion,' has now come to hand. Professor Wernle occupies a distinguished place in the University of Basel and among Continental theologians, but his book is not so written as to convey definite impressions. A sandy diffuseness is its most characteristic note. There are chapters on the Jewish conditions that were preparatory for the Christian origins, others upon the life and teachings of Jesus, then a series on the Jewish-Christian development, a longer series on St. Paul, and a concluding set on the Apocalypse, which is accepted as a Christian document fundamentally. Corresponding to the opinion of Harnack and others, that it is a Jewish writing which has undergone Christian redaction, we have the acknowledgment that its use of Jewish apocalyptical machinery is extremely free and bold. An English introduction assures us that the idea running through the whole book is a simple one: "It is, first of all, to ascertain what the Gospel is as seen in the teachings and character of Jesus; and secondly, to measure all the later expositions of the Gospel contained in the teachings of the New Testament writers by the Gospel itself." The idea is simple enough, but the working of it is extremely difficult, and requires for its efficiency a far more delicate critical apparatus than Professor Wernle has at his command. For it is not as if he could content himself with taking the teachings of Jesus at their face value. Even in those teachings he finds a temporal element, an historic envelope, which must be stripped away before the essential truth of Christianity can be disclosed. Where, for example, Martineau found no "Messianic consciousness" in Jesus, Prof. Wernle finds it unmistakable, but regards it as a mis-

taken consciousness, bred by the conditions of the time. Passing from Jesus to his disciples, the "historic envelope" is stripped off with a bolder hand. The early Christian theology is described as "a wretched jumble of Jewish words and conceptions, and Christian insertions and additions." If a partial exception is made in favor of St. Paul, he is nevertheless found guilty of fanatical narrowness and of confining the Gospel within a form that does not harmonize with the teachings of Jesus. In its main effect the book is one more sign of the general drift away from the traditional Christianity.

—Robert Kilburn Root's 'Classical Mythology in Shakespeare,' one of the Yale Studies in English (Henry Holt & Co.), provides a summary, not of the classical allusions altogether, but of the classical mythology in Shakspere. The subjects are arranged alphabetically, as Achilles, Actæon, Adonis, etc.; the passages from the authors that Shakspere probably had in mind are quoted, mostly from Ovid, more rarely from Virgil, but occasionally from the Greek; and the various topics are further illustrated with much comment from a wide reading. The essay, of 134 pages, begins with an introduction, in which the author considers the possibility of obtaining an argument for the genuineness of the Shaksperian authorship of plays from the different ways in which he uses mythology at different times; and a final section mentions the plays in the order of their origin according to Mr. Root, with a brief notice of the mythology in each. Classes in Shakspere will find here many interesting and instructive notes, as on poppy under "Lethe," on tent under "Hecuba," on "Ilium," on dragon under "Night," on Thomas Scarlet under "Narcissus," on "Hyperion," etc. No one, of course, will expect to see Shakspere here published as a plagiarist; the magisterial way of the old Elizabethan in dealing with his authorities is too well known for any one to fear to see him cast from his eminence. It is also understood from the days of Farmer that Shakspere relied chiefly upon the translations of the classics, mostly on Golding's translation of Ovid. In such a play as "Titus Andronicus," and also in "Henry VI.," it is curious to learn that Shakspere introduces classical myths not to be found in any other of his admittedly genuine plays. Mr. Root's essay is well worth consulting when a comment on the topics he discusses is required. Under "Hector" it might have been mentioned that Hector quotes Aristotle, who lived 800 years after the siege of Troy; and the note on the "Sibyl" and her "prophetic fury" might be compared with Mr. Grant White's comment on page 35 of his 'Memoirs of Shakspere.' Mr. White thinks Shakspere had in mind the 'Orlando Furioso,' and that the line furnishes proof that Shakspere knew Italian. Mr. Root (p. 62) discerns a reference to Fortune and her wheel in Horace, Ode 3:10, 10; but this seems hardly necessary for an explanation of the passage.

—To "The Library of Literary History," best known in this country as containing Prof. Barrett Wendell's 'Literary History of America,' has recently been added a volume on the 'Literary History of Scotland,' by J. H. Millar, author of 'The Mid-Eighteenth Century' in Saintsbury's "Periods of European Literature Series." This writer has boldly attempted to cover the whole history of letters in Scotland down to the present day, omitting only authors (like Carlyle) whose work was for the most part done in England. In the Pre-Reformation period, though the estimate of literary quality is based on his own reading, Mr. Millar makes no pretensions to authority in dealing with technical or controversial topics, and seems as a rule to depend chiefly on the recent work of Mr. T. F. Henderson. His treatment of the Ballads is not remarkable either for discriminating appreciation or for grasp of the technical problems involved, his qualifications for dealing with the subject being indicated by his choice of three supposedly typical examples for quotation, two of which are not recognized by Child as genuine traditional ballads at all, while the third is quoted in a doctored version. His discussion of later writers is marked by frequent and often grave inaccuracies, and by a strong bias against what he delights to call "high-flying," *i. e.*, all kinds of enthusiasm for reform and covenanting zeal. The reader familiar with Scottish history and the Scottish temperament will perceive that this implies an unsympathetic treatment of much that is most characteristic in Scottish literature. In the case of some contemporary writers, the author's partisanship leads him at times to unjust verdicts and the most unworthy insinuations. It is only in the case of men of his own political and theological bent that Mr. Millar is capable of rendering an estimate at once sympathetic and just. This is notably to be seen in the chapter on Sir Walter Scott, perhaps the most satisfactory in the book. It is extremely regrettable that a volume giving the most convenient account of Scottish literature as a whole should be disfigured by so much that is ill-natured and untrue.

—The fifth edition of M. Paul Leroy-Beaulieu's notable work, 'De la Colonisation chez les Peuples Modernes,' deserves almost the notice accorded to a new book. It is about twice the size of the fourth edition, and contains much new matter, besides that necessary to bring it up to date. The general character of the treatise remains practically the same. The French colonies receive an even more disproportionate amount of space than formerly; the English colonies are relatively the more restricted, although the author has always been strong in his approval of the general type of British policy. The standpoint of the work is that of the economist and statistician rather than that of the social scientist; Leroy-Beaulieu seldom vies with Roscher in breadth of philosophical view. He is at his best when dealing with such subjects as the chartered companies; his chapters on "Sociologie Coloniale," etc., are by comparison much weaker. A rather amusing self-gratulatory vein runs through this edition, indicated by frequent verbatim extracts from former editions, followed by a complacent "I told you so." But this is a minor matter, and the faults of the work are minor; it remains the best treatise we have on colonization. Several additions have been made. Some time ago Friedrich Ratzel complained that no book on colonies paid any attention to the colonial activities of races other than the white; he wished to include what may be called primitive colonization, *e. g.*, that of the Malays and Polynesians. Leroy-Beaulieu does not meet this objection fully, but he does give a respectable section to the late colonial labors, in Yezo, Formosa, and Korea, of the Japanese. Furthermore, he expands the story of Russian colonization to a considerable extent, much to the profit of his readers. Among the new parts of the work is to be found, likewise, a chapter on the United States as a colonial power. And here we have, from a recognized authority on colonies, and from a friend of colonial expansion, a lucid and wholesome statement of the economic and other incongruities of our late exploits. It does not appear that Leroy-Beaulieu is in any sense an enemy of America and her greatness; yet he takes substantially the attitude toward American "colonial" enterprise and toward the late President and his policy which has been decried as the view of narrow-minded enemies of their country. The exploit of Gen. Funston in capturing Aguinaldo is euphemistically described as "une sorte de trahison."

—Mr. Alfred Marks has had reprinted, in pamphlet form, from the transactions of the Royal Society of Literature, his paper on the probable extent of the collaboration between Hubert and John van Eyck which was read before that society on the 24th of last June. His conclusion is that both brothers worked on all the pictures properly attributable to either until the death of Hubert in 1426, and, indeed, that the collaboration cannot be said to have ceased until John had finished all the pictures begun at the time of his brother's death, ending with the completion of the great Ghent altarpiece, "The Adoration of the Lamb," on May 6, 1432. He believes that John, who is supposed to have been some twenty years younger than his brother, worked as the latter's assistant, being specially intrusted with the landscape backgrounds, of which he made a specialty, and that there are probably no pictures entirely by Hubert and none entirely by John earlier than the first authentic signed and dated picture, which is of the same year with the completion of the Ghent altarpiece. We do not pretend to the expert knowledge necessary to a definite opinion of our own in such a matter, but Mr. Marks's arguments are strong and, as he puts them, fairly conclusive. He examines all of the well-known and important works of the Van Eycks, excepting, of course, those signed by John, and finds only two in which the evidence of collaboration seems to him doubtful. His reasoning may be condensed into something like this: John van Eyck was specially praised as a landscape painter in his epitaph, and by the earliest writers on his work, who also record the tradition of collaboration. Some of the landscape backgrounds of Van Eyck pictures contain the palmetto, which grows in few places in Europe, but does grow, in abundance, in a part of Spain which we know that John van Eyck visited. This visit took place after Hubert's death, and these pictures, *ex hypothesi*, were completed after the return from this journey. There are other tropical plants in many pictures which suggest a journey to Italy, and there are snow mountains which would have been seen on the way. We have no

knowledge that John van Eyck ever went to Italy, but the presence of similar plants in pictures which he signed leads to the inference that he painted these parts of the unsigned pictures. Certain resemblances in the treatment of architecture and the observation of the flight of birds lead also to the conclusion that the hand of John van Eyck is to be found in all these pictures.

—Here it might be suggested that the argument rather tends to eliminate Hubert altogether, and that John may have painted the pictures alone. The answer is, first, the tradition of collaboration again—in the case of the Ghent altarpiece it is, of course, explicit statement; then the fact that the portraits of the brothers occur, side by side, in two of these pictures; then that John was a realist and a portrait painter, and that some of these pictures contain figures possessing a beauty of which we have no reason to think him capable. Finally, if John painted these pictures, why did he not sign them? And why do his authentic signed pictures begin precisely in 1432 and continue until his death? There are only two earlier dates, and they are shown to be on doubtful or more than doubtful pictures. John van Eyck sometimes affixed his signature to the frame of a picture, and some of these frames may have been lost. "Subject to this reservation," says Mr. Marks, "the absence of a signature renders doubtful an ascription to John van Eyck." In conclusion Mr. Marks devotes some space to the consideration of certain objections to his theory, which hardly seem very formidable, and raises the question of what work Hubert did before 1410, when John, then about twenty years old, is supposed to have become his assistant.

—European scholarship in Chinese suffers severely by the decease on October 15th of Prof. Dr. Gustaaf Schlegel, who held the chair of the Chinese language and literature at Leyden University from the year 1877. He was undoubtedly one of the greatest sinologues of our time, and eminent even in the long list of scholars associated with Leyden. The son of the renowned zoölogist Schlegel, he was born at Oegstgeest, South Holland, in 1840, and was early the pupil of the sinologue and pioneer professor of Japanese in Europe, Dr. J. J. Hoffmann. On August 20, 1862, he was appointed Government interpreter in Chinese at Batavia, holding the office until 1872, and being also, during that time, a member of the commission for the revision of the civil law of the Netherlands Indies. His degree of Doctor of Philosophy came in 1869, from the University of Jena, his thesis being on Chinese recreations and customs. On October 3, 1877, he delivered his inauguration discourse as professor in Leyden, which was concerned with the peculiarities of Chinese linguistic studies. Besides his great dictionary, the number of his writings surpasses 250, and these cover the various subjects of ethnology, epigraphy, law, agriculture, astronomy, and many matters of recondite scholarship. He was especially strong and felicitous in archaic Chinese. Many a "rubbing" from weatherbeaten monuments, after others had given them up, was made to talk clearly and coherently about things that happened long ago. Schlegel knew well the pragmatic cast of the ancient Chinaman's mind, and where others looked for high-flown sentiment and missed, he, in the dry light of sheer patience and practical genius, saw clearly and interpreted aright. We remember one inscription from a tablet on an old battlefield, over which he spent many weeks, finally winning the secret of the puzzling sentence which none other could make out. It contained the idea that, owing to the perduring stench of the field, neither the habitation of man nor work of the sculptor could be reared in the neighborhood of the great slaughter. He was long the editor of the polyglot journal devoted to sinological studies, and with the type resources of Brill (successor to Elzevir) he was rarely at a loss for ideograms. A member of the Royal Academy of Amsterdam, he read a paper during the Chino-Japanese war in defence of the Chinese as against the Japanese, believing also that the latter would not, for superstitious reasons, occupy Mukden. He was a correspondent of many learned societies in various lands, Knight of the Order of the Netherlands Lion, Commander of the Order of the Double Dragon and of the French Order of Cambodia, and various other European and knightly orders. It is to be seen whether the great Chinese scholar, J. J. M. De Groot, now in Holland, will succeed to his position.

TREVELYAN'S AMERICAN REVOLUTION.

The American Revolution. Part II. By the Right Hon. Sir George Otto Trevelyan, Bart., Author of 'The Life and Letters of Lord Macaulay' and 'The Early History of Charles James Fox.' In two volumes. Longmans, Green & Co. 1903.

It is twenty-three years since Sir George Trevelyan followed up his Life of Macaulay with the 'Early History of C. J. Fox.' This volume ended with the year 1774, and readers all over the world were looking eagerly for more of the great statesman's life from one who had proved himself so eminently competent to write it, when it was announced that the author had determined to take up the larger topic of the 'American Revolution,' a subject no doubt exhibiting Fox in some of his best efforts, but which, even if completed, would leave the most eventful half of his life unwritten. The publication a few years ago of the first volume of the 'American Revolution,' while confirming and increasing admiration of Sir George Trevelyan's talents, did not remove the regret, which will even be deepened by these volumes, that he abandoned a subject so unique to take up one which, however well he might treat it, some one else was pretty sure to take up; and one on which we can hardly believe he has said the last word, as on Fox he might have done. With this one word of protest, we pass to the volumes themselves—a monument of industry, impartiality, and generosity in a most vivacious and attractive form.

The first volume carried the story of the Revolution through the evacuation of Boston. The second part consists of two volumes. They begin by retrograding to the reception of the news of Lexington in England, and continue the narrative of action and opinion on both sides of the ocean to the abandonment of the Jerseys by Howe, and Washington's establishment at Morristown early in 1777. It will be seen that Sir George travels almost as slowly as his uncle, and with less excuse; for the career of Washington is a good deal better known than that of William III. There is not much that we wish away; but when we think of what remains to be told, we recall with apprehension what Macaulay says of Orme's 'History of Indostan': "He is minute even to tediousness, so that his narrative, though one of the most authentic and picturesque in our language, is scarcely ever read."

That Sir George's narrative is authentic as far as any book not contemporary can be, no one will question. He has extended his researches wide and deep among records ancient and modern. He is well acquainted with the "American Archives" and with Amos Farnsworth's Diary; he is equally acquainted with Tyler and Fiske, with E. J. Lowell and C. F. Adams, jr. It would be hard to name the books he has read; perhaps harder those he has not. If a few can be named which would have helped his narrative, it must be said at the same time that he has availed himself of many sources of information rarely studied even by Americans. In tracing the course of public opinion in England, he has enriched his narrative from a store of family documents.

Of this mass of hardly collected and deeply studied materials he has made excellent use. He deserves the title of picturesque as much as Orme, or Macaulay himself. The story of Trenton as he tells it will compare with his uncle's tale of Sedgmoor for vividness and brilliancy; and his history and analysis of the whole "Hessian" levy, and how it was regarded in England and America, will fascinate those who are familiar with the tale of the earlier mercenaries that marched from Ephesus to Trebizond twenty-three centuries ago. Such topics might inspire any writer, and they have awakened readers' interest for years; but the author has brought into prominence many less known incidents of the time, and has thrown over them a glow and reality which makes them no longer sandy patches alternating with the green. The constitution of the Revolutionary army and the position of the refugees in England are expanded as they should be, while the relations of Canada to the mother country and the colonies, and the character of the English newspaper press, will have the charm of novelty as well as vivacity.

The great question, however, to be asked about any account of our Revolution by an Englishman is whether the author is impartial; and to this question there is in the present instance a double answer. Neutral Sir George Trevelyan certainly is not—his sympathies are with the revolutionists; but not from any philosophical democracy or want of English patriotism. He is for Washington and Franklin because he is for Fox and Burke, for Chatham and his son, for Camden and Horace Walpole. In one of his chapters on public opinion in England—and more suggestive chapters were never written—he has these words: "It must never be forgotten that many Englishmen from the first . . . regarded the contest which was being fought out in America not as a foreign war, but as a civil war in which English liberty was the stake." The same political sympathies which made the author the enthusiastic

biographer of Fox, made him the calm but firm supporter of the colonists against court influence and remodelled Jacobitism in his own country. He labors to show that the same opinions were strongly felt and widely diffused in England in 1776. This must be regarded as one of the less successful parts of his book. He infers back from the irresistible flood of public opinion against the ministry in 1781 that the tide must have been gathering throughout the war from its earliest years; but it is hardly to be doubted that, in its middle period, English sympathy was against the colonists; doubtless from their alliance with France.

But, though not neutral, the author is truly impartial in judging the actors and their performances. He is determined, if anything good can be said of any one, to say it—even to the extent of quoting a modern German apology for the ruler of Hesse Cassel; yet not a weakness of any hero escapes him. It will do Americans good to read in his pages exactly where such men as Putnam and Sullivan and Arnold were weak and where they were strong; how the very companies which under Knowlton and Parsons showed such a bold face to Howe in Westchester, had run away from him a few days before in Manhattan.

Perhaps this impartiality can best be seen by a consideration of how he discusses Howe's entire campaign of 1776, beginning with his attack on Long Island, and ending with his cessation of active movements. He condemns Washington's attempt to hold New York in deference to the wishes of Congress, while doing ample justice to his reticent willingness to be held responsible; he praises to the full Howe's tactics in the battle; Stirling and Sullivan, Grant and Von Heister, have their dues scrupulously given them. Washington's conduct at the time of the battle is soberly criticised, and his management of the retreat as soberly praised. Howe's failure to follow up his tactical success by strategic energy is duly balanced against the failure of Washington and of Greene—for whom he has warm and just admiration—to appreciate in full the situation on the east of the Hudson. He exhibits with stern accuracy the apathy of the inhabitants of New Jersey; he paints Washington on the verge of utter despair, his troops dissolving day by day, and the contrast between the conduct of the English and that of their mercenary allies, which raised up enemies where none had been. The insubordination of Lee is vividly drawn, yet Sir George tries to find something good even in him, and one cannot help doubting if he has ever read George H. Moore's monograph on his treason. He does not seek to solve the insoluble problem of why the American force—if it deserves such a name—was not pressed to its ruin; he contents himself with intimating that if Cornwallis, to whose talents and character he pays no stinted or undeserved tribute of praise, had had control, the result would have been very different; but in the end he leaves us assured that he is glad it was not different.

Perhaps, after all, no other explanation of Howe's failure to destroy the resistance of the Colonies is needed than the reproach used to an infinitely greater tactician after an infinitely greater success: "He knew how to conquer; he did not know how to use his victory." If the old barrack ballad declared Lord Cornwallis as "brave as Alexander," it may not be absurd to make Hannibal's default a parallel to Howe's.

Trevelyan's account of the Congress of 1776, the gradual organization of the States, and the Declaration, does not seem as satisfying as some parts of the book. Undoubtedly Thomas Paine's 'Common Sense' set the whole country aflame; but the potency of the spark seems to get more and the combustible material less than the due share. The absence of all report of the debates in Congress is mentioned, and Botta's fantastic speeches properly criticised; but Sir George does not seem to have heard of Webster's reconstruction of the views of Dickinson and Adams.

We have spoken of the author's interesting contribution from family papers to the account of public opinion in England; but surely such a creature as Stoney Bowes has managed to steal too much of his space, unless, indeed, it makes people read 'Barry Lyndon' again. Another man, whom it is almost an insult to name on the same page as Stoney Bowes, namely, John Wesley, also consumes undue space. His own conversion to the royal side—as startling as any recorded in his own diary—is properly told, but his operations on the soldiers are detailed at inappropriate length.

The last chapter, on the religious bearing of the struggle, is carefully written, and with the author's uniform desire to do justice, but it deals too exclusively with the Anglican body. He does know that the prevalent church polity in New England was Congregational, and not Presbyterian; but he has little to say of the Presbyterians where they were strong, and ignores the Baptists, the Lutherans, and the Dutch Reformed. A study of Sprague's 'Annals of the American Pulpit' would have amused and instructed him; and while doing the Right Rev. Samuel Seabury ample justice, pressed down and running over, he might have made himself acquainted with that shameless burlesquer of history, the Rev. Samuel Peters.

The vein of sly humor which runs through some of the gravest chapters is thoroughly charming. Sir George remembers that in his early manhood he could see fun in our civil war where none was, and has kept his satire in check; but avails himself of some opportunities which no mortal with any sense of wit would let slip. There are very few things which need absolute correction. Americans will not easily excuse the total omission of Nathan Hale; Gowanus Creek and Meconkey's Ferry appear in unusual forms; and how will the biographer of Fox excuse the historian of the Revolution for speaking of Camden as Rockingham's Lord Chancellor?

RECENT FICTION.

Letters Home. By W. D. Howells. Harper & Brothers.

The Adventures of Gerard. By A. Conan Doyle. McClure, Phillips & Co.

Sanctuary. By Edith Wharton. Charles Scribner's Sons.

A Touch of Sun, and Other Stories. By Mary Hallock Foote. Houghton, Mifflin & Co.

The Circle in the Square. By Baldwin Sears. A. S. Barnes & Co.

Sixty Jane, and Other Stories. By John Luther Long. The Century Co.

The Whip Hand. By Samuel Merwin. Doubleday, Page & Co.

The Holladay Case. By Burton E. Stevenson. Henry Holt & Co. 1903.

Mr. Howells's latest novel should help to correct a very general misunderstanding of his literary theories—a misunderstanding which his own direct attempts to enlighten the public have only served to confirm. In popular opinion he stands for an inveterate enemy of romance and an apostle of the commonplace. As a matter of fact, he has never had any ill-feeling for romance, but has long pursued romantic nonsense with a sacred rage. In 'Letters Home' this distinction is so clearly made that none but those blind who won't see can miss it. The situation developed is so remote from the common thing in this moment of the world's history that it is of the essence of romance. Does the splendid daughter of a Western Churn and Cheese Trust, pushing Eastward in quest of social glory, abandon her adventure for the sake of a young man, engaging, it is true, but impecunious and of no importance? Can such a young man's passion exist undefiled by reflection upon a certain agreeable extension of opportunity incidental to union with the daughter of a Trust? Mr. Howells believes that such things can be, and, by his exposition of the passion of love disinterested and mighty, assures us that this sordid old world is full of romantic possibilities, and that so long as youth must precede age, the flower of romance will spring up and bloom in the barrenest soil and most uncongenial atmosphere.

True love always has its cross, and that imposed on America Ralson and Wallace Ardith is the possession of a romantic conscience which whips them to the verge of foolish renunciation. This impulse to perpetrate a folly that yet seems to be fine self-abnegation, represents the romantic nonsense to undermine and discredit which Mr. Howells has so long toiled and suffered. One may doubt whether the vigorous America would have let her lover go for good to the weak little girl who claimed him, but she had her moment of thinking that she could and must, that such abandonment was altogether good and heavenly; and that is, after all, the moment that proves how wrong would be the consummation of such highly intended sacrifice. America is very modern, a type only just coming in for notice; and though Mr. Howells has caught her salient points, we are not sure that he has correctly read her secret soul.

The novel of letters is unquestionably the most difficult narrative form, yet Mr. Howells manages it with delightful ease and vivacity. The individuality of each writer is well defined, without confusion of point of view or style. Each one, besides keeping up the story, liberally contributes himself, glimpses of his past experience, observations on the world about him; so that from these self-revelations the reader enters sympathetically into half a dozen stories. In life, people are always coming temporarily together through common interest in an actual drama, while at the same time all are busy about their own affairs and ready to drift apart as soon as the play that has attracted them is

over. The representation of this perpetual movement of life is so difficult that few novelists ever dream of trying it. Mr. Howells has shown himself accomplished in such representation over and over again, but has perhaps never come so near perfection as in 'Letters Home.'

Brigadier Gerard of the Hussars of Conflans is a splendid hero of his own tales. Nothing in the way of military exploit could be more exciting than the matter of his adventures, and it would be hard to improve on his method of narration. The only trifling defect is that his vanity, both national and personal, is overdone. But the most amusing episodes—the fox hunt behind the lines of Torres Vedras, and the triumphant exile in England—rest on his boundless self-esteem, and they are good enough to excuse a slight fault in characterization. Gay, gallant, brave, devoted to the Emperor, the Brigadier is a fine addition to the heroes who so numerously adorn the Napoleonic legend.

In the first part of the tale entitled 'Sanctuary,' Mrs. Wharton describes a very innocent young girl receiving her first intimation of the existence of evil in a hitherto beautiful world through her lover's confession of infamous conduct. The shock converts Miss Orme's love into loathing, and she resolves to abandon Mr. Peyton, but is deterred by a vision of his marrying some girl who would never know his secret and of a possible child "born to an inheritance of secret weakness, a vice of the moral fibre." This vision affects her so powerfully that she marries Peyton, her love for him having been enlarged into "this passion of charity for his race," and her whole being possessed by a "passion of spiritual motherhood that made her long to fling herself between the unborn child and its fate." The quasi-scientific treatment of such a fantastic notion does not clothe it with dignity, and the author fails to relate it to human experience.

The second part of the story is founded on common human nature, has much dramatic force, and so little necessary reference to the first part that, with some trifling alteration, it could stand alone. The relation between Mrs. Peyton and her son is well described, and the mother's conduct during the trying time of the son's exposure to a great temptation is wise enough to wipe out scores of mistakes and follies. Mrs. Wharton is much stronger in dramatic narrative and emotional scenes than in psychological analysis and scientific adventure, where the temptation to say something important leads her perilously near to nonsense. When one is discussing small affairs, there is at least an irritating pretentiousness in such phrases as "the tolerance which allows for the inconscient element in all our judgments"; "caught in the inexorable continuity of life"; "reaching out for ultimate relations." This is the language of a text-book or a philosopher, not of a simple story-teller with a particle of sense for style.

Mrs. Foote long ago arrived at a pleasant mediocrity in the art of story-telling, and rarely either rises above or falls far below her own standard. With the heat and roses of California, the dust of Idaho, the desolation of the alkali desert, a miner, or a soldier, or a cowboy and a girl, she can be relied on to concoct an agreeable tale. Her latest volume, made up of all these ingredients, is just as agreeable as its predecessors. There is a good deal to amuse, a good deal to skip, and nothing to do any harm. Mrs. Foote's tales can never be responsible for such deplorable influence or conduct as is attributed to Tolstoy and Turgeneff by her Miss Benedet, the smirched heroine of 'A Touch of Sun.' This young lady, having been left without society on the paternal ranch, sought solace in literature, and, to use her own words, had her first great orgy of the Russians. The result was disastrous, for when she went out to ride, her mind dwelling on her books, on "men and women who knew no curb, who stopped at nothing, and who paid the price of their passionate mistakes," she rode out of bounds with a handsome cowboy, and, though almost immediately returned to her home by a benevolent stranger, she had out of the escapade the satisfaction that may lie in paying tne price of a passionate mistake. San Francisco was scandalized beyond expression, and never again looked kindly upon Miss Benedet. It may be inferred from these stories that the Spanish-American war made a deeper emotional impression in the West than in the East. Mrs. Foote's imagination, at all events, has been touched by it, and she quite makes a point of weeping over the heroes who died in Cuba for the Cubans.

The gentleman of the old South is a cherished figure in fiction. Pompous, punctilious, polished, more or less a graven image, we have long loved and revered him. If the author of 'The Circle in the Square' may be believed, nothing that pertained to the old South is so extinct as is its once imposing gentleman. With his lands and slaves, his Latin quotations and pleasant vices, he has vanished, surviving only as an historical portrait survives in a national gallery. The gentlemen of the new South, who dwell in the circle of houses built round the courthouse square, must surely keep the family portraits blushing and their ancestors perpetually turning in their graves. In their youth they appear to be little better than hoodlums, and in their middle age rather worse than the most vulgar and corrupt of Irish politicians. They speak a dialect which, when spelled phonetically, combines the negro and poor-white pronunciation, and their social condition is a hopeless mixture of barbarism and provincialism. We do not pretend to know whether the Berkeleys and Paiges and Fairfaxes of the 'Circle in the Square' would pass for gentlemen in the South, or whether the author may not be spitefully libelling a class; but it is certain that he has drawn his characters from life, and his drama from social conditions actually existing. His novel is poorly constructed, rather badly written, but surprisingly full of life and shrewd observation; altogether sincere and truthful. He feels the shame of much that he depicts, and in the development of Shan Morgan tries to express an ideal of a virtuous manhood of which the South seems to have urgent need. In regard to the negro question he is hotly prejudiced and blind. Since emancipation, he says, "the sons and grandsons of faithful, honest slaves have grown up into an immoral, lazy, dishonest class, which, no longer controlled by a superior race, and having by nature no self-control, despise (?) the white people, who have lost caste in their eyes by losing their authority." He does not appear to have noticed that on his own showing the race once superior has disappeared, and that the deterioration of the negro since the abolition of slavery is very inconsiderable beside that of the gentleman in the same period.

There is a great deal of manner about the tales in the volume entitled 'Sixty Jane,' and one cannot feel sure that it is ever the author's own manner. The title story and one or two others are experiments in the sentimental emotional manner invented by Dickens; the Japanese things are impressionistic, reminiscent of Pierre Loti, while the "Lady and her Soul," and "The Atonement" are purely in the later Henry Harland manner, with all its artificiality and none of its grace. "Lucky Jim" has the least affectation, and makes a profoundly pathetic impression. One wonders whether the incident is taken from life, and whether there is a State in the Union where a child of nine can be sent to work in mines with a chain-gang and kept there for a score of years, hidden from the sunlight, practically buried alive.

'The Spirit of the Whip Hand' is a primitive American spirit, languishing in the East, but apparently still vigorous in Chicago and the pine lands about Lake Michigan. Jack Halloran, the hero, is a poor youth who pays for his education by doing odd jobs, and then settles down to make his living by honest toil in the lumber business. He puts up singlehanded a fight against a lumber Trust, and wins with considerable pluck and gallantry. His character is strong, his adventures are thrilling, and if there are many men like him in the West the Republic is indeed safe for a long time. The author unfortunately knows very little about the art of novel-writing, and has adopted innumerable devices for encumbering his narrative and weakening the proper effect of his central figure.

'The Holladay Case' is a detective story with a family resemblance to the "Sherlock Holmes" series. It must be read with that complete indifference to probabilities which these romances exact from their admirers. It is one of the postulates of a detective story that everything shall be possible, up to a certain point, for the villains, while everything is impossible, up to the same point, for the detectives. The result is a sort of nightmare, as in the story before us. Life in Wall Street, or in any street, has even more risks than one takes account of if a start of surprise can make a Wall Street magnate stab himself to death by accident with his own penknife. That was what happened to Mr. Holladay, and suspicion naturally fell on the person who caused the surprise. The confidential clerk swore that this was Holladay's daughter, dressed in red, whereupon the lawyer, who is the Sherlock Holmes of the tale, easily proved that the clerk was color-blind, so that the murderer must have been dressed in green—a color that Miss Holladay never wore. But the exoneration of Miss Holladay is not the main interest, which centres in the conspiracy of a Frenchman to substitute his French wife for the American heiress. This young and energetic woman is accordingly kidnapped from her house in Fifth Avenue, confined for a while in Houston Street, and shipped to France with perfect ease. At this point the intelligence of her friends begins to work, and the game is up. Anyone with a taste for Conan Doyle who

can do without the personality of Holmes may be recommended to read this story.

TWO ESSAYISTS.

Ponkapog Papers. By Thomas Bailey Aldrich. Boston: Houghton, Mifflin & Co. 1903.

Varied Types. By G. K. Chesterton. Dodd, Mead & Co. 1903.

How it would have diverted Charles Lamb that any man's destiny should set him down to live at Ponkapog; that he should label his books with that terrific word, and become so enamored of its alliterative sound that, when away from it, he could feel at home only in a mountain retreat named Porcupine! In these days of cheap and hurried writing, Mr. Aldrich's reflections preserve an air of humorous leisure—that air of making a business of contemplation which was poor drudging Elia's most artistic achievement. We may be sure that, for Lamb's imagination, as he sauntered through Poplar or Islington, the old-clothes shops had suggestions such as came to Mr. Aldrich in the Bowery. "The contents of the dingy shops seemed to have revolted, and rushed pell mell out of doors and taken possession of the sidewalk. One could fancy that the rebellion had been quelled at this point, and that those ghastly rows of complete suits strung up on either side of the doorways were the bodies of the seditious ringleaders" (p. 7).

A third of this little volume is made up of short studies for essays, stray suggestions, often all the more effective because the reader's imagination is merely given a lift and left to mount alone: "Imagine all human beings swept off the face of the earth, excepting one man. Imagine this man in some vast city, New York or London. Imagine him on the third or fourth day of his solitude sitting in a house and hearing a ring at the doorbell" (p. 8). Since nothing that he might find on the doorstep could come up to the forebodings of that first stunning moment, Mr. Aldrich wisely leaves the modern Crusoe in his chair. The essays themselves, with one or two exceptions, are only a matter of two or three pages. The longest is a really charming study of Robert Herrick, with whose delicate and fanciful genius Mr. Aldrich has a natural sympathy. To Emily Dickinson (whose admirers will not like the title of this essay, "Un Poète Manqué,") Mr. Aldrich allows fancy but not much imagination:

"The incoherence and shapelessness of the greater part of her verse are fatal. On nearly every page one lights upon an unsupported exquisite line or a lonely happy epithet; but a single happy epithet or an isolated exquisite line does not constitute a poem. . . . A shy New England bluebird, shifting its light load of song, has for the moment been mistaken for a stray nightingale."

What he cannot forgive is the affectation which, as he thinks, made Emily Dickinson deliberately disregard form and finish.

Mr. Aldrich lives with such queer names that it is natural to find him writing an essay on them. "Fleabody and Other Queer Names" was suggested by Anthony Trollope's young woman from "the States," who bore the felicitous name Olivia Q. Fleabody, probably derived from Peabody—a name which Trollope may have thought more humorous than his own, so unconscious are we of anything queer in the names we bear or live with. Mr. Aldrich is amusing on Barry Cornwall, whose fatuous lines,

> "The sea! the sea! the open sea!
> The blue, the fresh, the ever free!"

have burned themselves into most memories like other silly lines about the ocean written for the most part, as these were, by poets who had never been out of sight of land.

While Mr. Aldrich loiters in the by-paths, Mr. Chesterton drives fierce and fast along the main roads, and, on the whole, prefers the streets, since there one finds the crowd. It has been unfortunate for him that he made a reputation as a journalistic critic through his epigrams, which happened to catch the public taste as they appeared in the columns of the *Daily News*. His Life of Browning in the "English Men of Letters" series proves that he is not merely a writer of glittering paradoxes, but a critic with imagination, of all critics the rarest type. That a young and energetic critic should have a message to deliver, and should deliver it with emphasis, is, of course, not so rare; nor has Mr. Chesterton any essentially new message to emphasize. It is his gift of imaginative sympathy, his genuine seriousness, that set him apart among recent critics. One forgives his rather flashy epigrams and his flamboyant language as soon as one realizes that they are intended not only to surprise the reader, but to convert him; the founder of a new religion could not be more in earnest than Mr. Chesterton. He is, of course, not the first to assert the magic and mystery of the surface of life, that the commonplace is a miracle waiting to be realized by us who look on it with indifferent eyes. No one can have read Maeterlinck and failed to see that the aim of all his symbolism is to make men realize the strangeness of the familiar; far from importing the supernatural into life, he tries to show that nothing is natural, nothing is banal—only one must strive after an intensity of intelligence that will give one the power to look at things as though one had not seen them before; everything is symbolic to those that have eyes and see. Maeterlinck's is the appeal of the mystic. The appeal of the critic is to less excited nerves, and not through symbols, but the end is the same, to sharpen our recognition of common things, of the stupendous facts that men regard with such indolent tranquility:

"There runs a strange law through the length of human history—that men are continually tending to undervalue their environment, to undervalue their happiness, to undervalue themselves. . . . This is the great fall, the fall by which the fish forgets the sea, the ox forgets the meadow, the clerk forgets the city, every man forgets his environment, and, in the fullest and most literal sense, forgets himself."

Mr. Chesterton adores his own century, and abhors the decadent who would have felt more at home in any other. He has hardly more patience with such an ideal as that of William Morris, with his æsthetic reaction that some people mistook for a revolution:

"The men of the time of Chaucer had many evil qualities, but there was at least one exhibition of moral weakness they did not give. They would have laughed at the idea of dressing themselves in the manner of the bowmen at the battle of Senlac, or painting themselves an æsthetic blue after the custom of the ancient Britons. They would not have called that a movement at all. Whatever was beautiful in their dress or manners sprang honestly and naturally out of the life they led and preferred to lead. . . . This was the weak point in William Morris as a reformer—that he sought to reform modern life, and that he hated modern life instead of loving it. . . . The spirit of Morris has not seized hold of the century and made its humblest necessities beautiful. And this was because, with all his healthiness and energy, he had not the supreme courage to face the ugliness of things; Beauty shrank from the Beast, and the fairy tale had a different ending."

It is no reflection on the genuine originality of Mr. Chesterton to say that he occasionally recalls Stevenson:

"It is useless," he writes, "to deny that the miracles of science have not been such an incentive to art and imagination as were the miracles of religion. If men in the twelfth century had been told that the lightning had been driven for leagues underground, and had dragged at its destroying tail loads of laughing human beings, and if they had been told that the people alluded to this pulverizing portent chirpily as 'The Twopenny Tube,' they would have called down the fire of heaven on us as a race of half-witted atheists."

Stevenson, not so profoundly modern as Mr. Chesterton, pleads for the "old mild lustre" of gas-lamps in a passage that the younger critic may have echoed half-consciously; at any rate, the parallel is interesting if only because it reflects a real difference of style:

"Mankind, you would have thought," wrote Stevenson, "might have remained content with what Prometheus stole for them, and not gone fishing the profound heaven with kites to catch and domesticate the wildfire of the storm. Yet here we have the levin brand at our doors, and it is proposed that we should henceforward take our walks abroad in the glare of permanent lightning. A man need not be very superstitious if he scruple to follow his pleasures by the light of the Terror that Flieth."

In the matter of style, Mr. Chesterton has something to acquire and much to get rid of. The man who makes epigrams should, like the liar, have a long memory. But while the liar must keep his lie set up and ready for a new impression, the author of an epigram should break up his type forthwith. Mr. Chesterton's new volume scintillates with stale epigrams. In the essay on Tolstoy, in which he demonstrates the appalling strength of the doctrine of mildness and non-resistance, he remarks that in Tolstoy's mythology "St. George did not conquer the dragon; he tied a pink ribbon round its neck and gave it a saucer of milk." No one need be offended by this rather trivial conceit unless he should happen to remember Mr. Chesterton's criticism of the Greek notion of the monstrous. "It is extraordinary," he says in 'A Defence of Ugly Things,' "to watch the gradual emasculation of the monsters of Greek myth under the pestilent influence of the Apollo Belvedere. The chimera was a creature of whom any healthy-minded people would have been proud; but when we see it in Greek pictures we feel inclined to tie a ribbon round its neck and give it a saucer of milk." It never seems quite fair that a good story or a good epigram should not bear repetition; but it is a fact that Mr. Chesterton's very acute remarks on parody in his essay on Bret Harte lose much of their force for the reader who has just met the same phrases applied to satire in the essay on Pope.

In every essay some paradox is maintained, and with much ingenuity and conviction. Mr. Chesterton, having said to himself that he must be a very shallow critic who cannot see that black is white, and that Clapham is built on a volcano, introduces Charlotte Brontë or St. Francis or Pope merely as lay figures on which to drape these eternal truths. The result is hardly to be called literary criticism; what these essays state is a philosophy of life, with illustrations from literature. The statement is always sincere and robust, but it nearly always lacks the quality of style which would give it permanent value. It is not for nothing that Browning is Mr. Chesterton's favorite poet; like Browning, what he cares about is rather the thought than the expression of it.

It is characteristic of Mr. Chesterton's haste that the volume is full of typographical errors. The most serious of these for the reader is the interchange of the top lines of pp. 233-4; in the Essay on Pope the page-headings are out of order; on page 202 we meet with "Une rêve."

The Correspondence of William I. and Bismarck. With other letters from and to Prince Bismarck. Translated by J. A. Ford. Two volumes. Pp. xxiv., 221; xxx., 237. Frederick A. Stokes Co. 1903.

The title of this book is somewhat misleading, for while the first volume contains nearly two hundred letters and notes from William I. to Bismarck, and about one hundred from Bismarck to William I., the collection is hardly a correspondence: many of the communications are printed without the letters answering them or the letters which they answered. Much less should the collection be described as *the* correspondence between these historical personages; that is presumably locked up in the Prussian archives. Many of the royal letters are congratulations on birthdays and on other personal or family events, announcements of honors, thanks for services, etc. There is a little real correspondence, and correspondence of political interest, in the letters exchanged in connection with several of Bismarck's threatened resignations; and we are brought fairly into the field of political history in reading a few brief royal epistles written between 1863 and 1866. These are samples, evidently, of the "little notes" of which Bismarck frequently complained. They show what we knew before—that the King in no wise comprehended his premier's diplomacy and was often terrified by it. It was for this reason, probably, that Bismarck preserved them.

The premier's own letters are communications of which he preserved the draft or which were returned to him with royal comment. If a collector of autographs could have one, and but one, of the original letters, he would perhaps select, as characteristic of the two men, that in which Bismarck announced to the King that the troops of Napoleon III. had occupied the City of Mexico. The King, whose victories were at that time (1863) all in the future, returned this letter with the comment, "He is fortunate"; and Bismarck filed it away with the added comment, "Pourvu que cela dure" (pp. 23, 24).

Among the most interesting of Bismarck's letters is one in which, with extreme deference of manner and unwonted circumlocution, he suggests that a royal epistle already dispatched by courier to Queen Augusta should be recalled; because, as he humbly submits, if the news it contains regarding certain Austro-Prussian arrangements should indirectly reach Vienna, the Austrian Government would feel that there had been a breach of confidence, and the result of such a feeling might be war. The King promptly intercepted the letter by telegram (pp. 50-52).

The sub-title of the book, "with other letters from and to Prince Bismarck," describes the contents of the second volume, which are very miscellaneous. The letters from Crown Prince Frederick show that he was as little able as was his father to understand Bismarck's diplomacy before 1866. He desired the adoption of "a definite policy" in the Schleswig-Holstein question, and warned Bismarck against dreams of "expansion," because he feared that Prussia would "fall between two stools" (vol. ii., pp. 114, 115). What he meant, of course, was that Prussia would forfeit the sympathy of the German Liberals (who at that time wished to see the Augustenburg prince on the throne of Schleswig-Holstein) without securing the duchies for Prussia. The latest letters printed are from the spring of 1888. There are no letters from or to the present Emperor.

The collection contains material for the historian, but, excellent as is the translation, the conscientious historian will consult the German edition. Others, who buy the volumes in the expectation of finding a connected and self-explanatory "correspondence," will be disappointed. The selection is very arbitrary: it represents merely the personal interest which the letters possessed for Bismarck himself. The scanty notes translated from the German edition explain only such allusions as may perplex even a reader who is very familiar with the history of the period, and the notes added by the translator merely interpret a few technical terms and unfamiliar abbreviations. There are very few misprints; but the omission of a "not" in the opening sentence of the letter printed on page 57 of the first volume is destructive of the meaning. There is no index, but the table of contents is very full, indicating the subject of each letter.

Money and Banking: An Introduction to the Study of Modern Currencies. By William A Scott, Ph.D., Director of the School of Commerce and Professor of Economic History and Theory in the University of Wisconsin. Henry Holt & Co. Pp. x., 381. 1903.

The belated appearance of an adequate manual on money and banking gives fresh evidence of the erratic working of the law of supply and demand with respect to economic literature. For a decade or more, a conspicuous need of teachers and students of political economy in its practical aspects, both in this country and in England, has been a satisfactory text-book on the mechanism and technique of economic exchange. The place which up to that time had been fairly well filled by books such as Jevons's 'Money and the Mechanism of Exchange' and Francis A. Walker's Johns Hopkins University lectures on 'Money,' and, a few years later, by the same author's Lowell Institute course on 'Money, Trade, and Industry,' has become increasingly bare. Specific purposes have been served by the use of Laughlin's 'History of Bimetallism in Europe,' Taussig's 'Silver Situation in the United States,' Dunbar's 'History and Theory of Banking,' and Horace White's 'Money and Banking.' But, in the main, Professor Scott is entirely right in saying that the need of a suitable text-book on money and banking has been felt by every teacher of political economy, and that no one of the books available for the English-speaking student covers the entire ground in a comprehensive manner, and that few, if any of them, have been written with the needs of the student distinctly in mind.

It will be generally agreed that the present work is a cheering approximation to the desideratum thus indicated. The self-respecting teacher of political economy will probably continue to lament the absence of "a good text-book" on monetary theory and practice, and contemplate writing one for himself; but until this ideal be obtained, he will experience less embarrassment than heretofore in the selection of the least unsuitable manual. The merits of Professor Scott's book are an intelligent appreciation of the place of monetary phenomena in modern economic life, and an intimate acquaintance, born of successful academic experience, with student needs and difficulties in the study of the subject. The arrangement of chapters is convenient; the bibliographical apparatus is helpful.

Such defects as the book reveals are in large measure traceable to the embarrassment which the scientist as text-book writer inevitably experiences in harmonizing positive contribution with elementary exposition. As an original writer and thinker in monetary science, Professor Scott stands, like the group of careful students whom Professor Laughlin has trained, for trenchant criticism of the so-called quantity theory of money. A careful paper, published as far back as March, 1897, gave evidence of the vigor and originality of Professor Scott's thought in this direction. In the six years since elapsed, an important doctrinal controversy has developed, and while it would perhaps be an unreasonable demand that a substantial volume of four hundred pages emanating from one of the controversionalists should contain no contribution thereto, the penalty of unrestraint has been a certain incongruity in scope. The chapters dealing with the standard of value and the quantity theory of prices are pitched in a distinctly higher key than the bulk of the volume—not because these are abstruse, theoretical parts of the subject incapable of expression in words of one syllable, but from the fact that the expositor is here necessarily merged in the advocate. The reader feels that the assurance of the preface that, in considering debated issues, the author, while not attempting to conceal his own views, would present both sides of the question, has been observed scantily in letter and not at all in spirit. He feels it the more because, in other places, as in the discussion of the theory of bimetallism, the author's attitude is conspicuously judicious and well balanced.

Professor Scott's exposition of monetary theories would have gained in usefulness by some reference to their historical development. Thus, in discussing Gresham's

law, attention might properly have been called to the respective contributions to it of David Ricardo and Francis A. Walker, however vigorously the author dissent from the resultant. Almost alone among modern writers on money, the lamented Prof. Sidney Sherwood seemed to realize the importance of associating the history of monetary theories with the critical discussion of their actual content.

Bimetallism receives full and intelligent treatment at Professor Scott's hands, with the striking exception that no reference is made to the international negotiations carried on by the United States, through the agency of the Wolcott Commission, in the spring and summer of 1899. As bare of positive results as any of the international monetary conferences that preceded it, this effort is still of considerable significance in the history of the movement. England then for the first time learned of India's unwillingness to reopen her mints to the free coinage of silver; active and not-to-be-despised bimetallic agitation in France suffered a crushing reverse; and, most important of all, a considerable body of thoughtful people in the United States then became convinced of the utter futility of further striving towards international bimetallism, and, consequently, of the impracticibility of any other course than the adoption of the gold standard by the United States.

Despite the author's evident painstaking care, certain omissions and infelicities have crept in, to be eliminated in the future editions which there is every reason to anticipate. We note only the phrase "to put it up" (p. 8) in the sense of "to use"; the statement (p. 131) that one of the advantages of bank currency is that the stub of a checkbook constitutes a convenient record of expenditures; and the apparent omission from the detailed list of references of Launhard's discussion of the quantity theory noted on page 68.

The History of the Talmud, from the Time of its Formation, about 200 B. C., up to the Present Time. By Michael L. Rodkinson. New York: New Talmud Publishing Company. 1903. 2 vols. Pp. x., 160, vi., 106. Portrait.

The translation of the Talmud by Dr. Rodkinson we have dealt with briefly in "Notes," volume by volume, as it appears. It may be in place, however, in connection with this introductory history, to discuss somewhat more exactly the general plan of the work. With the storm which greeted the first volumes, but which now, happily, is blowing over, we have nothing more to do. Its causes were evidently in great part personal and racial. Dr. Rodkinson's work, on the other hand, has now passed to a public beyond all such limitations and jealousies.

He is, evidently, a most learned Talmudist of the ancient type. Further, he has largely succeeded in adding to this early training much of the tone and attitude of modern scholarship. To completely make over a student from the Russian rabbinical schools into a graduate of one of our Western universities is manifestly impossible, and probably undesirable. But that one who dabbled in his early days in books of fate and the mysteries of Zohar should come, in his later years, to be the translator of the Talmud into English, and English most able and nervous at that, is only another proof of the possibilities inherent in the Jewish race and of the transforming and assimilating power of our civilization. But, in part, the form of his enterprise has been *malgré lui*. This translation is only an appendix to a much larger scheme, an edition of the Talmud in the original. The Talmud, as yet, has never been edited; many have shrunk from the task on religious grounds; others because of the hopeless labor—hopeless on account of the size of the book and the inadequacy of the materials. Others, more reasonably, have urged that it would be unscientific and impossible to reduce to a precise text a book that originated orally, was long transmitted orally, and never, perhaps, reached a fixed recension. The problem, thus, is much that of editing the Arabic text of 'The 1,001 Nights,' a similarly gigantic oral and floating compilation, and raises the question, What is the text to be edited? In the case of 'The Nights' the problem has been solved by leaving the original alone and producing eclectic translations. Such, too, is the solution to which the logic of the case has forced Dr. Rodkinson. His revised text is still unprinted, but his translation, pruning repetitions and absurdities, combining, arranging, and paragraphing, is now well advanced in publication.

That such a method, inevitable though it may be, would arouse criticism was to be expected. Worshippers of the printed text, to whom every repetition was sacred, and reverencers of the critical faith that is in MSS. were equally scandalized. Besides these ungrounded panics, a genuine cause for fear undoubtedly lay, and lies, in the liberty which Dr. Rodkinson claims to strike from his translation what for him is too manifestly absurd to have been uttered by any sage of the Talmud. There are, he holds, many such interpolations made by enemies to cast ridicule on the book and its methods. The reply to this can only be that it is for each reader to judge as to degrees of absurdity; much of the kind, and most mirthful, too, has been left in this translation. But, for all this chance of disagreement, the translation should be heartily welcomed, and the iron industry of the translator—brazen-bowelled as was ever Greek grammarian—must be admired and commended. He is doing a piece of work of which he may well be proud, and setting an example of broad treatment to Western scholars, who too often give to details the time which should yield results.

Practically the same must be said of the present historical introduction. Few modern students will admit Dr. Rodkinson's view of the beginnings of the Talmud; his learning none will doubt. The later history is well told, and especially that in which the writer himself had a part. Generally, if the unlearned reader will bear in mind that he is dealing with a product of the traditional rabbinical school, he may trust himself safely to this guidance. And nowadays one has to bear in mind that every book is the product of some school or other. We wish Dr. Rodkinson, then, health and vigor for his long task.

Anna Swanwick: A Memoir. Compiled by her Niece, Mary L. Bruce. London: T. Fisher Unwin. 1903.

Beyond the small group of those who, caring for Goethe and Æschylus, care only enough to read them in translations, the name of Anna Swanwick must be wholly unfamiliar. Few writers have secured a reputation solely on the grounds of a successful translation. North's 'Plutarch,' Cary's or Carlyle's 'Dante,' suggest some of these exceptional persons whose names are forever linked to the classic masterpieces over which they unselfishly toiled. Such a one as they was Anna Swanwick; but when she chose the translation of "Faust" and the dramas of Æschylus for her life-work, she lighted on masterpieces of which a final translation can never be made, and certainly no translation which for any length of time will satisfy the demands of the scholar who is a literary critic. For a decade or so, however, to read Æschylus in English meant, in England at least, to read Anna Swanwick. Her fashion has passed; Morshead or even Professor Lewis Campbell has taken her place in a generation that is not to be put off with "graceful" and "elegant" versions of poets who are neither elegant nor graceful. Miss Swanwick's translation of "Faust" has also been superseded, notably by that of Mr. Webb; but hers will always rank among the best, and, since it includes the Second Part, has a special value. About the time when she was translating Goethe, Carlyle was making the study of German literature fashionable, and she profited by an enthusiasm that demanded translations of Freiligrath for the provincial papers.

Miss Swanwick, who died in 1899, lived through eighty-five years, in which a visit to Berlin and a tour in Switzerland were the only recorded events. A life spent in a drawing room on the edge of Regent's Park may, of course, be as dramatic in its way as Cleopatra's if one could but learn the secrets of it. But Miss Swanwick's biographer had no written material, no *journal intime*, to inspire her, and she was reduced to collecting from Miss Swanwick's friends testimonials of her life and character, which are dull as such things must be even when they are written by the master of Trinity and Mr. Bryce. Among the intimate friends of Miss Swanwick were Mr. Gladstone and Mr. Lecky, and many other distinguished men, such as Dr. Martineau and Francis Newman, who were attracted to the quiet house in Cumberland Terrace by the personal charm and conversational powers of which we get no glimpse in this memoir.

The recent publication of Mr. Morley's Life of Gladstone adds interest to a passage in a letter by Miss Swanwick. She was breakfasting with Gladstone soon after the appearance of Morley's Life of Richard Cobden.' Mr. Gladstone spoke with appreciation of the book,

"while at the same time giving expression to the opinion that, in delineating the character of his hero, the biographer had not done justice to the religious element, with which he had evident sympathy. . . . Mr. Morley's rejection of religion leaves unexplained the fact that the existence of a Power beyond humanity has been recognized in every age and every clime. That Mr. Cobden recognized that Power and experienced the religious emotions consequent upon that recognition, appears from passages in his 'Life' which tend to

refute Mr. Morley's judgment as to his negative attitude towards religion, and to confirm Mr. Gladstone's opinion as expressed above."

Miss Swanwick was an advocate of woman's rights, but she was not of the militant type. In fact, it seems that she, like many Englishwomen, were roused to self-assertion by the treatment of a

"noble band of women workers, headed by Lucretia Mott, who came from Massachusetts . . . to join a great anti-slavery convention in London in 1840. When the meeting opened, these ladies were refused admittance on account of their sex! . . . This flagrant act of injustice planted the seed of discontent in many a woman's mind, and Anna Swanwick, feeling within her the same spirit that animated Lucretia Mott, . . . determined to help her sex to take their proper place in the body politic" (p. 158).

This sectarian action on the part of the "World's Convention" may be studied in detail in the 'Life of Garrison.'

We might dwell on Miss Swanwick's charities and her work in the cause of the education of women, but that not to have had such interests would be surprising in an unmarried woman of some fortune and much intelligence. She was educated by Dr. Martineau and Francis Newman, the cardinal's gifted brother. After all, a women's college must have seemed a makeshift to one whose own training had been so liberal yet so informal.

In Search of a Siberian Klondike. Narrated by W. B. Vanderlip, and edited by H. B. Hulbert. The Century Co. 1903. 8vo., pp. xviii., 315.

The northeastern extreme of Siberia is one of the regions of the earth least known to the general public, and even to the geographer. A century ago it was the scene of explorations of which the records are among the rarities of a geographer's library. Later the penetration, by the American whaling fleet, of Polar waters beyond Bering Strait made the shores and native inhabitants better known to the navigator; and the visit of a few vessels connected with the search for Sir John Franklin gave occasion for one or two popular narratives, now almost forgotten. In 1866-8 the explorations for a telegraph line to connect the two continents by way of Bering Strait were instrumental in giving us the first modern descriptions of the interior, in volumes by Bush and Kennan. With the exception of some reports by military or naval officers concerned with the *Jeannette* rescue expedition, or the voyage of the *Vega*, and necessarily of a rather superficial character, nothing of any value has been written since, for the general reader.

After the discoveries of gold in the Klondike and at Nome, it was natural that the prospector should endeavor to discover whether the belt of gold-bearing rocks so productive in the Yukon territory and Alaska is or is not continued beyond the straits on the Asiatic side of Bering Sea. Knowing that, where the two continents approach most nearly, the character of the rocks on the two sides is strongly contrasted, those familiar with these shores were the least hopeful. But the unexpected frequently happens in mining matters, and not a few were willing to risk the cost and labor of exploration to determine the actual state of the case. Mr. Vanderlip, a professional prospector, who had been engaged in mining in Korea, had the idea of offering his services for this purpose, and, proceeding to Vladivostok, was immediately engaged by a Russian firm with the full approval of the local authorities.

His instructions contemplated prospecting in Kamtchatka near Petropavlovsk, along the eastern coast of the peninsula and on the Commander Islands; then on the northern and eastern shores of the Okhotsk Sea, and northeastward into the interior, as circumstances might seem to indicate. He was supplied with documents, authorizing him to call upon Russian officials for whatever help he needed, whether subsistence or transportation, and took with him a supply of such trading goods as are necessary to pay one's way among uncivilized people and in a country where money is practically unknown. The Russian Chartered Company holds the monopoly of the fur trade in these regions. An annual vessel visits the various ports where business is done, carrying supplies of all sorts and bringing back the annual stock of purchased furs. On the same vessel the Russian governor-general makes his yearly inspection of the convict settlements on Sakhalin Island and the trading posts on the Russian coasts of Bering Sea, as far north as the Anadyr River. This being the only means of reaching Kamtchatka short of chartering a private vessel, Mr. Vanderlip embarked with his cargo, two Korean miners, and a young Russian of some education.

Leaving Vladivostok on the 22d of July, on the steamer *Cosmopolite*, the first stop was made at the convict station of Korsakovsk on the island of Sakhalin. Here are sent only the most hardened criminals, mostly murderers (for there is no capital punishment except for treason in Russia, and political prisoners are not sent to Sakhalin). After a stay of a few hours the steamer proceeded, with the intention of rounding the southern end of the island, but about eight o'clock in the evening brought up in the fog on the rocks of the coast and became a total wreck, fortunately without loss of life. The party returned to Korsakovsk, and a relief steamer, secured by telegraph, arrived in about six days. In spite of the loss of his equipment, Mr. Vanderlip decided to continue on his way and live off the country. Petropavlovsk was reached, and the supposed copper deposits examined, but without discovering any economically valuable ore. Thence the party proceeded to the Okhotsk Sea, touching at the Tigil River on their way to the Ghijiga River and Settlement.

From Ghijiga as a centre, prospecting was done in various directions covering the headwaters of the river and both slopes of the adjacent portions of the Stanovoi range of mountains. Much of the time the party was among the uncivilized Korak tribes, of whom interesting details are given. Nowhere was gold found in paying quantity. Subsequently a trip was made to the northeast through the Chukchi country across the neck of the peninsula to Bering Sea and along the coast to Baron Korff Bay, and, finally, after much hardship, back again to the Okhotsk coast and Ghijiga. Of the Chukchi, Mr. Vanderlip speaks in the highest terms, and apparently with good reason. He says of the object of the expedition: "Though there may be gold within the radius that I covered, I satisfied myself that there were no extensive auriferous deposits on the streams flowing into the Okhotsk Sea near its head, nor in the beach sands along the shore of Bering Sea south of the Anadyr River."

During the succeeding spring, Mr. Vanderlip, with a chartered vessel and a large party of Russian miners, carefully examined the shores of the Chukchi peninsula from the Arctic circle round to Anadyr Bay, finding large deposits of lignitic coal west of Plover Bay, but no indications of the precious metals in quantities to pay for mining, thus confirming the unfavorable opinion which had been held by those previously most familiar with the coast in question.

While the narrative makes no pretensions to literary merit, it is a straightforward and interesting account of experience, enlivened with a vein of genial humor. Of its fidelity to truth there can be no question, and the narrator's observations on the manners and customs of the native people with whom he was so intimately thrown, make excellent reading. Among those living in the interior, during more than a hundred years since they were first visited the changes appear to have been very slight. The singular custom of intoxication by means of the dried toadstool (*Amanita*) is still continued by the Koraks as the earliest travellers described it. The coast Eskimo, or "sedentary Chukchi" of the earlier accounts, have suffered much from the introduction of liquor and disease by visiting traders. The true Chukchi, or "deer men," remain as formerly a bold and energetic race, untaxed and unconquerable, meeting the white man (other than the hated Russian) with the courtesy of an equal and with generous hospitality.

The book is well printed, with many excellent illustrations from photographs by the author, but would have been more complete had an index been provided.

The New Era in the Philippines. By the Rev. Arthur J. Brown, D.D. Fleming H. Revell Co.

This lucubration should have been put forth as a pamphlet on Protestant missionary work in the islands, or as a tract, in which sort of document the author might be presumed to have a right to quote poetry and prose philosophy (of most recent production) to his heart's content. It has no claim whatever to being "a vigorous statement of the conditions and needs of our new possessions, written from personal observation." The author is Secretary of the Presbyterian Board of Foreign Missions, and spent two months, more or less, in 1901, visiting Manila and a few points in the Bisayas. All but the first nine of the twenty-nine chapters are devoted to matters related to the Protestant missions and their work. From the standpoint of one who believes that the regeneration of the Filipinos depends upon Protestantizing them, and that the masses of them are eagerly waiting to have this transformation worked in them, Mr. Brown's sermon —for it would best have been delivered as such—is a very fair sort of argument. To hold him strictly to facts, however, would disturb his logical sequence not in-

frequently. He thinks the former friar-priests very rarely preached to the Filipinos; is unaware that occasional Protestant proselyters from Spain and England were not slaughtered outright in cold blood by cruel Spain for preaching and introducing the Bible; apparently regards the recent translations of the Bible into Tagalog, Bisayan, and other dialects as most scholarly performances; seems to think it strange that the Spanish Governor-Generals "had no scruples about supporting the Church, not only personally, but also officially," when by their position they were the Vice-Royal Patrons of Religion, as representatives of the King of Spain; and gravely pronounces the Jesuit Observatory (established in 1865) the greatest thing the Roman Catholic occupation ever did for the Philippines. He cites as one of the Protestant missionaries to whom "no other Americans there can give points on tact," a man who recently, for the fortieth time, in a public sermon in Manila warned Americans to beware lest the Filipinos should repeat on them the history of the Sepoy rebellion and massacres. He appeals for Protestant schools in the islands on precisely the same grounds on which the Roman Catholic prelates there have based their opposition to the public schools, thereby incurring his censure. Bishop Salazar, too, felt, over three hundred years ago, that Providence was bringing the Chinese to the Philippines to be made Christians. In the same vein the reverend author urges free admission of Chinese, coolies and all, to the Philippines. He last year published a report in which he said they were "so absolutely indispensable to industrial and commercial development" that without them we shall "never get out of the Philippines more than half of what they will cost us."

As to the chapters devoted to Philippine conditions in general, which alone can justify putting this book out as one to enlighten the public about our new problems, the less said the better. They are full of such errors as calling the Indonesian hill tribes of Mindanao Mohammedans, and saying that "Spain never attempted a real occupation" of Samar, and of such snap-judgments as the assertions that Legaspi's successors as Governor-Generals were, "with few exceptions, cruel, avaricious, and corrupt." Taken as a whole, this book is only another illustration of the inconsequent way in which so many Americans are just now rushing into type.

The Devils and Evil Spirits of Babylonia: Being Babylonian and Assyrian incantations against the demons, ghouls, vampires, hobgoblins, ghosts, and kindred evil spirits, which attack mankind. Translated from the original Cuneiform texts, with transliterations, vocabulary, notes, etc. By R. Campbell Thompson, M. A. Vol. I. "Evil Spirits." London: Luzac & Co. 1903.

This work in two volumes, of which the second is yet in the press, contains the English transliterations and translations with brief notes of the collections of evil-spirit texts published by the trustees of the British Museum in the sixteenth and seventeenth parts of "Cuneiform Texts from Babylonian Tablets, etc." These texts are contained in about 240 tablets and fragments in the possession of the British Museum, for the most part from the library of Ashurbanipal, of which 160 are now published for the first time. They contain copies of all the tablets belonging to the series on "Evil Spirits," "Fever Sickness," and "Headache." Although one of these tablets is dated as late as "the one hundred and eighth year of Seleucus and the forty-fourth of Antiochus," and none of them is earlier than the time of Ashurbanipal, nevertheless, all are written in Sumerian, generally with a Semitic interlinear translation, and it may fairly be assumed that they represent the magical-religious ideas of the pre-Semitic population of Babylonia, 4000 B. C. or even earlier. When the Semites entered the country they seem to have been little more than nomads, with a very rudimentary civilization and unformulated religious ideas, so that they readily took over, practically in their entirety, the Sumerian devil and evil-spirit doctrines. From them these doctrines, with the magical practices connected with them, spread to the Hebrews and other western Semitic populations, and ultimately through them reached and affected Europe. The famous Lilith, the wife of Adam in Rabbinic lore, is a name borrowed from the old Sumerian, where, in both the masculine and feminine form, it represents some kind of ghost; and the conception of the marriage of a man with a *lilith* is borrowed from the same source. Similarly, the word *shedim*, a common word for demons in the Hebrew prophets, is borrowed from the ancient Sumerians.

The ghost or departed spirit played a prominent part in Sumerian demonology, and one important form of sorcery practised among the Babylonians and Assyrians, as also among the Hebrews, by ultimate derivation from the Sumerians, was the raising of the departed spirit. The spirit of the dead naturally descended into the underworld, the house of darkness, where it eked out a wretched existence, depending, in part certainly, on the attentions of the living, the libations offered by its descendants or kinsfolk. If these libations failed to be offered, then it was liable, forced by the need of subsistence, to come back to earth, where it wandered up and down seeking some luckless wight with whom it had a past connection, either of kinship or of hospitality, by grace of which it could plague and torment him until such time as it was exorcised by a priest. Similarly, the ghosts of unburied or uncared-for men and women, the spirits of those who died violent or unnatural deaths, and particularly of women who died in childbed, returned to earth to haunt and harass the living. There were also ghouls, hobgoblins, and fiends of various descriptions who inhabited desert places, ruins, old tombs, and the like. Most famous and often mentioned in these incantations are the seven evil spirits, who appear even in the New Testament and in post-Christian Syrian charms. Mr. Thompson, in his introduction, gives an admirable summary of what is now known of all these spirits and demons who were the authors of the ills that befall mankind—sickness, loss of offspring, storms, whirlwinds, and the like, and the methods by which they were exorcised.

The texts printed in this volume are connected especially with Eridu and its god Ea. Through Ea and his son Marduk is obtained the information by which the spirits are to be exorcised, and frequent mention is made of the incantation of Eridu. Water is a common element in these exorcisms, as the element of Ea in which his essence was supposed to be always present. Besides water, we find meteoric stones, branches (especially of a certain plant, *kishkanu*, also from Eridu), and spittle, used as the materials of exorcism. The incantation often takes the form of a story of the way in which the gods overcame the evil spirit to which some particular malady or misfortune was attributed, with mention of the name of the spirit, as evidence of that knowledge on the part of the exorcist which is power. A good example of this type of incantation is the exorcism of the worm, to be used in case of toothache, "believed to be due to the gnawing of small worms." This commences with the creation of the world—the heavens by Anu, the earth by the heavens, the rivers by the earth, the canals by the rivers, the marshes by the canals, and the worm by the marshes. The worm then weeps before Shamash and Ea, asking what shall be its food. It is given, among other things, dry bones for food. Then it says (p. lxiv.):

> "Let me drink among the teeth,
> And set me on the gums;
> That I may devour the blood of the teeth,
> And of their gums destroy their strength."

The exorcist, having thus shown his knowledge of the cause of the toothache, is instructed to utter his exorcism thus:

> "O Worm!
> May Ea smite thee with the might of his fist!"

It is an incantation of this sort of which a part was mistaken by Sayce and Pinches for the Babylonian story of Eden. This text, to which considerable additions have now been made, Mr. Thompson shows satisfactorily had nothing whatever to do with the myth of Eden, but is, in fact, an incantation of Eridu, in general character not unlike several others contained in this volume.

The book, both in its introduction and in the texts here presented, is a valuable contribution to the study of primitive religious ideas in general, a value which is vastly enhanced by the fact that it is this Sumerian demonology in particular which is the direct ancestor of the witchcraft and spirit lore of the entire Western world. In mechanical execution the book is admirable. It is sightly to look at, convenient in size and weight, with paper of good body, generously spaced and margined. It is volume xiv. in Luzac's "Semitic Text and Translation Series."

The Influence of Christianity upon National Character, Illustrated by the Lives and Legends of the English Saints. Being the Bampton Lectures preached before the University of Oxford in the year 1903 by William Holden Hutton. E. P. Dutton & Co. 1903.

In Mr. Hutton's 'English Saints' the inspiration of genuine devotion has enabled the writer to put himself in perfect sympathy, one may say, with the gentle souls who took refuge in convent or wilderness from the brutalities of mediæval life, as well as with those other ardent and perhaps more praiseworthy spirits who stood their ground in the midst of the evil of the world and endeavored to subdue men to the likeness of their Master. Only here and there does the author's clerical bias lead him to extend unduly the same sympathy to men whose claim to saintship rests rather on their services to ecclesiastical organization than

on the exhibition of a spirit of self-abnegation and unworldliness. The modern reader inevitably views with suspicion the very title of the sixth lecture, "The Statesmen Saints," and, notwithstanding the glamour of mediæval tradition, there is little in the career of St. Thomas of Canterbury, for instance, to lull that suspicion. From a similar point of view, one cannot but regard as a mistake the inclusion in this volume of King Charles I., in whom, if there was indeed any saintliness, there went along with it so much wrongheadedness and folly that only a High Churchman can see the former.

With the exception of a hitherto unprinted life of St. Edward the King (from a manuscript in St. John's College, Oxford) the book cannot be said to contain anything of original value; but in fulness of knowledge and accuracy of statement it meets all the demands of scientific criticism, and will be read with pleasure even by professional students of the Middle Ages. Many readers will regret, however, that the author should have given expression to his belief in the hideous story once connected especially with the name of St. William of Norwich, which has again during the present year, in the massacres of Kishenev, done such fatal service in the cause of superstition and inhumanity.

BOOKS OF THE WEEK.

The Nation.

NEW YORK, THURSDAY, DECEMBER 31, 1903.

The Week.

Enough is known of the protest filed with the State Department by Colombia to make it clear that it is a document to be reckoned with. The discreet ability displayed by Gen. Reyes and his associates has been, in fact, highly notable. They have not blustered or threatened war—on the contrary, they have labored with wonderful success to still warlike passions in Colombia. War, they say, would have been a fatal blunder. It would have been playing the game of American Jingoes. Much wiser as well as more humane was the course actually pursued. The Colombian representatives have taken the position of a lawyer with a good case. He does not begin promiscuous shooting, but goes to the courts. It is really also a tribute to the American Government which Reyes and his advisers have paid in assuming that it would give a fair hearing to an argument going to show that it had proceeded improperly, and had laid itself open to a claim for substantial damages. The net result is certainly to cloud the title which we set up to the Isthmian canal. Our right is by no means so clear as was at first glibly asserted. Grave questions of treaty interpretation are involved, as well as of correct procedure under the general provisions of international law; and all these matters are presented with force by the Colombian envoys and the able counsel they have employed. Their protest we are bound to consider seriously. Arms we would have met with arms, but reason we must encounter with reason—better reason, if we can produce it; if not, with frank admission that we have been in the wrong. And if, failing agreement between ourselves and Colombia, the solemn appeal is made that we refer the points in dispute to the Hague Tribunal, this Administration could not think of refusing to do so. We who urged Germany to go there to adjust the Venezuelan controversy, could not decline to submit our own differences with Colombia to the same high arbitrament without exposing ourselves to the scorn of all mankind.

President Roosevelt was almost dithyrambic in his message when he came to speak of the way in which "the people of Panama rose as one man." But his stanch defender, the New York *Tribune*, printed on Monday a letter from a special correspondent at the Isthmus, who declares in so many words that the people had nothing whatever to do with the revolution. "Seven men, aided by the soldiers and others whose support had been purchased, were alone responsible for the sudden revolution in the political status of Panama." "Were the people of the other provinces consulted? They were not. Were the people of Colon and Panama let into the secret? They were not." We cannot congratulate our contemporary on its enterprise, since the *Evening Post's* correspondent gave exactly the same facts on December 8; but we do compliment it on its journalistic fairness in printing a truthful account of what actually occurred, even though the result is to destroy the official Republican version. Genuine republics are certainly not created by such hole-and-corner conspiracies as this letter details. A mercenary plot with a bribery attachment is seen to be the true origin of this "new birth among the nations." Everybody knows it for the fictitious product it is; and everybody will be correspondingly glad when some sensible arrangement is made to restore Panama to Colombia and get the canal without suspicion of fraud. A revolution in which the people had absolutely no part might easily be made to go backwards.

The "authorized announcement" that President Roosevelt has promised not to make Gen. Wood lieutenant-general of the army was no sooner in print than it was denied by the Senator to whom it was said to have been made. It was stated that this assurance had done much to conciliate Senators who are uneasy about Gen. Wood, because they wish to see him a major-general and nothing more. But even if Mr. Roosevelt were to promise not to make Wood lieutenant-general and titular head of the army, it would not follow that the doctor-general will never reach that rank. If confirmed as major-general now, he will be the senior officer in that grade on the retirement of Gen. MacArthur on March 6, 1909. Even if reëlected next fall, Mr. Roosevelt will not be in office at that time. But whoever becomes President on that date will find himself confronted with the same argument which Mr. Roosevelt is now using so vigorously—that Wood is the senior of his grade and that to jump any one over him into the lieutenant-generalcy would be to slight him. Moreover, it will be said then as now, that the blame, if any, is Mr. McKinley's for making Dr. Wood a brigadier-general in 1901, and that, once having been made a brigadier-general, he ought to go up by seniority. The humiliation of having a military surgeon made the highest officer in the United States army for many years is one which Congress ought to prevent in the interest of the nation and army, and now is the time to do it—not in 1909. Then it will be alleged that there is so little difference in the duties of major and lieutenant-general as to make the additional promotion of no consequence.

According to a well-known story, a rascal who stole a pig was commanded to give five stivers to the poor. He directly said he would give ten, because he wanted to steal another. This tale should be instructive to those executives who are so freely exercising the pardoning power. The Governor of Michigan has just pardoned a Detroit bank-wrecker who had served less than a year and a half of a fifteen-year sentence; and the President granted last week eleven pardons, one of them to a former bank president. The immediate effect of these pardons is to strengthen the impression that a rich man, of good family, who plunders a bank will be treated far more leniently than the poor man whose methods are cruder and less successful. Another effect, equally unfortunate, is the development of an idea that the pardoning power is a sort of royal prerogative, to be graciously exercised by wholesale at various high festivals. Rightfully, however, a pardon is granted only on those rare occasions when later-discovered evidence, or a fact which calls for a revision of judgment, shows that the sentence has been really unjust. The Detroit pardon is obviously a case where the tears of friends and an appeal to sentiment pure and simple have been determining causes. For the President, the duty of the moment is to get rascals into prison rather than out. The country is crying out for justice upon the land thieves and the postal thieves.

Perry S. Heath continues as buoyant and impudent as ever. In his latest outgiving he asserts that President McKinley had hoped to see Hanna next in succession. Heath knows this, because McKinley, recognizing in Heath those sterling qualities of heart and mind which make his name to-day a household word, chose Heath as confidant. Posing also as the repository of Senator Hanna's secrets, he tells us that the Senator's business is now so arranged that he "can serve in any capacity in the Government." Moreover, "Hanna does not want the office [of President]. That does not mean that he does not want the nomination. I say he does not want the office." If Mr. Heath correctly states the Senator's position, the Hanna boom need not be a cause of anxiety to any one. Mr. Hanna is not likely to get the nomination; but should he by chance secure it, the voters will never thrust him into an

office which he does not want. Indeed, if Perry Heath, as Secretary of the Republican National Committee, continues until next June "airing his vocabulary," the voters may conceivably defeat any Republican candidate. Dr. Johnson once said, "A cow is a very good animal in a field, but we turn her out of a garden." We may add that Mr. Heath might be a good man in a penitentiary, but he should be turned out of a political committee.

Probably the best indication of the real condition of the Hanna boom is furnished by the action of his lieutenants in Ohio. They have decided to hold their State convention at the very latest date possible. In other words, they are going to wait as long as may be to see what will turn up. They adopt this expectant attitude because they think that Mr. Hanna is certain to be the beneficiary of all the discontent with President Roosevelt. This may increase by the end of next May in such proportions as to compel the Ohio Senator to come to the rescue of his imperilled party. On the other hand, if the opposition to the President's renomination proves futile, the Ohio Republicans will be ready to come out heroically as fortune's champion, ever strong upon the stronger side, and bring up the rear of the conventions with wild enthusiasm for Roosevelt. In so far, we take it, the Hanna movement against the President is serious. It will be pushed if those behind it think it can be made successful without at the same time wrecking the party. The big subscriptions are ready; the politicians have been sounded; and now there is nothing to do but wait. If Mr. Roosevelt should make some blunder still further alienating supporters, he would be thrown over. We presume that he understands the situation. The ostentatious reconciliation between him and Senator Hanna deceives nobody. It recalls what Lady Russell said when her husband, Lord John, had made peace with his rival, Lord Palmerston: "They have shaken hands and embraced, and hate each other worse than ever."

The *Times*, in a State by State canvass of Democratic preferences, brings out these interesting facts: first, that there is great division of councils; second, that Judge Parker has a handsome plurality on the theory that he can carry New York. Naturally, a vote which is merely the opinion of State correspondents as to the political drift in their communities need not be regarded with great seriousness. One takes with a grain of salt, for example, the little roster of States which have made an adoptive favorite son of W. R. Hearst. But it is instructive to note that the Democracy at large seems to be taking Mr. Cleveland absolutely at his word and to be little inclined to force him to reconsider his letter to Mr. McKelway. It should be said also that the advocacy of Judge Parker lacks enthusiasm except among those—a small minority of the party—who are eager for "any safe candidate." In short, the *Times's* interesting *enquête* merely shows a general indecision in Democratic councils which calls for new and vigorous leadership. It is quite possible that the "man to beat Roosevelt" is as yet unnamed and unrecognized.

The Cuban Congress must be made to understand that circumstances alter cases. It is persistently rumored that it plans to increase the customs duties in order to overcome the revenue effect of the new reciprocity treaty. Such an evidence of bad faith would be shocking; well might this country invite the world to behold how sharper than a serpent's tooth it is to have a thankless child. An increase in tariff taxes is all right under some circumstances, but strong meat must not be given to babes. Let the new republic follow our example. It took us a long time to reach our present tariff schedules. Our physique is now inured to violent changes of this sort, but we can only view with alarm a similar policy on the part of Cuba. The new republic, having food and raiment, should be therewith content. Ingratitude is certainly a marble-hearted fiend, yet Cuba is within her rights if she raises her duties. The reciprocity treaty insures us an advantage over other nations; and so long as our relative position is not disturbed we have only sentimental ground for complaint. If reciprocity is going to reduce Cuban revenues, it is natural for the republic to ask how it can make good the loss. The average duty in the present tariff is less than 25 per cent., which should make good Americans smile. Why, this ridiculously low figure is of itself sufficient ground for increasing the duties without an instant's delay.

The real difference between a Tammany and a civilized government is well illustrated by Mr. McClellan's appointment of George E. Best as Bridge Commissioner. Mr. Lindenthal, Mr. Low's appointee, had had thirty-one years of practical experience, both as a railroad and a bridge engineer. He had, moreover, studied at the Vienna Polytechnic, and was a member of the London Institute of Civil Engineers, the similar Canadian society, and of the American Society of Civil Engineers, as well as many others of a similar professional character. Mr. Best is a subservient tool of "Boss" Murphy, and a Tammany heeler who has hitherto obtained only such small jobs from Tammany that no one in the organization even dreamed of his getting so important an office. It is needless to say that he has had no technical training whatever, and is therefore manifestly unfit for the very important position for which he has been chosen. Finally, Mr. Best is universally regarded as a creature of the street-railway companies—he at present holds a small position with a private contracting company. Since there are questions of vital importance to the traffic development of the city pressing for settlement, the Manhattan companies wish to be in a strong position in their dealings with the Brooklyn Rapid Transit Company in regard to bridge railway service. And, then, for what did the companies contribute to the Tammany campaign fund? Apparently, Mr. McClellan has purchased the McAdoo appointment by a surrender of other nominations to Mr. Murphy.

In Mr. McAdoo the Mayor-elect has selected a police commissioner much above the ordinary Tammany type. If he was only an average assistant secretary of the navy, he has, since his removal to this city, had a large law practice and been the head of some important undertakings. He refused to follow Bryan in the latter's disastrous campaigns, and remained with the Gold Democrats at a time when to do so seemed to threaten political extinction. In so far as his record goes, this appointment is, for Tammany, a very good one. It is only necessary to recall some of the former Wigwam commissioners, such as Sexton, Martin, Murphy, and "Barney" York, to prove that Mr. McClellan has aimed higher. The rumors that Timothy Sullivan and his gang are very much displeased with the appointment are also creditable to both Mr. McClellan and Mr. McAdoo. But the real test of the latter will come after he has taken office. Today he uses very fair words, promising that his department shall be "honestly and cleanly administered" "for the best government of this great community."

The attempt of previous witnesses in the investigation now going on to throw a large part of the blame for the Shipbuilding outcome on Mr. Schwab, is vigorously contested by him. He has just filed a cross bill denying in general and in particular all the allegations of fraud and conspiracy made by the complainants in the suit for the Shipbuilding Company's receivership. He read the prospectus and believed in it with childlike faith. Who ever heard of a prospectus that was not absolutely truthful? But if everybody concerned in the Shipbuilding deal was actuated by the highest motives and pursued the most business-like methods, how does it happen that the completed whole strikes every one as neither reputable nor business-like? Obviously, somebody has blundered—if not morally, then mental-

ly. Possibly the Shipbuilding collapse represents nothing more than a mere mathematical inadvertence—a failure to perceive that six ciphers will not make one unit.

A strong sense of humor has always been considered an American trait. Mr. Daniel J. Sully, however, does not think so, or else he is entirely without it himself. This bull cotton manipulator has started a "campaign of education." He wants the spinners of the United States to subscribe $250,000 to make the American press and people see the reasonableness of permanently high-priced cotton. It is not hard to see why Mr. Sully should want this view to be widely accepted; and that he should go systematically to work to inculcate it is not surprising. But when a person undertakes to educate the public by "write-ups" and "coöperative advertising" and "authoritative personal interviews," he usually tries to conceal his hand. None of us supposes that Mr. Sully is bulling cotton for "his health." His position is that of the celebrated divine who, when he was asked what he went around the country lecturing for, replied, "f. a. m. e.—fifty and my expenses." In a word, Mr. Sully is a little too eager to educate the American people; this scheme to "salt down" his alleged $10,000,000 profits in cotton is just the thing to excite their humor. He should broaden his scope. For not only must he show the people of this country the advantages of buying cotton cloths for which they have no money to pay, but he must also perform the same service for the Chinese and other foreigners. Then, too, he must teach the mill owners that there is a profit in piling up goods for which there is no sale. But, above all, it is necessary to make foreign nations see that it would be very foolish to enlarge the culture of cotton. Certainly, no educator ever undertook a more delicate task.

The "unionized funeral" threatens to be the funeral of unionism. If the walking delegates have the courage of their logic, there is no reason why they should not proceed from a union driver to a union-made hearse and coffin, union-grown flowers, and a union-dug grave; and finally they will insist on substituting for the extreme unction of the Church the sacred union label. Having thus laid hold, so to speak, on eternity, the unions should find it easy to seize all temporalities and unionize every act of life, from the first cry that opens the lungs to the dying gasp. The only difficulty with the present programme is that it is almost too complete. In its prescription of a formula for all activity, it gives us a foretaste of the iron regimen of socialism; and for this last step we Americans seem unprepared. We still cling fondly to the old notion of doing a few things for ourselves in our own way. Union pies may be better for body and soul, but we perversely long for those "like mother used to make." The procession headed by the union banner is a magnificent spectacle, but many of us had rather go our own easy gait than join the inexorable lockstep. Some of the enthusiastic marchers, too, seem to weary of the pace, and feel that they are dragging the ball and chain. Frederick W. Job of Chicago, secretary of the Employers' Association, declares that membership in the labor unions in Chicago has fallen off 30 per cent.; and even those who may dispute the exactness of his figures and charge him with prejudice, must admit that the slackening of trade is decimating the unions. The walking delegates who have been setting up their little kingdoms, are learning the truth of Mirabeau's dictum, that a *fureur de gouverner* is the worst malady of states.

One glaring defect of our international copyright law is the provision compelling "simultaneous publication" even for books in foreign languages, or for translations of them into English. The hardship which this works in the case of Continental authors is obvious. They are forced to decide in advance whether their writings may count upon such a sale in this country as to warrant separate printing and publishing here; while if they do not authorize and copyright a translation immediately, they are exposed to pirating. To remedy these undoubted evils an amendment of the law has been urged upon Congress. It is in these terms:

"Whenever the author or proprietor of a book in a foreign language, which shall be published in a foreign country before the day of publication in this country, or his executors, administrators or assigns, shall, within twelve months after the first publication of such book in a foreign country, obtain a copyright for a translation of such book in the English language, which shall be the first copyright in this country for a translation of such book, he and they shall have, during the term of such copyright, the sole liberty of printing, reprinting, publishing, vending, translating and dramatizing the said book, and, in the case of a dramatic composition, of publicly performing the same, or of causing it to be performed or represented by others."

The urgent need of enacting such an amendment is argued with much force by Mr. George H. Putnam in the *Critic*. It is in the interest not only of fair play, but of the privileges of our own authors, since the annoyance caused German writers, for example, has been such that their Government has seriously thought of abrogating their literary convention with the United States. The simple change required in the law ought to be had without fail. The bill has been favorably reported by the Senate committee. It should have the active support of all to whom fair dealing in international literary matters is a real concern.

The dismissal of four more German army officers because of the revelations in Lieut. Bilse's book, 'In a Little Garrison,' shows again that the author is not being punished because his book gave an inaccurate picture of army life. But the Minister of War is evidently trying to live up to his promise that there shall be no more such garrisons in the service. In all probability there are but few, yet the code of morals under which they flourish extends throughout the army, and is responsible for a vast deal of misconduct. If it is impossible to keep Anglo-Saxons in barracks and have them saints, it is all the more difficult to keep young Teutons in order when they think themselves, because of their uniforms, of a higher order of society than any civilians, and not bound by the moral laws which apply to ordinary mortals. What the German army is suffering from is merely what must happen to any troops when their officers are made demigods and overlords, when they may kill at leisure any one who displeases, and go practically unpunished. What is needed is to make the army feel that it is the servant of the German people, and not that the nation exists for its benefit. The remedies are obvious. They could be put into operation at once by the Emperor, but that commander-in-chief's influence has thus far merely strengthened the caste feeling and the abominable military code which are a direct inheritance from the Middle Ages.

The Dreyfus affair is, fortunately, to be continued on a strictly judicial basis. For a time the admission of an appeal was the cause of bitter criticism. It was feared that the order for revision quashed all the proceedings of the Rennes tribunal, and left Dreyfus eligible for immediate restoration to his rank as captain. Such an act would have aroused the ugliest passions among the Nationalists. As the matter now stands, the case will be reviewed by the criminal branch of the Court of Appeals, probably a new court-martial will follow, and Dreyfus will stand or fall by the result of the new verdict. Sensational revelations of perjury and forgery at Rennes are to be expected, for the Commission would never have reopened the case because of merely technical irregularities in the previous finding. Meanwhile, the old verdict stands. All those who have followed the affair will agree with the very French comment of the critic Anatole France, who welcomes the new trial because he feels that so famous a case should end with something of tragic dignity and completeness. The Rennes court-martial and the subsequent pardon afforded a dénouement, he avers, of bourgeois ineptitude. It may be said, therefore, that it is a case in which æsthetics and substantial justice are in singular accord.

AN HONORABLE WAY OUT.

As the Panama case stands to-day, nobody is satisfied. The canal itself is indefinitely halted. If a new face is not soon put upon the project, the Administration will have to confront endless delays as well as a long and bitterly partisan struggle, with alienated supporters. Colombia, of course, is vastly discontented with the situation. Her latest proposals show that she is more than ready to accept any reasonable and honorable compromise. She wants the canal. So do the people of Panama. So do we. Yet the whole thing seems deadlocked. Is there no way out, at once agreeable to all concerned, and in harmony with law and good morals? We believe there is.

A promising point of departure may be found in the pending treaty with Panama. The second clause of Article xxiv. reads:

> "If the Republic of Panama shall hereafter enter as a constituent into any other Government, or into any union or confederation of States, so as to merge her sovereignty or independence in such Government, the rights of the United States uner this convention shall not be in any respect lessened or impaired."

On that pivot, we think, a fresh negotiation could be made to turn. The canal could be secured and even hastened. Colombia's honor could be salved. The good name of the United States could be left beyond reproach.

What would be necessary? Simply that the people of Panama, with their full consent, should be merged again in the sovereignty of Colombia; and that the latter, of her own motion, should validate all the acts of Panama during her brief existence as an independent republic, including the ratification of the canal treaty. Then the net result would be a treaty before the United States Senate to which there would be no legal or moral objection, and of which the speedy acceptance would start the dredges on the Isthmus more quickly than persistence along present lines possibly could. That is what all parties profess to want. Yet from it they are all debarred, as matters are. Why should there not be a reconsideration and readjustment? Sound and enlightened statesmanship could surely find a way.

There are some signs that a new move is possible or even contemplated. Gen. Reyes would not have stayed in Washington so long, we imagine, nor have striven so successfully to induce the Colombians to be patient and keep quiet, if he were merely preparing a formal protest or planning to put in a pitiful bill for damages. Larger aims must have been in his mind; and what they are the *Evening Post's* Washington correspondent has hinted in his report of the new Colombian proposals. These are, in effect, not only to let bygones be bygones, but to make new and highly advantageous offers which would result in our getting the canal more speedily and more honorably than by the side wind of a dubious Panama republic. All that Colombia asks is a restoration of her territorial integrity. That this could be accomplished with the consent of the people of Panama, provided that they saw their greatly desired canal furthered thereby, there can be little doubt. They are a mixture of races; they have already confessed that they are afraid of their own army; they betray no symptom of real nationality. By themselves, they would give endless trouble, and would soon clamor for annexation. Every sensible American would prefer to see Colombia take them again.

President Roosevelt has more than once shown that he is not above acting on a second thought. He cannot be satisfied with the present posture of the affair. We do not mean politically—the effect of the whole thing on his renomination and election we put one side; but no man of his breeding and temper can be happy in the knowledge that an ill-considered step of his has affronted the best sentiment of his party. A college man himself, it cannot be a matter of indifference to him that academic judgment is so strongly against his Panama policy. He turned his back on Addicks when he found what a shock his dallying with that corruptionist had given to his warmest admirers; and why should he not seek now to demonstrate that he knows how to respond to a moral appeal? Besides, his favorite doctrine of efficiency and promptitude could be best exemplified in such a rearrangement as has been suggested.

We heartily desire an Isthmian canal. We favored the Panama route at a time when nearly the whole press was caught in the snare of Nicaragua. It was, accordingly, a great disappointment to us that improper and illegal methods employed to expedite the canal compelled us to oppose the Administration's plan. If the President, however, will now adopt measures to do away with the legal and moral difficulties which we have felt so deeply, it is needless to say that we should hail so auspicious an event.

MR. SCHURZ ON THE NEGRO PROBLEM.

McClure's Magazine for January contains a paper of great historical value, and also of deep present-day significance, from the pen of Carl Schurz. It begins by recalling and explaining the report on conditions in the Southern States which Mr. Schurz submitted to President Johnson in 1865. This had particular reference to the outlook for the freedmen. Pursuing wide inquiries with the utmost impartiality and patience and open-mindedness, Mr. Schurz was compelled to come to the conclusion that there was grave danger of practical re-enslavement of the negroes. His able report on the subject had much to do at the time with shaping Northern sentiment and, later, leading to legislation by Congress. We have at hand, and are permitted to print, an unpublished letter written by the late John M. Forbes of Boston, which is strong contemporary testimony on this point:

> "Boston, Feb. 12, 1866.
> "E. L. Godkin, Esq.
> "My Dear Sir:
> "The *Nation* has again begun to reach me, as did a note from you some days since about the Jamaica warning.
> "Thanks to the President's policy, which has encouraged the enemy to show the cloven foot, we need no old precedent to train us. The South are already bettering the example set them by the planters; and they are doubtless ready any day to repeat the atrocities of the latest Jamaica fashions!
> "Owing to my pre-occupation, and to missing some numbers, I do not know how far you have used Carl Schurz's report. If not already done, would not a review of it with liberal extracts be useful, in keeping before the public mind the dangers of re-enslavement under the various forms which the slave drivers are so very ingenious in inventing? If they can contrive any way by which each poor white can own, or control for insufficient wages, the labor of one or two negroes, I really don't see but the original paradise of the Southerners may be realized without reopening the African slave trade; and if so, the condition of the negro will be ten times worse than if owned in a more patriarchal fashion by richer masters, who had less temptation to grind him than the poor whites would have.
> "Very truly yours,
> "J. M. Forbes."

When on his tour of inspection in 1865, Mr. Schurz encountered again and again that mixture of condescension and impatience with which we are so familiar at the hands of Southerners. He was a Northerner; therefore he could not possibly understand. They smiled at him in a pitying way when he maintained that free negroes would work. "The negro can never be got to work except under physical compulsion." That was the fundamental truth which Southerners laid down at the close of the war. They knew. They had lived with the negro for generations. Northerners might think they knew negro nature, but they were falling into a huge mistake. It was of no use to protest against the new statutes and cunning devices which aimed at making the negro a slave again, for the South had a vast amount of work to be done, and "physical compulsion" was the only way to make the negroes do it. How forty years of great crops with free labor have given the lie to that confident assumption! The result ought to diminish a little that patronizing certainty of knowing it all with which Southerners to-day forbid us of the North to discuss matters of which we must be, in the nature of the case, wholly ignorant.

One thing which Mr. Schurz's report, and his comments on it, make perfectly clear is that Congress felt itself absolutely compelled to grant the suffrage to the negro. This was no rash measure of vengeance; nothing in the nature of a penalty. It was a necessity—disagree-

able, but a necessity. In no other way could a weapon of self-defence be placed in the hands of the ex-slaves. Freed by the nation, they were in peril of being made serfs again by the several States. Hence the duty, plain and urgent, as it seemed at the time, of pressing on and giving the freedman the freeman's buckler against oppression—the right to vote. In bringing out as he does the facts and motives operative at the time, Mr. Schurz goes far towards disposing of current misconceptions and unfounded charges.

His analysis of existing conditions and tendencies in the South is one to which the South itself and the entire nation should give heed. Mr. Schurz clearly perceives a dangerous drift. Pro-slavery ideas are again asserting themselves. The movement to extinguish the negro's political rights is unconcealed. By craftily devised and inequitable laws the suffrage is taken from him. With all this go naturally the desire and purpose to keep him forever "alongside the mule." Negro education is looked upon with increasing hostility. Every door of hope opening into the professions is slammed in the face of black men merely because they are black. The South works itself up into hysterics over the President's spontaneous recognition of manhood under a black skin. While philanthropists and teachers are laboring to raise the negro to the full level of citizenship, an open and determined effort is making at the South to thrust him back into serfdom. As Mr. Schurz says, the issue is upon the country, for one tendency or the other must prevail.

It is his view of the great urgency of the juncture which leads him to address a moving appeal to the South's best. He implores its leading men to bestir themselves to prevent the lamentable injustice which is threatened and partly executed. By withstanding the mob, by upholding the law; by ridding themselves of the silly dread of "social equality"; by contending for negro education of the broadest sort; by hailing every step upward which the black men may take; by insisting upon the equality of all men before the law, they can, Mr. Schurz argues forcibly, do much to save the South and the country from the disgrace and calamity of a new slavery. To this plea every humane patriot will add his voice. We, for our part, have never failed to second such appeals to the better South, and shall note every response with delight. But, indirectly, Mr. Schurz's paper is also a challenge to the mind and conscience of the North. Unless they, too, respond, the cause of the negro—which to-day is the cause of simple justice—will languish and die.

JAPAN AND RUSSIA.

The present extreme tension in the Far East is directly traceable to the brilliant Japanese successes of 1894-5. When the fleet of China had been destroyed and her troops swept irresistibly out of the Mantchurian seaboard, the real impotence of the Celestial Empire was demonstrated. Formerly a superstition and a mystery had measurably protected China. Now it appeared as easy to win an empire in the north as it had been for France to take Tonkin by default in the south. But the Japanese, having made this useful demonstration, were not allowed to profit by it. Formosa was the only actual conquest left to them by the Concert of Europe, though the recognition of the independence of Korea left the Japanese free to establish there a sphere of influence if they could.

Japan was not only checked, but humiliated. She saw the period of leaseholds begin. Russia established herself in Port Arthur, to capture which Japan had spent blood and treasure; England claimed the "second-rate watering place," Wei-hai-wei; across the gulf in Shantung, German trading stations became virtually colonies. Japan had shown the way to the partition of China, but had not been allowed to benefit by her dear-bought discovery. She still suffers under that war debt and under the expense of administering Formosa. All this constitutes a real grievance, which is felt from the throne to the people, and makes the entire nation most sensitive to the suspicion of new aggression. And such aggression has not been lacking. At several points the Russians have set up trading posts beyond the Yalu; secret overtures have been made to win the court at Seul, while, latterly, Russia has asserted an equal influence with Japan in Korea. On that issue the Japanese seem bound to fight, and they would the more hopefully enter upon a war for their preponderance in Korea since the relief expedition of July, 1900, left the comparison between the Japanese and Russian contingents decidedly in favor of the Japanese. The hope of a peaceful solution, then, lies chiefly in some whittling down of the Russian demands. Japan might be willing to give Russia full recognition in Mantchuria. That territory is Russian beyond dispute; but she will oppose Russian pretensions in Korea to the last cartridge and the last ditch.

The certainty that Great Britain has made representations favorable to Japan at St. Petersburg, and the well-grounded belief that the Kaiser has promised the Czar neutrality of the most benevolent kind, show that a war in the Far East might have very serious European complications. But this is, of course, a reason for the war not coming off. It ought to be, and perhaps it will be, as possible for the Powers of Europe to keep Russia out of Korea as it was in 1895 to force Japan back from Mantchuria. Something, then, is to be hoped from the friendly offices of the European Powers and more, perhaps, from the fact that Russia would now fight at a relative disadvantage. Time is making her hold on Mantchuria secure. Colonization is reinforcing military occupation. Troops are being crowded into the Chinese leaseholds. In fine, Russia will for many years improve her military position in the Far East, whereas the fighting force of Japan is probably very near its maximum to-day. So if it were merely a matter of meeting Russia, Japan would be forced to fight now or to surrender abjectly all her continental ambitions whenever the sacrifice should be exacted.

If the Japanese choose to postpone the crisis it will be in view of remote eventualities, such as the internal disintegration of the Russian Empire, or some possible rehabilitation of China. These are rather vaticinations, perhaps, than serious motives for diplomacy; but it is obvious that if Japan could maintain a foothold in Korea, she might become the residuary legatee of all Mongolian possessions of a crumbling Russia, while the development of military strength in China might force Russia to be content with things as they are. Here is a very interesting subject of speculation. It may not be generally known that ever since the Chinese war a Japanese propaganda has been conducted in Northern China—in part military, in part commercial. There is to-day a nucleus of about three brigades of Chinese soldiers trained by Japanese officers, which would be by no means a negligible quantity in case of war, for it is a real army, not a mandarin's escort or a Boxer horde. The military potentiality of China is, indeed, far greater than that of Russia in the Far East, and Japan may have better means of hastening the actuality than are generally realized.

But we regard it as unlikely that these incommensurable considerations will weigh heavily in the present balance. The alternative is plain: Russia must choose between fighting now, or withdrawing, for the moment, at least, all claims to Korea. Japan seems anxious to avoid war, understanding perfectly that Russia is virtually invulnerable; but if she accepts terms of any kind to-day it must be understood as meaning that she has satisfactory assurance of future support from China and probably from Great Britain. The conflict itself seems inevitable. The Russian advance is an instinctive racial movement which no Emperor and no bureaucracy can arrest. It may be the great misfortune of Japan to oppose this advance single-handed. But it is also an opportunity for heroism. Nobody knows better than the enlightened statesmen at Tokio that to defend Korea against Russia is to provide, at best, a Marathon in the interest of all the rivals of the Slav.

Most people have not sufficiently considered what war between Russia and

Japan would mean. It would speedily become a matter of the gravest economic importance. The contingencies would be such that almost every civilized nation would realize that it had much at stake. Upon international finance, for example, the effect would be watched with anxiety by the industrial interests of two hemispheres. The smallest manufacturing town in the United States might be greatly affected by changing monetary conditions. The possible dislocation of markets for commodities would be another serious question. Would the rise in the price of wheat offset the decline in cotton? While the hostilities lasted, would the exports of our cotton mill products, like those of Lancashire, continue to decrease? And there might be cause for concern regarding our large oil exports to the East. Then there is the question of our new treaty with China, whose enforcement might be made much more difficult by war. But above and beyond all questions affecting the immediate future is that of the permanent destiny of China. Certainly, a partition of the Empire would be likely to have lasting economic consequences. The trade policy of the entire world might have to undergo radical transformation. On the other hand, if China should emerge from the war with a determination to modernize herself, the effect would be equally striking.

SOME COLLEGE SALARIES.

College salaries are discussed by a writer in the December issue of the *Harvard Graduates' Magazine*. He reviews the treasurer's statement of 1856-57, when the president received $2,500. Some of the professors, among them Benjamin Peirce, C. C. Felton, Joseph Lovering, Francis James Child, H. W. Torrey, Francis Bowen, and G. M. Lane, had $2,200; James Russell Lowell, Smith professor of the French and Spanish languages and literatures, and professor of *belles-lettres*, $1,200; and Charles William Eliot, tutor in mathematics, $645. Passing from the past to the present, the writer roundly asserts that salaries to-day are relatively smaller; for "the best paid professors receive only $5,000 a year at the culmination of their career, while some of them have $3,500, and the majority range from $4,000 to $4,500. Now, the maximum, $5,000, is not equivalent in purchasing power to the $2,200 which the leading professors of 1856 found all too little."

The question is then raised whether, in a time of rapid increase of wealth, it is not ominous that the professor should "be singled out to receive no proportionate share in the general gain"; whether the fact that he is "presumably doing what he prefers" should entail on him such a pecuniary sacrifice; whether in an age which gives its chief prizes to professional experts, it is not paradoxical that college professors—"who are themselves experts, and who train the lawyers, doctors, engineers, electricians, and other leaders in practical affairs"—should be held as of less relative value to the community than a generation ago; and whether, in short, "compulsory plain living" may not in time "produce a race of professors incapable of high thinking." The writer in the *Harvard Graduates' Magazine* answers his questions in asking them. He does not hope for a realization of Professor Münsterberg's "Oriental dream of Harvard professors receiving a salary of $25,000," but he thinks a considerable increase in pay necessary unless the first-rate men in professors' chairs are to be replaced by "second-rate men of routine, who are sometimes cheap at any price."

The cry which goes up from Harvard will be echoed from every college in the United States. Our professors are as a class underpaid. In some of the institutions of the South and West the maximum of $1,200 to $1,500 is so ridiculously small that often second or third-rate men will not accept it. The only salvation of these colleges is to secure bright young men and trust to their local attachment and their inertia to hold them. In New England, however, the conditions are not yet actually painful. Yale pays as high as $3,750, Brown $3,000, and Dartmouth, Williams, and Amherst, situated in country towns, range somewhat lower. As Brown is in a city of 175,000, where rents are fairly high, the pay there is perhaps relatively less than in the three country colleges. But in all these places reasonably frugal families manage to lead a tolerable existence. It is true that successful doctors, lawyers, and engineers in Boston, Providence, and New Haven are earning more than twice as much as the professors; but it is not true, therefore, that professors' salaries should, as some maintain, be forthwith doubled. An addition of $1,000 to $1,500 in every college from Harvard down would provide a suitable livelihood, and would probably attract the ablest men. For the best college professor is he who is willing to renounce money prizes for the larger returns of his calling if only he have enough to live in decency and comfort.

He has compensations which the income of a railway president cannot buy. He is removed from the ordinary risks of business and the worry that attends them; he has the long vacation, during which he can follow his writing or his researches, unvexed by the daily routine of classes; or he can often quicken his mind by travel. These obvious and immediate advantages are the reward of no other profession, unless it be that of independent author or scientist, whose pay surely does not average much higher than that of the college teacher. Besides, if he be in love with his work, he gets out of it a pleasure that makes anything above living expenses a secondary consideration.

There are two other rewards that are moral rather than intellectual. In our leading colleges the teachers are not the slaves of sect or party. They can think what they please, and, within the bounds of sanity, say what they think. If they have outgrown their early creeds in politics or religion, they are not forced to juggle with language or conscience; to declare that the obvious meaning of their utterances is not the real meaning; or to persuade themselves that they believe what they know in their hearts is a lie. These privileges, even to men whose moral senses are not keen, are worth much money. And, as we all live for the next generation, professors can rear their children in the choicest society in America, where there is a wholesome atmosphere of simplicity of life, reverence for the lessons of the past, and intellectual honesty. This is no mean bequest to posterity. There may be some risk of isolation and dry scholasticism, but there is less danger of surrender in *la guerre immortelle contre le pédant et le provincial* than in the outside struggle against those who declare—like the Irish priest—that they are well enough without learning; that without it the fish are caught and the potatoes grow, and men can do all that man wants—eat, drink, and sleep. If men have the true mettle, they will fight the better on a moderate salary, free from heavy social duties, despising luxury.

PEACE TAUGHT BY HISTORY.

Here is a new method for teaching the principles of arbitration. A young French professor has just discovered it. Instead of writing articles or delivering speeches on the absurdities and the horrors of war, expatiating on commonplaces which meet with little or no contradiction among sane adults, he has written a text-book of general history for children, 'Histoire de la France et de l'Europe,' with the sub-title, 'The Teaching of Peace through History.' This professor is not unknown to those who have followed recent events in France. His name is Gustave Hervé. He hails from Brittany, intellectually the most backward province of France. Two years ago he was teaching history in the lycée at Sens, near Paris. He was a successful teacher, beloved by his pupils and favorably looked upon by his chiefs. Suddenly his name became associated in the public prints with the most unpopular political doctrine—internationalism. M. Hervé has a strong dislike for all the follies of a boisterous and braggart patriotism. He hates war and despises militarism. One day, apropos of the celebration by a local regiment of the anniversary of the battle of Wagram, he wrote in a little Socialist paper of Sens an article that aroused violent indignation throughout France. In order to strike the imagination of the peasants of

Champagne, he recited some of the horrors of that most barbarous and useless slaughter at Wagram, as related in the memoirs of Marbot, and concluded by saying that "a fitting commemoration for such a deed could be celebrated only by planting the flag of the regiment in a heap of manure in front of the barracks."

This expression, M. Hervé willingly admitted, was not in the best of taste. It was carefully picked out of the article, published in all the papers, and its author branded as a criminal. Two courts in succession tried M. Hervé: the Court of Assizes of Yonne acquitted him, but the Superior Council of Public Instruction, by a vote of 38 to 13, dismissed him temporarily from the service of the University of France. M. Hervé used his enforced leisure to continue his propaganda. The other day he was prosecuted again for attacking the army, and again acquitted. And now here is his text-book. It is not written in the style of the article on the battle of Wagram. There is throughout the book, in spite of the strong anti-Catholic, anti-militarist, and even Socialistic spirit, a serious attempt at impartiality. The main object of the author has been, through his presentation of facts, to teach children not merely to detest all wars of conquest, whoever may wage them, but to understand the real solidarity that binds together men of all races and all nationalities. Moreover, he has given preference to facts that are most interesting to a twentieth-century reader above the useless chronicle of obscure and tedious events. The contemporary period claims almost half the book, while only 80 pages out of nearly 500 are given to the Middle Ages.

All the wars of the sixteenth and seventeenth centuries, of Francis I., Henry IV., Louis XIII., and Louis XIV., are summed up in ten pages. M. Hervé's estimate of these kings is rather severe: "Except Henry IV., who was an intelligent and well-meaning sovereign, they were very ordinary men either intellectually or morally; morally, some of them were much below the average." Their wars, which have been studied in minute detail by generations of schoolboys, are ascribed merely to a desire for aggrandizement and for military glory, a legacy of barbarous ages when "brute force was universally admired." The author dwells on the most cruel and odious sides of these wars, pointing out their disastrous effects on the people, who had to pay the expense whether victorious or defeated, and who suffered meanwhile by the devastation of their fields. But they had still worse results. After enumerating all the evils that followed Louis XIV.'s passion for conquest, including several invasions of the country by foreign armies, he concludes: "Our account of these wars would be incomplete if we did not recall that they kept up in our country and in neighboring countries a hatred of foreigners, the worship of brute force and military glory, and thus caused many other wars even after the passing away of the old régime."

The Napoleonic wars were a good field for an historian desiring to teach the necessity of peace. M. Hervé has made the best of his opportunity. A short chapter of thirteen pages covers the whole ground. Never in any text-book did the Napoleonic legend receive a harder blow. A reproduction of Verestchagin's famous painting—a heap of skulls over which fly vultures, with the inscription "Vive l'Empereur!"—opens the chapter. When it comes to the recital of these wars, no time is wasted in admiring the tactics of the generals or the bravery of the soldiers. The author dwells mainly on the many scenes of savagery which dishonored those campaigns. At Genoa, in 1800, Austrian prisoners were left without food and had to eat the leather of their shoes and belts. During the war of 1805 in Austria some of the wounded soldiers sought refuge in a little town that caught fire. Marbot tells us that thousands of the poor fellows were left imprisoned in the burning buildings; they had to crawl out of the houses, and could be seen lying half-burnt in the streets, some of them still breathing. Such scenes detract somewhat from the romance of war, and M. Hervé does not fail to make use of them. At the same time the resistance to the rule of Napoleon on the part of the nations of Europe, the patriotic upheavals, receive from M. Hervé the same praise as the patriotism of the French volunteers of 1792.

Last year M. Urbain Gohier, another pamphleteer of the anti-militarist school, travelling through the United States, was surprised at the many signs of what appeared to be Napoleon's popularity in this country; and in his interesting book, 'Le Peuple du XXme Siècle,' he expresses his amazement that so many Americans should worship a man who, besides "being the greatest bandit in history," "had not even the merit of being an athlete." M. Hervé would doubtless attribute this to a bad choice of text-books in American schools. He has taken pains not to leave any doubt as to the opinion the reader ought to have of the "Corsican adventurer." While relating without hesitation the reasons why so many Frenchmen still admire Napoleon, both as the soldier of the Revolution and the great general who added glory to the French name, he sums up in a few lines the reasons of those who curse "his bloody and deadly work": "Four million men killed on the battlefield; national hatreds that were to perpetuate themselves and bring about fresh hostilities; the Declaration of the Rights of man hated, and justly hated, by all humanity."

Most eloquent of all is the chapter in which the author figures up the tremendous losses to the industry and commerce of European nations caused by the régime of armed peace; England paying 50 per cent. of her whole budget, France 59 per cent., Italy 64 per cent., and Spain 70 per cent. to those unproductive expenses. To this he adds four million young men taken away from peaceful pursuits and wasting the most precious years of their lives in the idleness of the barracks, where they contract habits of drunkenness and debauchery that spoil the good qualities they bring from their shops and farms. These evils, which fall mainly upon the poor people, will in time bring about a new era, when arbitration will settle the disputes of nations as it has come to settle the disputes of individuals. M. Hervé enumerates for his young readers all the signs that point to this new order of things. The motto is no longer "Si vis pacem, para bellum," but, "If you want peace, prepare for peace." M. Hervé has found a good way to prepare for peace.

WHISTLER EXHIBITIONS IN LONDON.

LONDON, December 20, 1903.

Since that wonderful show of Whistler's pictures at Goupil's in 1892—the show that first forced the English public to accept him, not as the mere charlatan they thought him, but as the great artist he was—there has been no representative exhibition of his work in London. The International Society, of which he was the president (only yesterday M. Rodin was elected his successor), naturally always reserved for him the centre of honor and as much space as he was willing to cover; on two occasions getting together extraordinarily fine groups of his recent and earlier paintings, and once filling a room with some of his etchings which had never been exhibited before. In the various galleries, a chance picture or print now and then found a place, and the Fine Arts Society, some few years ago, made a separate exhibition of his lithographs. It possibly was too soon to repeat the experiment of 1892, and, besides, during his last years Whistler seemed unwilling to allow his more important work, as he finished it, to leave the studio, sending instead, even to the new Salon, his smaller paintings and drawings. This was why an idea got abroad that he had no longer the energy or power to attempt a large canvas, though during this period, as the few admitted into his studio knew, he painted several large full-length portraits that eventually will rank with the "Mother" in the Luxembourg, the "Carlyle," the "Rosa Corder," the "Miss Alexander." After his death it was hoped the time had come for a complete exhibition of his life's work—one that would as completely surpass the Goupil show as that had outrivalled all previous attempts. But as yet, while the Copley Society is preparing for just such an exhibition in Boston, nothing of the kind seems to have been undertaken in London. And now it begins to look as if even the opportunity had been lost, partly because already many things that might help to make one great collection have been scattered in various smaller shows, partly because many others are being secured by enterprising collectors from abroad, chiefly from America, until, presently, there will be none left in Great Britain to exhibit.

Ever since the galleries have been opening this autumn, Whistlers in greater or less numbers have been given a prominent place on their walls. A portrait—unfinished, one he probably would never himself have permitted the public to see in its present condition—now hangs in the annual exhibition of the Society of Portrait Painters, of which he was a member; the "Miss Alexander," in the midst of a series of smaller works, is on view at the Burlington Fine Arts Club. As I write, an invitation comes from the Goupil Gallery, where the pastels and prints bought by its manager the other day at the Hôtel Drouot in Paris are to be the chief feature of the new show. It is announced that several of his pictures will be included in the winter exhibition of the Royal Scottish Academy, Edinburgh, of which he was an honorary member. After the first of the year, the International Society of Sculptors, Painters, and Gravers—

his society—will open their exhibition in the New Gallery, London; and though as yet they have made no announcement—that is, so far as Whistler is concerned—they can scarcely let the occasion pass without doing something in his honor. But still, whatever they may do or may want to do, it will not be easy for them to prepare a more exhaustive representation of his etchings than has been made by the two unusually fine collections now hanging in two different galleries. At Messrs. Obach's in Bond Street, is the Cox collection from Scotland; at the Leicester Gallery, the collection of Mr. Mortimer Menpes, who, wisely for his own sake, waited to display his treasures until it could be done without fear of Whistler's criticisms or comments.

Mr. Menpes's prints have, in a way, attracted the more attention. No one knows better than Mr. Menpes how not to hide his light under a bushel. His show has been well announced and widely advertised. It was preceded by an article in one of the art magazines, in which Mr. Menpes explained how he had helped to ground the plates and buy the paper, how he had stood by the printing-press, how, in a word, he might be said "to have seen the whole thing through." Besides, once his prints were on the walls at the Leicester Gallery, there could be no question that Mr. Menpes had managed to become the possessor of a rare collection. In point of numbers alone it is notable, though in this respect it does not quite equal the Avery collection in the Lenox Library, while it is very much smaller than the collection shown at Messrs. Wunderlich's not many months ago. Nor, in the quality of the prints, can it compare with either of these. But then, it contains many "unique" impressions, and is therefore of supreme interest to the collector who values a work of art according to the difficulty he has in getting it and the price he has to pay for it, and who here finds his chance. But the point of view of the artist is another matter. He looks for beauty or perfection, where the collector prizes only rarity or expensiveness. Whistler never catered to the caprices of the collector in the fashion of some young etchers of the new generation who are making themselves so precious today that in all likelihood they will be forgotten to-morrow. He had too much respect for his own work to destroy it wantonly for the sake of giving it a fictitious value. It is true, some of his plates were defaced after an edition or a certain number of prints were pulled. But then, the number was fairly large. He did not deliberately manufacture "unique" proofs and "unique" states. When these exist, it may be taken for granted that they are "unique" solely because Whistler was not sufficiently satisfied with what he got out of the plate to keep it either at all, or else without working on it. It is in just such examples that Mr. Menpes's collection is richest. The portrait of "Whistler's Mother" and "The Model Lying Down," both dry-points, are, the catalogue says, the only impressions known to be in existence, though I am told by those who pay more attention to such details than I, that in the case of the "Mother" the statement is not true. Of course, the print is of interest, if only for the sake of comparing it with the portrait in the Luxembourg. In the dry-point, the figure is standing and the full face is shown. There is tenderness and charm in both the pose and the expression. But it must be confessed that the plate does not approach the perfection of some of the etched portraits — the "Annie Haden," Whistler himself, "Maude," or a dozen others. You can understand Whistler's not going on with it. You feel that even this proof might not be on the walls now had he been able to prevent it; and so with all the few single impressions of a lost or destroyed plate that have somehow survived.

With the "unique" state, it is another matter. When several states and trial proofs of the same plate are shown—though the great etcher would probably never have shown them himself—the student can follow the master's gradual approach to perfection, and note the method by which he obtained it. People have had a way of saying of Whistler that he knew just what he wanted in a plate, and so could get it. He did know, yes. But though he knew, though he got it in the end, it was often not without enormous trouble and endless hard work; and the trouble, the infinite pains he did take will be a revelation to all those who, fancying that an etching or a painting was dashed off by him anyhow, have had a chance to study the collection at the Leicester Gallery. There are more states than I have ever seen before of such plates as "Speke Hall," "Maude," "Under Old Battersea Bridge," "Irving as Philip of Spain"—to mention perhaps the most notable. And it is these "states" and proofs—even if a few are curiously unsuggestive of Whistler—that give Mr. Menpes's collection its importance. Many of the prints from the better-known plates, those of the Venetian set particularly, are so poor that one wonders if they were not thrown aside by Whistler himself as worthless.

At Messrs. Obach's the interest is rather in a collection of unusually fine impressions arranged in such a manner that justice can best be done to them. Though the exhibition, now on the point of closing, was not to last altogether much more than six weeks, if that long, the walls have been specially hung in the white and yellow scheme that originated with Whistler. The yellow is a trifle shrill and sharp; it needs a month or two more of London smoke and London dirt to bring it into tone. But, even so, the endeavor to obtain the decorative unity as essential in an exhibition gallery as in a picture, gives the distinction the work deserves. And here, though the collector has also had his chance, the pleasure for the artist has been greater. The impressions have been chosen evidently for their beauty rather than for their rarity. There are wonderful examples of all the more important series—the early French set, the Thames set, the Venetian, the Dutch, the Naval Review. Many plates are represented in two or three different states, and there is little, if anything, that one feels Whistler would not have approved. There are also lesser known prints: for instance, from the very small Windsor and Chelsea plates—"Where she lives and where I live"—that decorated the now famous Memorial Whistler sent to Queen Victoria in honor of her Jubilee in 1887, when he was President of the Society of British Artists. But the great pleasure in this gallery is less in seeing what has not been seen before than in seeing again, perhaps better than ever, the great beauty of Whistler's etchings, their endless variety, their endless life, their endless charm. It is impossible now to go into minute descriptions of any individual prints, but what I want particularly to point out is the probably unrivalled opportunity that has been given by these two exhibitions to learn how much he did in etching and how incomparably well he did it. The only series not represented in either gallery is the later Paris series; but whether these plates were ever printed, or rather whether they were ever finished after the first trial proofs were pulled, I cannot as yet say.

The misfortune is that because the prints were for sale, the two shows have interfered disastrously with that one great representative exhibition which ought to be held in London as the most fitting memorial of the artist. When they close, the prints will be scattered far and wide, collectors and dealers having come from all over the world to compete for them. Not even at the British Museum is there anything like such a comprehensive series; and even if there were, it would be of no use to the organizers of the desired exhibition, who, should the occasion arise, would have difficulty enough to get together a complete collection, if indeed they did not find it impossible. Prices, too, have increased enormously, reaching what must surely, for a while, be their highest limit, and so the probability of prints being brought back to Great Britain is small for many years to come. Indeed, before long they will be no easier to get than the pictures, which are rapidly leaving the country. Already the "Princesse du Pays de la Porcelaine," bought from the Scotch collector, Mr. Burrell, for five thousand pounds, has followed the "Rosa Corder" to America, and now it is stated that, an offer of eight or ten thousand proving irresistible, "The Fur Jacket," owned by the same collector, is also to be sent across the Atlantic. No sooner was the one picture at the Hôtel Drouot sale purchased by the manager of the Goupil Gallery than it was telegraphed for and secured by an American. Perhaps this is all as it should be. While France and America, and even Scotland, were securing Whistlers for their public collections, England made no effort—is even now making no effort. In the end, Whistler, feeling the insult keenly, expressed his hope that nothing of his would ever hang in an English national collection. It looks as if his hope would be realized. But though this may be as he would have had it, the pity is that artists and students should not be given the chance of seeing a perfect collection of his work before it is too late. The curious part of it has been to note how, for the last months, England has been saying what a good friend, but proving what a comic-opera enemy, she always was and still remains to Whistler.

N. N.

THE HOUSE OF VICTOR HUGO.

PARIS, September 11, 1903.

Toward the end of the year 1901, while France was preparing to celebrate the one-hundredth anniversary of Victor Hugo's birth, M. Paul Meurice wrote a letter to the Conseil Municipal of Paris, opening with

the following words: "England has the House of Shakspeare at Stratford-on-Avon, Germany has the House of Goethe at Frankfort. In the name of Hugo's grandchildren and in my own, I offer to the city of Paris the House of Victor Hugo."

M. Paul Meurice is a most devoted admirer of the great poet. As a college friend of August Vacquerie, whose brother was to marry the daughter of Hugo, he was introduced to the latter's house, and never did his sincere admiration weaken for one moment. He remained true to him through good and hard times, never missing an opportunity to render service, even at his own peril. In 1870, when Hugo came back to Paris from his twenty years' exile, it was M. Meurice's hospitality that he accepted for several months during the siege of the city. But it was after 1885, the date of Hugo's death, that the devotion of his excellent friend manifested itself in the most remarkable way, for he gave up his own literary career in order to foster among his countrymen what has been sometimes called Hugolatry. An easy task it was not; for, during the years that immediately followed, a strong reaction set in against Hugo's popularity. So extreme and harsh were the criticisms uttered, and with such persistence, often by very able judges, that for a while it looked as if the Titanic writer were to be brought down to the level of such men as Paul de Kock, or at best of the elder Dumas. M. Meurice was for fifteen years the most untiring agent of a final triumph; the newly inaugurated House of Victor Hugo is a victory for himself as well as for the idol he incensed.

The official opening of the House was a little *fête intime*. Only about five hundred people could be invited on account of the lack of room. The French Academy was represented by five delegates; a great many artists of the Théâtre-Français were there, headed by their dean, M. Mounet-Sully; the Society of Dramatic Authors, the Society of Gens de Lettres, and many other associations sent their presidents. The few survivors of the family of Victor Hugo all attended: Jeanne Hugo (to-day Madame Jean Charcot) and Georges Hugo—the two grandchildren immortalized in the poems of 'L'Art d'être Grand-père'—and Monsieur and Madame Lockroy. (Madame Lockroy was first the wife of Charles Hugo, who died in 1871; she is the mother of Jeanne and Georges. She married a second time, in Brussels, but went to Paris with her family. The Lockroys lived next door to Victor Hugo on the Avenue d'Eylau—to-day Avenue Victor Hugo.) M. Meurice officially presented the House of Victor Hugo to the mayor of Paris, M. Deville, who made a short speech of thanks to the founder and his friends in the name of the city. A delightful address by Jules Claretie, a former friend of the poet, closed the ceremony.

Not many men of letters have had a life so full and so agitated as Victor Hugo. Not only did he spend in exile nearly twenty years of it, but even in Paris he lived a rather wandering life. He occupied in succession a good many houses, and it was a question to decide upon one of them for the purpose in view. The residence in the Place des Vosges is in every way a very happy selection. Hugo remained in it for fifteen years, from 1833 to 1848. He had just carried to victory, with "Hernani" and "Marion Delorme," his revolution in the dramatic art of his country. He was only thirty-one years of age, and in a position now to give his full measure. It was there that he wrote his dramas "Marie Tudor," "Angelo," "Ruy Blas," "Les Burgraves"; the lyric poems of 'Les Chants du Crépuscule,' 'Les Voix Intérieures,' 'Les Rayons et les Ombres,' and some of the best of 'Les Contemplations.' There he manifested for the first time his strong interest in social questions, starting, under the title 'Le Manuscrit de l'Évêque,' the book which later became 'Les Misérables.' There he wrote his famous protest against capital punishment, the history of 'Claude Gueux'; and from there he set forth one night to call on the King in order to obtain the pardon of Barbès, the revolutionary leader who had been sentenced to death. There he knew, undisturbed for years, the charms of family life—sorrow came later, it is true, in 1843, when his favorite daughter was drowned with her husband in the terrible catastrophe of Villequier. There fame visited him day after day; in 1841 he was elected a member of the French Academy, in 1845 a Peer of France, and in 1848 a member of the Assemblée Constituante. Add to all this the sweetness of solid friendship. His old cofighter in the cause of Romanticism, Charles Nodier, the charming story-teller, lived in the Arsenal very near by; the enthusiastic Théophile Gautier came to occupy the corner house of the Place so as to see Victor Hugo's window and contemplate every morning "the sun rise." The great actress Rachel also chose her dwelling near the great dramatist's. To enumerate all the illustrious visitors who called at this house would be tedious. Let us add only that Hugo had the rare privilege of seeing the youngest of the young generation of those days approach him as a master they did not think of turning down, but of following—among others Banville, Baudelaire, and Leconte de Lisle. Some of his friends, it is true, followed other paths later. He saw, for instance, one evening in his drawing-room the future Empress Eugénie, who was then a girl rehearsing the choruses of "La Esmeralda." He could not then imagine that, through her marriage with Napoleon III., this young beauty was to become his most bitter enemy.

The Place des Vosges itself, where the house is situated, is full of interesting reminiscences for the hunter of archæological curiosities. Its construction takes us back to the days of Henri IV. The plan was laid out in 1604. The houses enclose the square altogether, access to the interior being through passages in the middle of two sides, under houses a little higher than the others. A covered gallery, like that of the Palais Royal, runs all around the court. It was for a time the "quartier à la mode" of Paris, the Faubourg Saint-Germain of the seventeenth century. Some of the most illustrious families of France lived there, the Rohans, the Rotrous, the Guéménés. The immediate neighborhood was inhabited by such people as Turenne, Condé, Madame de Longueville, De Thou, and Richelieu himself, after he had offered the Palais Royal to the King. The house of Hugo was then, according to tradition, the residence of the famous courtesan, Marion de Lorme, the heroine of the first drama he wrote for the stage. Some famous duels were fought in the Place des Vosges, among others that between Bussy and Montmorency-Bouteville; the first was killed in the rencontre, the second was beheaded for having disregarded the decree of Richelieu forbidding duelling. The original name was "Place Royale," but the Revolution unchristened it, and called it in turn "Place des Fédérés," "Place de l'Indivisibilité," and "Place des Vosges."

Let us now enter the house. Although Victor Hugo occupied only the third story, the whole building was deemed necessary to store the treasures of the diligent collectors. The concierge lives in the rez-de-chaussée, and the visitor is at once directed to the second floor. The staircase, wide and well lighted, is adorned with theatre posters of the most sensational *premières*, with a few amusing pictures recording some episode of the poet's life, and with caricatures, most of which sport with his forehead of legendary size. Midway between the first and second floors, a beautiful bas-relief, by H. Cros, with very sober coloring, shows the poet riding Pegasus to the Heaven of Fame.

The first room of the second floor is a vestibule, rather dark, with a few pieces of furniture, some engravings, and sculptures. The chief curiosity is an original cupboard, said to be the work of Hugo himself. The truth is, that he merely adjusted different pieces of old furniture, putting them together in the form of a cupboard that opens in such a way as to become at need a tea-table. The second room is reserved especially for paintings—some very good, some, it must be acknowledged, mediocre—inspired by Hugo's novels, dramas, or poetry. The most remarkable are a "Fantine," by Carrière, illustrating the passage in 'Les Misérables,' "Elle a tout ressenti, tout supporté, tout éprouvé, tout perdu, tout pleuré . . ."; a very impressive illustration of a chapter in 'Notre Dame de Paris,' "Une larme pour une goutte d'eau," by Luc Olivier Merson—Esmeralda offering a drink to Quasimodo in the pillory; Henner's well-known "Sarah la baigneuse":

> "Sarah belle d'indolence
> Se balance";

Rochegrosse's "Scène des Burgraves"; and Fournier's final episode of "Hernani." On the whole, the collection of engravings—those of Chifflart, Grasset, or Frémiet, for instance—seems superior to the oil paintings. A few of the pictures represent scenes in Victor Hugo's career. The "Première d'Hernani," by Besnard, has been specially admired. If the "Défilé du 26 février 1881" (Hugo's eightieth birthday) by Raffaëlli can hardly be said to be beautiful, Roll's "Veillée à l'Arc de Triomphe," on the stormy night preceding the funeral, produces a magnificent effect. In the same room are the busts of Hugo by Rodin, Dalou, and David d'Angers. The last-mentioned occupies the place of honor; it was made in 1838 when the poet was still a youthful-looking man, and, as David himself says (I believe in his 'Correspondance'), when the lower part of his face had not yet taken on such a sensuous development. Against the pedestal one beholds a huge wreath of laurels bearing these words: "À la maison de Victor Hugo, la maison de Shakespeare." It was sent for the inauguration.

Back of the *salle des portraits* is the library; but although profusely described by some reporters, the books are not yet there. On the third floor are also three rooms. In

the first we become acquainted with Hugo as a draughtsman. Most people knew that he was fond of drawing; that his manuscripts were interspersed with rather original sketches; that he liked to show to his children what marvels could be made by extending and slightly modifying an image produced at hazard by a spot of ink thrown upon a sheet of paper. But how much he had drawn, and how really artistic and powerful some of his compositions are, could be revealed alone by the rich exhibition now made accessible to his admirers. Of course, he was in this part of his activity as well as in his literary career attracted by grand, dark or quaint subjects. Grimacing faces, formidable castles of the Middle Ages, strike one as the preferred topics of his pen—he hardly ever used a pencil in drawing.

Hugo enjoyed planning the interior of a house, inventing pieces of furniture, arranging those he had to his own taste, designing frames, etc. Probably the most elaborate composition he ever attempted in this line is seen in the next room, which is a reproduction, with the original objects, of a Japanese (Hugoish Japanese) hall, to be used as a drawing-room by Madame Drouet, his famous friend at Guernsey. The complete set was bought from M. Koch, the nephew of Madame Drouet, and now the curator of the Hugo House. The visitor will do well, while in this room, to forget for one moment all Japanese art, and listen to what the walls behind may whisper in his ear. This was the spot where the poet was for years the object of a veritable worship on the part of his disciples and friends. The Romanticists met there every evening. On spring and summer nights crowds gathered in the square below, just to catch an occasional glimpse of *the* man, when after dinner Hugo came out on the balcony (removed many years ago) to breathe the fresh air. And the people on the street could think of no higher bliss than that of the people inside, who, it was mysteriously hinted, were allowed, night after night, to kiss devotedly the hand of their god, gravely sitting during this ceremony in a large armchair, placed under a huge canopy.

From the salon one passes into a rather small cabinet reproducing the study and bedroom in which Hugo lived and died, in the Avenue d'Eylau. It had been furnished by himself. One notices especially a large bed of dark wood with four columns supporting a canopy, his armchair, a high bureau in which he kept his manuscripts, and, above all, the desk at which he wrote standing, early in the morning and until his daily task was completed. He never had time to think of anything else but his inspiration while he was writing. Whenever a page was filled, he would throw it on the floor over his shoulder, and at once start a new sheet. In the evening the floor was strewn with papers, and then he picked them up, classified them, and entered them in the different compartments of his bureau. This is the sanctuary of the House; here, more than anywhere else, in this workshop of his ideas and meditations, one feels the hovering presence of the dead.

The top floor contains a host of intimate souvenirs, such as the casts of Hugo's hand in 1832, in 1848, and in 1885. Elsewhere, in a vitrine, his "habit d'Académicien," his uniform as a Peer of France, and his "caban," which he wore during the siege of Paris as a member of the National Guard. At another place, again, a piece of the little dress of Jeanne, the child that was drowned at Villequier, and so forth. A quantity of bric-à-brac testifies to the popularity of Hugo with the masses—little busts and portraits for the houses of the poor, mostly extremely ugly; cheap pictures of sensational scenes from his novels; and, finally, the innumerable little things bearing an image or only the name of Hugo as an advertisement—pipes, cigars, matchboxes, chocolate, shirt collars, studs, calendars, embroideries, writing-paper, postal cards, ink bottles, wine bottles, soap, candies, medals, buttons, etc., etc.

The only concession made to the popular taste is this bric-à-brac room. Everything else has been so disposed as not to hurt the æsthetic feelings of any one. Edmond Rostand was the first to be shown through the House by M. Meurice, and had only very flattering words for all concerned; and Octave Mirbeau, the pitiless and sarcastic slasher of all that savors of commonplace or mediocrity, could not help saying, when leaving on the day of the inauguration: "Vraiment, c'est tout-à-fait bien!" Moreover, visitors of any description or from any country will find in the museum something that appeals to them in some special way. Let us take the example of an American tourist: he will see in one room a portrait of Lincoln, with these words written in the late President's own hand: "A. Lincoln to Victor Hugo." Elsewhere he will notice one of the most striking of Hugo's pen sketches—a man hanging from the gibbet in the dark night; below, the word *Ecce*. It represents John Brown, whom Victor Hugo admired very much (most people know the letter he wrote on hearing of his death). Again, an American citizen will undoubtedly feel proud when he approaches the desk in the mortuary room. Near the pen and inkstand of Hugo he will behold the following sample of the poet's energetic handwriting, which is at the same time a testimony of his admiration for the example set to the world by the United States:

"Je représente un parti qui n'existe pas encore, le parti Révolution-civilisation. Ce parti fera le 20° siècle. Il en sortira d'abord les États-Unis de l'Europe, puis les États-Unis du monde."

There is one great originality about the House of Victor Hugo which ought to be emphasized. In other museums of this kind all that can be offered to the curiosity of the public is only, or chiefly, objects concerning the social man—the man of our conventional world. Not so here. Hugo attempted during his whole life to apply his genius to other pursuits than literature; he tried to be a carpenter, a sculptor, a draughtsman, a painter, an architect; and the exhibition of his achievements in these various fields offers to us the very rare opportunity to see what a man of high attainments, who had trained himself to be a writer, could do when he applied himself to other artistic activities. Of course, the praises recently heaped upon him by the press were often exaggerated. If one were to believe them, Hugo would have been as great an architect or a painter as he was a poet. This is not true, as it would be easy to show. But the interesting fact to observe is the extremely close relationship manifested by the ideas and methods of Hugo the writer and Hugo the artist in other domains. No one who visits the new museum can fail to be struck by this remarkable feature.

ALBERT SCHINZ.

Correspondence.

MISGOVERNMENT IN HAWAII.

TO THE EDITOR OF THE NATION:

SIR: Perhaps some of your readers will be interested in the enclosed clipping from "the oldest newspaper west of the Rockies" (the *Friend*, published at Honolulu, for December, 1903), which gives in very graphic language the result of American government in Hawaii.—Yours truly,

HIRAM BINGHAM.

CAMBRIDGE, MASS., December 21, 1903.

"Of the appalling state of our last Legislature—of the theft, robbery, graft and wholesale larceny of which they all, with but a few personal exceptions, were guilty; of the dishonesty of its members of all ranks; of the manner in which the slightest services were paid for at twice, thrice, and four times their value, and money abstracted from the public till on no pretext at all—our Federal Grand Jury has given us a splendid (though for the community a sorry) account. Space will not permit us here even to summarize their findings. Suffice it to say that the annals of no municipal government of the mainland can show a page more dark than that writ by the men we sent to make our laws and spend the money they held in trust for the community. It is a great pity that the Federal Court cannot mete out justice to these, for we had as well present them with their liberty as try them before such juries as the Territorial courts are producing at present.

"Look at the Jones murder trial! Every white man is, on one technicality or another, to be excused, and Jones to be tried by a jury as incompetent to try the simplest case as a class from kindergarten. On their verdict he will be set free, or the prediction of every thinking man in Honolulu will prove untrue. Such is trial by jury in Hawaii!"

OUTNUMBERING THE SAINTS.

TO THE EDITOR OF THE NATION:

SIR: In view of the discussion going on in Congress and in the press with regard to the qualifications and eligibility of Reed Smoot, a Senator from Utah, the following letter, signed by the then Governor of the Territory, his secretary, and the Superintendent of Indian Affairs, should have some interest for those who are giving the Mormon question careful thought and study. At the time mentioned, Judge Doolittle was a United States Senator from Wisconsin.

DUANE MOWRY.

December 21, 1903.

GREAT SALT LAKE CITY, UTAH T'Y,
4 Dec., 1865.

HON. JAMES R. DOOLITTLE:

DEAR SIR: Mr. Ashley, the Chairman of the House Committee on Territories, informed us recently that he introduced a bill at the last session of Congress, which would soon be passed, providing for annexing to Nevada a strip ½ degree in width on the west side of Utah.

Although the boundary has never been surveyed, we are satisfied from recent investigations that such partition would give to Nevada the rich mining district recently discovered in the S. Western portion of this T'y.

It is generally conceded that the proper and peaceful solution of the Mormon problem consists in introducing, by the development of our mineral resources, a population of "Gentiles" who will ultimately outnumber the "Saints." In view of this fact, it would probably delay for some time the salvation of the Territory, should the bill referred to become a law. There is little doubt that a large population of miners will, during the coming year, locate in that region; in fact, the influx is already considerable.

The delegate from this T'y will probably favor, or at least not object to, the passage of the bill. The Mormons wish as few outsiders among them as possible.

For the reasons suggested, we earnestly trust the bill may be withdrawn.

May we trouble you to give this matter your personal attention? We regard it as very important that no such partition be made.

Your ob't Serv'ts,

CHARLES DURKEE,
AMOS REED,
F. H. HEAD.

TRANSLATIONS OF ISOCRATES.

TO THE EDITOR OF THE NATION:

SIR: The 'New International Encyclopædia,' under the head of Isocrates, has the following statement concerning his orations and epistles: "They have never been translated into English, and would probably be intolerably dull in any but their Greek dress." As bearing upon the latter statement, it is certain that there are at least two translations into French, one into German, and one into Italian, not to speak of partial renderings. All of the orations were turned into Italian as early as 1555, and all the epistles into French by 1558, while Leopardi, in the last century, did not disdain to translate the first three orations (in his 'Operette Morali'). In English, beginning with Sir Thomas Elyot's 'Doctrinal of Princes,' 1534—a version of the oration to Nicocles—there are several of one or more orations, among the more conspicuous being Gillies's rendering of six (with Lysias), in 1778. Not to speak of the first volume of a Bohn translation, which appeared in 1894, the book which lies before me as I write constitutes a striking refutation of the former statement above; this is 'The Orations and Epistles of Isocrates. Translated from the Greek by Mr. Joshua Dinsdale, and Revised by the Rev. Mr. Young' (London, 1752).

The extent to which Isocrates was studied in the sixteenth century may be inferred from various sentences in Ascham's 'Scholemaster,' with Mayor's notes upon them; and that the choice was not wholly undeserved may be gathered from such a passage as this from the beginning of the 'Panegyricus,' which hardly deserves to be characterized as "intolerably dull," however few there be that accept the doctrine:

"I have often wondered that those who have made popular assemblies, and appointed public games, should have so greatly rewarded the excellency and good habit of the body, but paid no honors to such as, in a private capacity, consulted the happiness of the state, and so prepared their minds that they became an universal benefit to their commonwealths; of whom, certainly, a far greater account ought to have been made by republics and kingdoms. For were combatants twice as strong in body as they are, no advantage would redound by it to others; but if one man perfects his mind by philosophy, all that are willing may be benefited by his knowledge and prudence."

Perhaps, too, in the present posture of our national affairs, the following, from the oration to Nicocles, may be thought not wholly undeserving of consideration:

"Emulate not those who have the greatest kingdoms, but who govern best their own states. Believe me, you will not be the happier though you should be able to subject all mankind by fear and terror, but by being such as you ought. . . . Examine always carefully your words and actions, that you may fall into as few errors as possible. It is one of the greatest difficulties to seize the critical point of opportunity; but when the uncertainty is great, be cautious, rather than by boldness overshoot the mark."

This, after all, is only a counsel to avoid such excesses as Thucydides (III. 82) reprehends, when he says: "Reckless daring was held to be loyal courage; prudent delay was the excuse of a coward; moderation was the disguise of unmanly weakness. . . . Frantic energy was the true quality of a man."

In conclusion, is it not fair to ask whether the editors of an encyclopædia which aims to deserve public confidence should entrust so important a name as that of Isocrates to a hack-writer?—for surely no scholar could have made so palpable a blunder as that noted above. The article in the 'Britannica' was written by Jebb, and that in 'Johnson's Cyclopædia' by Gildersleeve.

ALBERT S. COOK.

NEW HAVEN, CONN., December 18, 1903.

THE PLACE OF HERBERT SPENCER.

TO THE EDITOR OF THE NATION:

SIR: The writer of the article on Herbert Spencer in your last issue praised the great thinker more, perhaps, than he intended, when he rested his claims on the more philosophical portion of his writings, as set forth in 'First Principles.' Students of the Synthetic Philosophy who find in it a basis of belief which unifies the material universe with "the mind of man," or binds each to each in close moral compact, are content with any pronouncement of Mr. Spencer's work and quality as a thinker which emphasizes the philosophical import of his writings; for the current opinion, among the learned and unlearned, runs the other way. "Evolution may describe the method of the world's physical growth, or of its social development, but it cannot be used as a key to unlock the higher mysteries of soul and being."

Mr. Spencer never forged a key to unlock mysteries, high or low. He was content to let mystery remain mystery, well knowing its healing and uplifting influence. His attitude here was as reverential as it was brave. Part I. of 'First Principles' has served all the purposes of a religious tract to many minds dispossessed of older, more mechanical conceptions of the universe, but eager to read the signs of a constructive order of things, still at work, capable of arousing new ideals of faith and moral devotion. The disciple of Spencer, if so damaging a phrase may be permitted, will cheerfully submit to see the 'Biology' and 'Psychology' shelved—books which have never had more than a secondary interest for him. He cares not so much for the mass of scientific data gathered here and in the 'Sociology,' to substantiate a few leading principles, as for the principles themselves. Here, also, the current opinion runs the other way, and more blindly; the assumption being an easy one, that the founder of a scientific philosophy must himself be a scientist. Mr. Spencer had a high claim here, but in his writings he appears only as a collaborator of widest range and classification. It would be no disrespect to say this even were it not with the wish to emphasize claims of a higher order.

But even "philosopher" is not the highest term of praise. Far sooner than as the author of any abstract system would Mr. Spencer choose to be remembered as the apostle of "that old English ideal of individual liberty" which you praise, which he saw jeopardized in the socialistic tendencies of these later times. That Mr. Spencer judged these tendencies rather narrowly, forgetting his own law of spiral progression, which includes the backward as well as forward movement, was quite manifest; but in an age of eager, rash experiment and impulsive acceptance of every new social nostrum, we needed and shall cherish that example of moral conviction and unswerving devotion to an ideal which Herbert Spencer has left us.

The "Philosophy of Individualism" has not an alluring sound. It recalls the harsh inductions and bleak logic of Bentham and the elder Mill, the correct but dreary results worked out in the dry light of intellect in their disciple, John Stuart Mill—a pitiful example of human precocity to the end of his days. When some of these old prepossessions have worn away, and old and new fears have been dismissed, we shall return to the reading of 'First Principles,' the 'Data of Ethics,' and some of the Essays, to surprise ourselves with the treasures of pure sentiment, lofty faith, even of human interest and affection, we find there.

CELIA PARKER WOOLLEY.

CHICAGO, December 21, 1903.

"THROUGH."

TO THE EDITOR OF THE NATION:

SIR: Your reviewer quotes with approval some stanzas from Miss Josephine Preston Peabody's "The Singing Leaves," beginning with the lines—

"I have so many things to do,
I don't know when I shall be through."

I am no philologist, and I should like to know where the word "through" got this meaning of "finished." The ordinary vocabulary of the ordinary person derives, I suppose, chiefly from the conversation of his family circle, with accretions from his general reading. From either source I confess that this use of the word is, to me, unknown. Can any of your readers refer me to an example taken from a recognized master of the English language?

Yours faithfully,

ARNOLD HAULTAIN.

TORONTO, December 22, 1903.

[Miss Peabody's child verse would manifestly have been out of keeping if she had not employed colloquialisms like the familiar one animadverted upon by our correspondent. Compare "The door is *to*," "The lights are *out*," "Is the lady of the house *in?*"—ED. NATION.]

Notes.

The Macmillan Company will publish Mr. W. B. Yeats's 'The Hour-Glass, and Other Poems,' in January. In the same month they will issue the first number of the *British Engraver*, a quarterly magazine of original work—etching, lithograph, woodcut, copperplate; and they are to be henceforth the American publishers of the *Burlington Magazine*. The November number of the *Burlington*, by the way, contains the usual variety of articles and illustrations. Mr. Berenson continues his study of that nearly unknown Sienese painter, Sassetta; Arthur Morrison writes of the Japanese artist, Kikuchi Yosai; and Mr. Pennell argues the unapproachable greatness of Whistler as etcher and lithographer; while there are articles by other writers on eighteenth-century drinking-glasses, tinder-boxes, ancient weapons of the chase, etc. An anonymous article on an exhibition of English portraits of the eighteenth century in the Birmingham Art Gallery furnishes the plates most likely to be generally relished, Hoppner's portrait of Mrs. Jordan as Hippolyta being especially delightful.

It really seems poky in the *Almanach de Gotha* for 1904 (New York: Lemcke & Buechner), to write as its editor does, on November 14, of "the independent State of Panama at this moment in process of formation." At that date it had already been recognized by our Government and hurried into treaty-making. In the appendix, newspaper reports are perforce relied upon for the personnel of the provisional Government of the *soi-disant* republic. Genuine enterprise is manifested, under the rubric *China*, in printing a greatly amplified and authoritative exhibition of the imperial house and central government, of subject lands, etc. In rehearsing the political changes of the year, what hideousness is covered up in the line: "In Servia, the house of Obrenovitch, now extinct, has been replaced by that of Karageorgevitch." Servia's new king furnishes one of the four regulation portraits of the *Almanach*, along with the King of Saxony, President Diaz, and Pius X. But for fear of offending Southern susceptibilities, we should say that the Pope bears a certain resemblance to Booker Washington, from whom he probably does not greatly differ in color.

Another "institution," *Whitaker's Almanack* (London: J. Whitaker & Sons), appears for the 36th time, for 1904, with sundry new features—large allotment of space to the burning fiscal question; a tabular history of the National Debt; a political history of the world in 1902-3. A younger companion volume is *Whitaker's Peerage*, now in its eighth issue and equally handy in its narrower line. Consider only its "index to seats and residences of persons cited in this work." This had to be curtailed in order to keep down the size of the annual, swelled by "the enormous flow of new creation"; and all but a few of the honorary knights have, for the same reason, been omitted. The *Almanach de Gotha* retrenches (but not wholly to save space) its list of princely families. When the title has been acquired abroad, it must hereafter be certified by the home government to insure the family's admission to the élite society of the *Almanach*.

In the third edition of their translation of Michel's 'Rembrandt,' the Scribners have managed, by cutting down margins and by using a slightly smaller type and eliminating leads, to get all the matter, both text and illustrations, of the first edition into one volume of smaller size and of about 500 pages. Indeed, this edition contains more than all the matter of the first. It is said, in a note, to contain "the author's latest corrections," a statement which we have not been able to verify. It also contains nine full-page illustrations which were present in the French edition and were eliminated from the English edition in obedience to what we can only call a whim of the editor, Mr. Wedmore. These nine seem to be but a part of the omitted illustrations, and there may be better reasons for the omission of some of the others; yet several of these are among the strangest and therefore most characteristic of Rembrandt's fancies, while one of them (the so-called Danaë) is perhaps his most successful attempt at the nude. This cheaper edition is therefore, to some extent, better worth having than the more expensive one.

Messrs. Scribner import the first two out of the six volumes which are to constitute a new edition of Crowe and Cavalcaselle's 'History of Painting in Italy.' We reserve for a future occasion a discussion of this monumental work, its effect upon art study since its appearance more than a generation ago, and the value it still retains. Here we express the hope that the editing of the remaining volumes will be less hasty than in the two before us. The editors' notes, thus far, besides being unduly disfigured by misprints, often tend to confuse rather than to illumine a text whose merits are seldom clearness and precision. Many of the annotations are veiled polemics. The photographic illustrations measure some of the distance travelled since the appearance of the first edition, with its outline engravings after the originals.

Mr. Adrian H. Joline, already pleasantly known to us as the author of a chatty volume on autograph-collecting, comes now before the public with 'The Diversions of a Book-Lover' (Harpers), full of lively talk about books and the whims and oddities of bookmen. Of the many anecdotes it contains, we can find room for but one: "Some years ago," says this author, "I brought over from Denmark an illuminated musical manuscript of the fourteenth century which was literally bound in boards, the wooden covers fully half an inch thick, and the book studded with iron nails. The intelligent Custom House person who greets us hospitably upon our return home, sagely classed it as 'old furniture,' imposing duties accordingly, the amount whereof I ultimately succeeded in recovering from our free and enlightened Government, much to my astonishment." Mr. Joline predicts that "the unfortunates who write notices" will pronounce his work "slight" or "heavy." One humble member of that class has not found it either.

'On the Road with a Circus,' by W. C. Thompson (New York: Isaac Goldmann Co.) gives, from a showman's point of view, a lively account of the manifold working details of that huge business enterprise, a modern circus. One sees with surprise how elaborately the coming of the show to each town is prepared for weeks ahead by a long series of advance agents, and how exactly and minutely the crowded routine of a day's performance is ordered. The difficulties of handling and transporting an army of employees and animals and a huge outfit of appliances have been so well met by the best circuses that army officers, both in the United States and in Europe, have studied the methods in use. Many of Mr. Thompson's details are picturesque, showing as they do the daily life of the circus, and he also gives a medley of entertaining anecdotes and reminiscences.

'Christian Faith in an Age of Science,' by William North Rice (Armstrong), is a sincere and calm statement by a learned orthodox professor of geology at Wesleyan University, Middletown, Conn. The author accepts the results of scientific investigation as to the age of the earth and as to the evolution of organic forms, man included; he does not demand the literal acceptance of most of the Bible miracles, but he holds fast to the miracle of the resurrection as an essential proof of the divine nature of Christ's teaching, and insists that, but for belief in this miracle, the Christian religion would not have been established. Readers less orthodox than the author will be tempted to draw a sharper distinction than he does between the absolute verity of this essential miracle and the sincere belief in its verity by early Christians. Psychologists will perhaps consider the retention of belief in the essential miracle due as much to early association and the mental habit of the author as to his examination of the Biblical record as presented in the latter part of his book. The work is, however, of interest, as showing the position held to-day by a representative member of a conservative denomination. Comparison of it with earlier productions of the same class inevitably raises the question: Will this progress in liberalization halt at the stage now reached by Professor Rice?

American scholarship occupies no inconspicuous place in Professor Saintsbury's 'Loci Critici: Passages Illustrative of Critical Theory and Practice from Aristotle Downwards' (Boston: Ginn & Co.); and it is, in fact, partly to the suggestion of Professor Gayley of California that the book owes its existence. But though Professor Saintsbury and his American adviser have perhaps exaggerated the academic demand for such a text-book of critical passages, most of them fragmentary and dislocated from their context, no slight service has been rendered to a wider audience in thus furnishing in English dress a selection of the significant critical *loci* from Aristotle to Matthew Arnold. British insularity alone can account for the exclusion of all but English critics during the nineteenth century; and even earlier, the selection does not always represent the European trend of critical thought. Petrarch, Erasmus, and Voltaire, each in his age the intellectual arbiter of Europe, nowhere appear, and in the case of Voltaire at least the omission is inexcusable. Boileau and Lessing are each represented by a page of brief selections, receiving less space than either Shenstone or Hurd. The Italian critics of the sixteenth century, the French and Spanish of the seventeenth, and the German of the eighteenth appear in a few fragmentary and disjointed passages, which (regardless of the question whether their importance might merit longer treatment)

scarcely give any adequate conception of their point of view. In rendering classical and foreign selections, Professor Saintsbury has in almost all cases been his own translator, but it is an open question whether his rugged literalness justifies the attempt. A more catholic taste and a narrower range of selection, with the exclusion of all but long citations from the great masterworks of criticism, might have made this interesting compilation more serviceable and more suggestive as an academic manual.

In this connection, a brief paper by the well-known Italian critic, Benedetto Croce, "Per la Storia della Critica e Storiografia Letteraria" (Naples: Tessitore), read before the Accademia Pontaniana, may be recommended as illustrating that consistency in the point of view which may be looked for in vain in Professor Saintsbury's treatment of critical problems. Signor Croce conceives the history of criticism to be the "history of concrete critical production, considered according to the relation of assistance or obstruction which is given it from age to age, both by the state of philosophic theories and by that of erudition and taste." Such a history is naturally divided into three parts—the first treating of the vicissitudes and of the progress of the critical attitude or method in general, the second of the particular results thus attained, and the third of the organization of these results and their construction into literary history proper. This is illustrated by an outline of the history of criticism, with special reference to the nineteenth century, which is replete with suggestiveness. A similar but more extended outline had been given by the illustrious De Sanctis in a course before the University of Naples, 'Storia della Critica da Aristotile ad Hegel,' over half a century ago. The MS. from which the lectures were delivered has recently been discovered, and it is to be hoped will soon be given to the world.

The plates in parts 11 to 14 of 'Hundert Meister der Gegenwart in Farbiger Wiedergabe' (Leipzig: E. A. Seeman; New York: Lemcke & Buechner) are not so uniformly gaudy in color as those in some of the earlier numbers, and one or two or them have some interest and dignity of design; but these numbers do not, generally speaking, rise far above the average of the publication, which we have not been able to praise.

The leading position which Germany is rapidly taking in the commercial world is strikingly shown in the Consular Reports for December. While the articles relating to Great Britain and France number fourteen and fifteen respectively, there are forty-two reports and notes about German trade, industries, inventions, and scientific experiments. The most valuable of these is by Consul-General Mason of Berlin on potato cultivation. To what a height of perfection this has attained can be realized from the fact that the yield per acre in 1901 was 217.68 bushels, in the United States 65.5, the totals being in round numbers two billion bushels in Germany, two hundred million in this country. This success is due largely to the fact that the crop is not grown from seed raised in the same locality, but from places radically different in condition. The intelligent farmer "rarely plants seed potatoes from his own fields, but exchanges with his neighbor or obtains new varieties from the experiment station. . . . Potatoes grown on high hill slopes are brought down and planted in valleys; the product of heavy, wet land is planted in light, dry soils; the growth of sandy fields is the best seed for loam or moorland, and vice versa. Potatoes brought from Scotland have produced some of the largest and best crops ever grown in Germany." Attention is drawn to the destruction of the rubber forests in Brazil, which, on account of the high prices, it is expected "this year will be beyond all precedent—enormous and irreparable"; and to the establishment in 1902 of an industrial school in the French Sudan for the purpose of teaching the natives the best methods of rubber culture. There have been more than 150 pupils, and good results are already shown in the new plantations and in the preservation of the old vines and trees through intelligent ways of collecting the juice.

Two articles of unusual interest on mountaineering in Alaska have lately appeared, both by members of the United States Geological Survey. One, by A. H. Brooks, gives an account of explorations around Mt. McKinley, "America's highest mountain" (*Journal of Geography*, ii., 1903, 441-469); the other, by W. C. Mendenhall, describes the Wrangell Mountains (*National Geographic Magazine*, xiv., 1903, 395-407). Both articles are well illustrated, showing the scenery to be of the finest order. Travelling is difficult from the lack of trails through forested lowlands, from the number of large rivers, from the extensive snowfields and glaciers on the higher slopes, and from the plague of mosquitoes and flies. The ascent of Mt. Wrangell is "earnestly recommended" to our mountaineering clubs. The natives of the region are naturally astonished at the white invader, who is feared for his numbers and his ability, but who is past all understanding. His restless search for gold or other useless stuff, his abundance of all greatly desired things—clothing, food, guns, tobacco—his curious doctrines about right and wrong, and property and work, altogether make the white man quite beyond native comprehension.

The Sierra Club Bulletin (San Francisco) likewise contains articles of interest to mountain climbers. The outings of the Sierra Club are doing much to make the attractions of the southern Sierra Nevada known to Californians, although climbers from the Eastern States as yet know little of that rocky wilderness of peaks and cañons. A party of nearly fifty men and women made the ascent of Mt. Brewer, 13,886 feet, in the summer of 1902.

The Geological Survey of New Jersey has just issued four revised sheets of its State Atlas (scale of one inch to the mile). They are approximately of a dimension two by two and a half feet, and so embrace some 700 square miles. Dwellers in the metropolitan district will appreciate sheet No. 26, which takes in nearly all of New York city, with part of Brooklyn, all of Staten Island, and the adjacent country as far north as Yonkers and Paterson, and west as Short Hills. The other sheets are No. 27, the lake region, from Hopatcong to Port Jervis; No. 24, the Delaware River section from Frenchtown to Belvidere; and No. 27, the Trenton corner, with a bye-map for that city and its environs.

The American Women's Table at Anton Dohrn's Zoölogical Station at Naples is again open for appointments to scholarships. Application blanks and information as to living expenses, etc., may be obtained by candidates for 1904 from the Secretary, Cornelia M. Clapp, Mt. Holyoke College, South Hadley, Mass., before March 1.

—'Hohenzollerns and Heroes' is the title which Mr. Poultney Bigelow gives to the third volume of his "History of the German Struggle for Liberty" (Harper & Bros.). It purports to cover the period from 1815 to 1848; but the reader will search in vain for anything resembling a coherent narrative of events. The revolutionary movement of 1830 is not described, but several phases of the movement of 1848, which is to be treated in a fourth volume, are anticipated. The book is a series of chatty essays on the religious, intellectual, economic, and political conditions of the time, illustrated by biographical sketches of such Germans as Jahn, Sand, Blum, Schön, Lassalle, Simon, Reuter, Strauss, and Wagner. A number of chapters, like those on Kossuth, Mazzini, and De Tocqueville, have only an indirect bearing on German developments. Although the book is not a history, it throws light on the history of the period, for Mr. Bigelow has known Germany and its people at first hand for many years. Readers need not be warned that the author's judgments are highly subjective, for he reveals his personal likes and dislikes with complete frankness. For the Hohenzollerns who figure in this volume, the third and fourth Frederick Williams, he manifests a hearty contempt. The book is marred by numerous misprints, especially in citations from the German, and there is no index. Since, however, the author denounces some of the German historians for publishing unindexed works, it may be assumed that an alphabetical guide to the whole history will appear in the last volume.

—'The Sailor King,' by Fitzgerald Molloy (Dodd, Mead & Co.), offers an illustration of bookmaking in its easiest form. The real subject is the reign of William IV. rather than the career of the sovereign himself, and, by virtue of a comprehensive definition, everything is deemed good plunder which can be borrowed without inconvenience from Greville, Trevelyan's 'Macaulay,' and other memoirs of the time. Now and then, it is true, Mr. Molloy seems rather at a loss for material, but in such cases he resorts to the simple device of reverting to previous reigns. The tenth chapter of his first volume is filled out with an account of Shelley's matrimonial affairs, which goes back to the days of William Godwin and Mary Wollstonecraft. Similarly, the seventh chapter of the second volume is devoted to a loose-jointed narrative of Edward Irving's early life, with Jane Welsh and Thomas Carlyle roaming in at intervals. By dint of pillaging several famous biographies, two volumes are thus made up, but for ourselves we prefer, if it comes to a choice, the one volume of Mr. John Ashton, entitled 'When William IV. was King.' Those who wish to judge for themselves, will find little difficulty in drawing certain inferences from the first two sentences of Mr. Molloy's preface: "The reign of William IV., whilst too remote for personal recollection and too recent for history, covers a space in our annals of which comparatively little is

known. Yet its seven years are wells of interest, arising from sources intellectual rather than political; for the Sailor King reigned over subjects whose works remain our proud heritage, whose names are dear to us as those of kin, whose intimate histories, touched with the glamour of romance or with direful tragedy, exercise a spell impossible to fiction and felt only in watching the actions of mortals unconsciously obeying the dictates of fate."

—Mr. Martin Hume's 'Love Affairs of Mary Queen of Scots' (McClure, Phillips & Co.), is also styled by its author "A Political History." In other words, this is not a book of gossip or scandal, but, like 'The Courtships of Queen Elizabeth,' a study of matrimonial diplomacy. Mr. Hume divides the sixteenth century into the virile first half, which is dominated by Charles V., Henry VIII., and Francis I., and the feminine second half, which is dominated by Elizabeth Tudor, Mary Stuart, Catherine de Médicis, "and the cautious, timid, narrow, almost womanish Philip II." The main characteristic of the latter period is that the current policies were feminine, if not feline. Under such circumstances, marriage negotiations, always a prominent adjunct of autocracy, acquire special prominence. Elizabeth played the game for herself, and Catherine de Médicis for her children. As for Mary Stuart, she doubtless had her loves, but her courtships were more numerous than her genuine affairs of the heart. Mr. Hume finds one main cause of her failure in the attempt to imitate Elizabeth's diplomacy without possessing her exceptional advantages. Mary's greatest disadvantage in his eyes was that she did not possess self-control. "We shall see that the deplorable errors and follies that led her downward from freedom to life-long imprisonment, from happiness to misery, from a throne to a scaffold; that warped her goodness, made her a helpless plaything for her cunning enemies, and ruined the religious cause she loved better than her life, were the outcome, not of deliberate wickedness, or even of habitual political unwisdom, but of fits of undisciplined sexual passion, amounting in certain instances to temporary mania, combined with the unquenchable ambition inherited from her mother's house." This is the leading thesis, and it is developed with much skill by one who does not believe that the "Casket Letters" are altogether forgeries. We have defined Mr. Hume's position. We are unable to follow his arguments in detail, for they would lead us deep into the mazes of an interminable controversy. If predestination means anything, there must be some ante-natal power which determines whether we shall believe that Mary Stuart was a saint or a wanton.

—The immediate charm and sterling value of Prof. Ernest W. Clement's 'Handbook of Japan' lie in the fact that he speaks for the most part from immediate knowledge and experience, and from an inside view. Sixteen years ago he was called, as one of a band of young American teachers prepared to work in sympathy and brotherhood for the Japanese, to the province of Mito, one of the most famous of Japan's modern seats of learning as well as of political agitation. Fascinated with the new land and its old history, he at once entered upon systematic researches, and was soon able to prepare for the Asiatic Society some of its most valuable papers. Continuing in his work of education in Tokio, and making a careful study of political development and national history, he has gathered into his volume of nearly 400 pages (Chicago: A. C. McClurg & Co.) a well-digested mass of knowledge concerning the country and people which is likely to be wanted constantly on the table of most intelligent people interested in the Far East and its possibilities. The book is liberally illustrated, besides having a map, a rich appendix, with statistics and tables, and an index. It lacks little to be desired of clear discussion and statement in the twenty-one divisions of the text, and there is a choice and liberal bibliography at the end of each chapter. Besides physiography, industry, travel, transportation, manners and customs, and the history of both old and new Japan, Professor Clement treats with remarkable clearness the more modern phases of constitutional imperialism, local self-government, "Japan as a World Power," and the working of the new law codes and systems. One interesting chapter reveals the position of the new woman in Japan—almost a different being in the eye of the law from her grandmother. Professor Clement is very full on the language, literature, and religions, giving four chapters to the phases of spiritual thought and life, so that it is doubtful whether one can find these profound subjects treated more fairly and fully, with such conciseness, anywhere else than in this book. Like nearly all those who know the Japanese thoroughly and have worked long with them closely and in coöperation, the author is optimistic as to the future of the nation and the empire. With Virgil, he believes that the Japanese "bring success their zeal to fan," and that "they can because they think they can." The selection of portraits and other illustrated matter is very rich and appropriate. Handsomely recognizing his indebtedness to other writers, this modest scholar acknowledges special obligations to Prof. J. H. Wigmore, formerly of Tokio, and now Dean of the Law School of the Northwestern University in Chicago, whose masterly letters to the *Nation* on constitutional development in Japan, during a critical period, well deserve to be reprinted.

—Dr. Arthur J. Evans, in the second of three lectures before the University of Oxford, which has just honored itself by admitting him to the degree of D.Litt., endeavored to fix certain leading points in the chronology of Minoan Knossos. There, as elsewhere, the successive evolution of various styles of pottery affords the steadiest and least uncertain clue. Already during the first year's excavations a connection was clearly made out between the latest flourishing Minoan period at Knossos and the eighteenth Egyptian dynasty. Furthermore, the evidences of Cretan seal-stones shadowed forth a point of contact with the twelfth Egyptian dynasty. Now, with the few sporadic Egyptian finds of the second, third, and fourth year's campaigns, and an especial study of the earlier phases of ceramic art and of the fashioning at Knossos of stone vases, points of contact with the Twelfth Dynasty of Egypt have become much clearer, and to these have been added the most indubitable evidence of relations with Egypt under the very earliest dynasties, particularly the sixth and the fourth. Dr. Evans's periods, taken backwards, are accordingly as follows. Latest of all, and identified by extensive finds of "geometrical" or "dipylon" pottery, near the surface, is the period when, presumably, the palace had been plundered and burned by northern invaders, and the site was in the hands of people more or less rude and primitive. The date for this would be nearly 1000 B. C. The next period is late Mycenæan, dates about 1500 B. C., and shows degenerate designs and slack workmanship. Next comes a period of marvellously perfect naturalistic designing, which may be centred at about 2000 B. C. or earlier. Behind this lie most beautiful specimens of egg-shell pottery with beautiful colored designs; and last of all, at the very beginning of things artistic at Knossos, we have stone imitations of the stone vases of the fourth and earlier Egyptian dynasties.

—During the third week in November, Dr. Evans presented before the Academy, and also in a public lecture at Oxford, the accumulating results of such study as his Knossian excavations have allowed him to make of the various inscriptions and sealings on clay, the engravings on seals, and the ink-written records on pots which have rewarded his four years' digging in the Minoan Labyrinth. With these he has combined a study of similar inscriptions recently unearthed by Professor Halbherr on other Cretan sites. Viewed in the light of his now more definite Knossian chronology, the several kinds of script connect themselves with successive phases of Minoan civilization. To begin with, there is the pictographic alphabet (we boldly misuse the term alphabet for clearness' sake), which has marked affinities through early Cretan "button-seals" with certain Egyptian picture-signs that go back to the Sixth Dynasty and earlier. This pictographic alphabet developed into an early linear alphabet which must be connected with the earlier palace upon the Labyrinth site. Dating this linear alphabet in the neighborhood of 3,000 B. C., since the chronology is cleared up by connections with the era of the Twelfth Egyptian Dynasty, we find that there was a sudden change at Knossos, accompanied by a second linear script (in some ways, though not in all, an improvement on the first). The numerals of both scripts are based on the decimal system, but the second linear script has a much more clearly and conveniently framed number of signs. This second linear script seems to associate itself with the later history of the site, although the pictographic system was never abandoned entirely; it apparently became more and more artistically pictographic and less and less a scheme of conventional signs. The ink-written records on pottery are examples of a cursive script formed upon the second linear, much as our handwriting is formed on the Roman alphabet. Mr. Evans has added to the identified group of signs meaning *total*, groups or signs evidently meaning *vase*, *man*, *woman*, *slave*, and the like. He has clearly made out terminations masculine and feminine, so that at the meeting of the Academy his general account was sufficiently specific to be met half way by Professor Conway's recent observations upon characters found elsewhere in Crete. The language was everywhere the same, and everywhere inflect-

ed. This indicates a different ethnography in early Crete from that recorded by Homer, which of course does not reach back to the latest date of the Minoan Labyrinth.

MACAULAY AS AN ESSAYIST.

Critical and Historical Essays by Lord Macaulay. Edited by F. C. Montague. 3 vols. London: Methuen & Co.; New York: Putnams. 1903.

"If, in conclusion, we ask what is the distinctive merit of Macaulay's historical essays, the merit which redeems imperfect knowledge, superficial philosophy, and overheated eloquence, it might be answered that these essays are admirable specimens of popular writing in the noblest acceptation. Books which try to make history popular too often sink into silliness or vulgarity. But these essays, which have done more than any other book to kindle the desire for historical knowledge in myriads of young and untrained or busy and preoccupied minds, are not written down to the nursery or the market-place. They are the free outflow of an active and richly stored intelligence. . . . It is the scholar and the statesman who speaks; and if the partisan too often speaks also, he is an orator who addresses a senate, not a ranter who amuses a crowd. To these merits much gratitude is due, and many faults may be pardoned."

This passage from Mr. Montague's Introduction to Macaulay's 'Critical and Historical Essays'—writings which, from the moment of their appearance, became classics—arrests attention. It brings before us the feeling entertained by Englishmen who claim to be in a special sense men of culture towards the most widely read of English historians. These men acknowledge against their will the presence of an indescribable something in Macaulay's writings which belongs to genius alone, and which may well, in Mr. Montague's words, be described as the "possession of unique qualities which causes books as well as men to be held in loving remembrance." Yet our superior persons are almost ashamed of their involuntary admiration for a writer of extraordinary power, and, when they venture on eulogy, express it in terms which closely resemble depreciative apology. In truth, Macaulay belongs in spirit to a different and a more robust and manly age than ours; and censors who have not the vanity to claim half his gifts or a tenth of his knowledge, feel that somehow or other Macaulay does not command their sympathy, and that appreciation must take the form of patronage. The aim of this article is to weigh the force of the specific charges brought by the fairest of his censors against Macaulay. The censures may be brought under a few definite heads.

Macaulay's knowledge, we are told, is imperfect. If by this charge is meant that in hastily written essays which deal sometimes with periods to which Macaulay had not been able to give minute attention, he falls into errors which at this time of day it is easy to detect, the accusation may often be made good. If, on the other hand, it is meant that Macaulay wrote on subjects on which he had no knowledge, the charge is one which Mr. Montague's own notes confute. One, indeed, of Macaulay's peculiarities—namely, his tendency to introduce with extraordinary art into many of his essays interesting digressions which have little to do with the book that he is nominally reviewing—is due in a great degree both to the exuberance of his knowledge and to his intense desire to write only about topics which he understood. Mr. Montague corrects with unflagging assiduity any errors to be noted in the essays; and, as we read Macaulay's pages and notice the trifling character of the corrections suggested by a well-informed commentator, we are far more struck, as were Macaulay's contemporaries, by the profusion and extent of his information than by the occasional mistakes as to fact or his occasional rashness of judgment. He possessed, indeed, in his own memory stores of information which profound scholars can often find only by reference to their libraries or their well-stocked note-books. It is this mass of remembered and fully appreciated facts which often makes a few lines of his writing, whether in verse or in prose, absolutely teem with allusions.

Take one stanza from the lament of a vanquished Protestant over the battle of Moncontour:

"Alas! we must leave thee, dear desolate home,
To the spearmen of Uri, the shavelings of Rome,
To the serpent of Florence, the vulture of Spain,
To the pride of Anjou and the guile of Lorraine."

Not one of these four lines fails to suggest the memory of some definite fact, not a single epithet fails of appropriateness, each would need many words to explain and justify its significance. The modern heroes of research, who in many cases have explored nothing, are in no position to criticise the author whose mind was, from his youth up, filled with a knowledge of the past which by most of us can hardly be acquired by laborious investigation.

Macaulay, it is alleged, is a mere partisan. Here a censor hits a real defect. Macaulay was occasionally wanting in judicial calmness; he lacked the quality of scientific disinterestedness. But this defect, in so far as it really existed, was of a peculiar character and was closely connected with a rare merit. His partisanship, if so it is to be called, was not indifference to truth; it had nothing to do with the morbid vanity of a paradox-monger which leads one eminent writer to paint Henry VIII. as a model king and to see manly virtues in the violence of Frederick the Great's father. Macaulay's partisanship was nothing but the weak side of splendid historical imagination. By the combined force of imagination, memory, and knowledge, Macaulay often lived in the times of which he wrote. He was not so much the historian of the Whig Revolution as a Revolution Whig. He looked at Charles II., at Penn, at Marlborough, or at William with the eyes of these men's contemporaries. He succeeded in imbibing the very spirit of 1688. From Macaulay you cannot expect the balanced judicial, scrupulous, and not unfrequently lifeless estimates of the great men of the past which are to be found in the pages of S. R. Gardiner; but though Macaulay may be insufficiently judicial, he is never in intention unfair, nor are his estimates of character deserving, as a rule, either of intellectual contempt or of moral reprobation. No doubt men in whom religious sentiment was blended, as it often is, with a certain amount of moral obliquity, were to Macaulay incomprehensible, But in dealing with ordinary men actuated by the motives which generally guide Englishmen in secular concerns, Macaulay's judgment is generally sound enough. Take, as an example, his estimate of Clive. It was denounced by Brougham as containing the most "profligate political morality." Of it the ex-Chancellor writes in 1840:

"His defence of Clive, and the audacious ground of it, merit execration. . . . No, no; all the sentences a man can turn, even if he made them in pure taste and not in Tom's snip-snap taste of the Lower Empire—all won't avail against a rotten morality. . . . What? Are we gravely to be told, at this time of day, that a set-off may be allowed for public and, therefore, atrocious crimes, though he admits that a common felon pleads it in vain? Gracious God, where is this to end! What horrors will it not excuse!"

And so forth and so forth. Put all this moral Pecksniffianism, uttered by one of the most reckless and most untrustworthy political adventurers of his time, side by side with a few words from Macaulay's clear and temperate summary of Clive's position when he stood practically on trial before the House of Commons:

"It was clear that Clive had been guilty of some acts which it is impossible to vindicate without attacking the authority of all the most sacred laws which regulate the intercourse of individuals and of States. But it was equally clear that he had displayed great talents and even great virtues; that he had rendered eminent services both to his country and to the people of India; and that it was in truth not for his dealings with Meer Jaffier, nor for the fraud which he had practised on Omichund, but for his determined resistance to avarice and tyranny, that he was now called in question. . . . Clive committed great faults; and we have not attempted to disguise them. But his faults, when weighed against his merits, and viewed in connection with his temptations, do not appear to us to deprive him of his right to an honorable place in the estimation of posterity."

Who will deny that here, at least, the alleged partisanship of Macaulay pronounces the final judgment of history?

Macaulay—and this is the last charge we will consider—is a picturesque and not a scientific historian. This allegation contains a real meaning, and a meaning which deserves attention. Let us consider for a moment what its meaning is. An historian, we shall find, may take two different views of his office. The one is that history ought to be the impressive narration of ascertained facts. This view does not dispense the historian from the duty, a duty often excessively difficult to discharge, of ascertaining the truth; but it does impose upon the historian another function which not one man in ten thousand is capable of discharging, namely, the orderly and effective narration of complicated and often of obscure events. To Macaulay, history was primarily narration, but narration (and this is a point which modern historical inquiries overlook) is a work of stupendous difficulty. The man who can perform it must have an immense quantity of facts clearly before his mind; he must also have the genius to arrange them in perspicuous order. In this power of narration Macaulay stands a head and shoulders above all modern English writers. Froude, of whose inaccuracies we say nothing, may draw pictures as brilliant, though by no means as truthful, as scenes painted by Macaulay; but then Froude is, in spite of his high literary gifts, a confused narrator. Stubbs has in some directions a learning to which Macaulay could lay no claim, but we doubt whether Stubbs ever drew a picture of a man or a scene which any one could remember for five minutes.

The late S. R. Gardiner is unrivalled both in his special knowledge of his subject and in his laborious candor, but the later volumes of his great work degenerate from a history into a sort of Annual Register, and, but for his small but masterly sketch of the Thirty Years' War, we might have doubted his capacity to take a general view of an historic period. If, then, to be a great narrator of past events is the function of a powerful historian, Macaulay is entitled to a very high place indeed among English historical writers.

But there is another view of history which gives a very secondary place to narrative. Historical inquiry is on this view essentially research. The duty (and the glory) of an historian is to discover new facts. This idea is one naturally acceptable to a large body of English students at the beginning of the twentieth century. If history be research, then an investigator into the events of the past is placed in a position bearing a real resemblance to the position of a man occupied with physical science. Historical, in common with scientific, research makes discoveries. An historian, in common with the scientific student, may dispense with literary gifts; a discovery remains a discovery, however clumsily it be described. Nor can it really be doubted that this way of looking at history contains a large amount of important truth. Still, it has defects. Research increases the knowledge of the past, but it does not increase our capacity for understanding facts which are already known. Research, too, is apt to degenerate into antiquarianism. Discoveries differ greatly in importance; a petty discovery has as little significance as a petty invention. An inquirer who should establish for certain that Francis was the author of Junius's letters would render real service to the world by checking in one direction the futile expenditure of valuable labor; but the ingenious inquirer who ascertained exactly the length of Johnson's residence at Oxford rendered the pettiest of petty services to the cause of truth. The devotee of research should never be allowed to deceive himself with the idea that a discovery, because it cost much trouble, is therefore worth the trouble which it cost.

Research, lastly, and this is a grave matter, does little or nothing to stimulate the capacity for thought or to strengthen the judgment. The belief, then, that history is primarily research is the article of a narrow and one-sided creed; and to the devotees of research Macaulay's writings are a perpetual protest against the danger of confounding antiquarianism with historical study. A critic may say, and with possible truth, that Macaulay's theories are commonplace, and that his rhetoric is often marred by too much emphasis; but a candid critic cannot deny that Macaulay has one transcendent merit: he can make a past age visible and interesting to ordinary Englishmen. Hence his popularity. But this popular admiration cannot be obtained by mere research. The knowledge of this fact imports a bitterness into criticisms of Macaulay. The student who labors through piles of books and manuscripts to ascertain some undiscovered fact has his own and his appropriate reward, but he cannot always look without envy upon the transcendent narrator who, in virtue of a gigantic memory and of lifelong reading, could tell the tale of the past so as to arrest the attention of crowds who are in general very indifferent to the course of history.

ABBOTT'S BEECHER.

Henry Ward Beecher. By Lyman Abbott. Boston: Houghton, Mifflin & Co. 1903.

Dr. Abbott is nothing if not facile, and the latest of his many books is written with his characteristic editorial freedom and expansion—increasing as he goes on. Whatever defect inheres in this biography, it does not smell of the lamp. It reads as if written from the surface of the writer's mind, and the verifying of dates and incidents has been confessedly the labor of a friend. A consequence of this manner of writing is a certain looseness of arrangement and lack of chronological order and detail that is not agreeable, and is sometimes baffling. But then it should be remembered that Dr. Abbott is remarkably well qualified for writing in this manner. This is not his first Life of Beecher. In 1883 he composed a much fuller one, in collaboration with the Rev. S. B. Halliday. He has handled the same subject in many different ways. As editor and assistant editor of the *Christian Union* he had long and intimate association with Mr. Beecher, and his ten years' pastorate of Plymouth Church afforded him continual access to the tradition of Beecher's pulpit and parochial work. For the manner of Mr. Beecher's domestic life we are referred to Dr. Abbott's earlier biography. Here the omission is so absolute that it makes a painful void. Mrs. Stowe's absence is equally conspicuous, and there is not a word concerning the bond of affection which knit the brother and sister so closely together in their maturer years. Incidentally, 'The Minister's Wooing' is referred to as Mrs. Stowe's "most effective and striking fiction"—a courageous opinion, if not a valid one. But Dr. Abbott's opinions are often strikingly individual, as where Charles G. Finney is reckoned with Beecher and Bushnell one of the three greatest leaders of religious reformation in America in the nineteenth century.

In an introductory chapter on "The Meaning of Mr. Beecher's Life," we have the assurance, strengthened as we go on, that his service did not lie so much in any definite contribution to theological opinion as in a change made in the atmosphere of religious thinking and living. Bushnell is exhibited as the prophet of faith, Finney as the prophet of hope, and Beecher as the prophet of love—distinctions required by the exigencies of the Pauline text rather than by the qualities, severally, of the three men. The chapter ends with Beecher's notorious answer to his own question, "Could Theodore Parker worship my God?" It would be a mistake to regard this answer as so much golden dust stirred up by Mr. Beecher in his rhetorical flight before the face of an unjust suspicion. It was highly significant of that fundamental agnosticism which attracted him so powerfully to Herbert Spencer a little further on.

A second chapter, "The Making of the Man," brings us to the end of Beecher's course at Amherst College. His father is dimly outlined. The mother would have been enthusiastic in her love of music and art if she had had opportunities to develop a taste for these things, and from her potentiality Henry derived his actual love of them; also his love of nature and "that femininity of character which endeared him to those who knew him best." Coming to his college life, again we have the nice old story that he once stood next to the head of his class—when it stood in a circle. Nothing of his college studies clung to him better than phrenology, a personal elective. Its terminology was always at his tongue's end, and in his 'Yale Lectures on Preaching' he cordially recommended it as a means of knowing men. Hence, perhaps, a measure of truth in Edward Eggleston's judgment, that no one knew *man* so well as Beecher, *men* so ill. Even while in college he did some lecturing, once earning ten dollars, with which he bought an edition of Burke—as if the oratorical instinct had by this time developed and he knew its proper food. When in 1834 he went to Cincinnati and entered Lane Seminary, Lyman Beecher's theological school, he came close upon the heels of that uprising and secession of anti-slavery students which was so important at the time, and which, had young Beecher arrived a little earlier, might have proved seriously embarrassing. Apparently he did not chafe under the yoke from which Theodore D. Weld and his impassioned young fraternity broke away. But of these things Dr. Abbott catches nothing in his net. The interest that attaches to all brave beginnings attaches to Beecher's first settlement in Lawrenceburg, Ind., on a salary of $300, with married life begun in two rooms over a stable at a rental of $40 a year. It was a far cry from these things to those of later times, when a salary of $20,000 did not begin to pay the bills. The eight years in Indianapolis were remarkable for their rude simplicity. The capital city was then an unkempt village, gambling and drinking its distinctive social traits. These, furnishing the young preacher with a measure for his courage, also in their amelioration furnished some proofs of the reality of his backwoods ministry.

A good chapter upon "Plymouth Church," the building, the organization, the development, brings us to a better, "The Pastor of Plymouth Church," a generalized description with some concrete particulars. It will be a surprise to many that Beecher was "in person slightly under six feet," unless by "slightly" we are to understand three or four inches. "He was not in any ordinary sense of the term a pastor." "He was not always to be had for either the funerals or the weddings of his great parish." At the back of his oratorical preeminence was a long course of rigorous training in the use of his lungs, his arms and hands, his throat and voice. Much that seemed nature was second nature—a system of acquired traits, their acquisition requiring more patience in the boy than the grown man possessed. Dr. Abbott protests that Beecher's preaching was not extemporaneous, but Mr. Beecher's own account of it compels us to a different opinion. From a dozen or more topics lying in his mind during the week he would choose one on Sunday morning after breakfast, begin to write with some fulness, abbreviating more and more as church-time drew near, and breaking off where he must. Later there was no writing out; only a few notes. Almost everything that Beecher did was done in this free-and-easy, happy-go-lucky way, his editorials equally with his

sermons; his lectures generally were written out. Nothing impresses us more clearly in Dr. Abbott's book, or more painfully, than the lack in Beecher's preaching and writing of any body of thought from which effective extracts can be drawn. The number of such in these pages is astonishingly few, and we view here the penalty of his method in the entire absence from his mind of any habit of meditation, without which it is almost impossible for an element of permanence to reside in utterances that for the moment may strangely move the listener with their emotional force.

Dr. Abbott's inevitable chapter is the sixth, "Parenthetical." It is the one chapter we were sure to have; its purpose, to declare and prove that Mr. Beecher was "not an abolitionist." The chapter "Under Accusation" does not repel the Tilton charge with so much vehemence as the chapter "Parenthetical" and that next succeeding repel the popular misconception that Beecher was a follower of Garrison. Several pages are devoted to an exposition and arraignment of Garrison's position, with slight regard to the development of his opinions. The uninformed are left to suppose that disunionism was central to his doctrine from the start. On the other hand, it should be remarked that Dr. Abbott does not, like some others, hold Garrison responsible for the South's increasing devotion to slavery and for the increase of pro-slavery sentiment in the North. Indeed, we have had much worse accounts of the development of the Slave Power and its ambitions than this of Dr. Abbott's. But in declaring that Beecher was not an abolitionist, he does him less than justice. He was not a Garrisonian abolitionist; but all the abolitionists were not Garrisonians. The end of Beecher's anti-slavery activity was not merely prevention of the extension of slavery—it was its ultimate destruction, to which he thought the compromises of the Constitution looked. Following up Webster's 7th of March speech, for which Dr. Abbott has a generous apology, Mr. Beecher, contrasting slavery and freedom, said: "One or the other must die"—anticipating by three weeks Seward's "irrepressible conflict," by nearly ten years Lincoln's "divided house," but much farther in the rear of many others. Chapter viii., "The Anti-Slavery Reformer," is a vivid presentation of Beecher's anti-slavery activity. The poorest part of it was his ingenious perversions of the Bible to his philanthropic ends. Dr. Abbott's retrospective anti-slavery sentiment dates apparently from the assault of Stephen A. Douglas on the Missouri Compromise in 1854. He does not seem to see that the line of direction from Garrison's abolitionism through the Liberty and Free Soil and Republican Parties was a line of ever doubtfuller concession, and that in 1856 and 1860 the Republican platforms were conspicuously silent in regard to both the Fugitive Slave Law and the abolition of slavery in the District of Columbia. He seems to smile approval on the impossible concessions (Lincoln *judicc*) proposed by Charles Francis Adams in the doleful winter of 1860-61. But Beecher is represented as standing inflexible when even Sumner quailed before the gathering storm. Mr. Pierce's careful biography of Sumner is convincing that Sumner was inflexible for the Union and against compromise, and Mr. Beecher's Boston lecture of November 27, 1860, conveys the impression that he had at least a momentary inclination to the peaceable permission of secession.

There is a good testimony to Mr. Beecher's course during the civil war, and to his "campaign in England." The incidents of this are well described, and the claim made for its influence probably does not exceed the fact. The solid core of intellectual heat was, perhaps, too much obscured by the dazzling photosphere of humor, eloquence, and repartee. In the "Reconstruction" chapter Beecher's agreement with President Lincoln and Gov. Andrew on a policy of conciliation is counted to him for political wisdom; so, too, his hesitation at negro enfranchisement, though in general his predilection for universal suffrage was extreme. But Dr. Abbott clearly apprehends the difficulties that beset the path of reconstruction, and recognizes that what now seems best to careful retrospection may not then have been possible, or have had the best reasons on its side. Beecher's immense laudation of Andrew Johnson is passed over trippingly, and, indeed, Dr. Abbott is an adept in his avoidance of concrete particulars that do not redound to the glory of his friend.

The chapter "Under Accusation" will be entirely satisfactory to those who need no persuasion to its view, and equally so to the new generation who remember nothing of the long-drawn misery of an intolerable social situation. Those of adverse opinion will not be much impressed with Dr. Abbott's presentation of the matter. What is certain is, that the profound inertia of Mr. Beecher's honorable fame acquired by many years of splendid service has in the long run done much to break the force of men's injurious suspicions, and even to abate the confidence of his most hostile critics in the soundness of their view. In one respect Dr. Abbott's statement, however wise and just, must prove misleading to the reader who is under middle age. Dry, hard, and cold, it gives no sign of the social demoralization that overwhelmed the local community for a succession of years, during which one sordid theme engrossed the general mind, and with its terrible insistence broke up the peace of families and alienated friend from friend.

It is a great relief to turn from this chapter to that on Mr. Beecher's "Later Ministry." The particulars of his lecturing are eloquent of the almost superhuman vigor of the man. He was already sixty-three years old when he began his courses under the direction of Major Pond. During the next twelve years he travelled on his lecture tours nearly three hundred thousand miles, and lectured one thousand two hundred and sixty-one times. On a single tour he delivered ninety-two lectures and sermons and travelled seventeen thousand miles. But Dr. Abbott's opinion is that in none of this herculean labor was Beecher at his best. He was at his best in the pulpit, next on the rostrum, last on the lecture platform. It is as an orator that he receives the highest praise, but as a sacred orator. He is compared with Webster, Gough, Phillips, and other great orators, in an interesting, but not quite convincing manner. The analysis of his preaching is much better. At first largely pictorial, imaginative, emotional, it became less impassioned, more controlled, and remained so during the mid-period of his life. In the next stage he was a teacher; his sermons on "Evolution and Religion" furnishing the best illustration of the type. Very strange, indeed, is Dr. Abbott's account of evolution in general and Mr. Beecher's in particular. His characteristic notes in either case are the denial of the fall of Adam and total depravity. There is not a word concerning the really significant denial of special creation.

A chapter on the 'Yale Lectures on Preaching' commends them as the best fruit of Beecher's intellectual activity, and as that which has the most enduring quality. A chapter on "Editor and Author" makes no excessive claim. Beecher is called a great editor, but only because of his power of instigating others. He did little to back up his name as editor of the *Christian Union*, except by permitting stenographic reports of his "Lecture-Room Talks." Dr. Abbott was his associate editor from 1876 to 1881, and during that time Beecher's editorials decreased from few to less, and he would never read a proof. His 'Life of Christ' is praised as an eloquent interpretation. In so far as he had a Christology it was heretical, generally Monophysite; but in the 'Life of Christ' it was more Patripassian, presenting "a divine life in a human body," a doctrine which Dr. Abbott cannot abide. A brief chapter on Beecher's last months and death brings us to a closing one, "Estimates and Impressions," the best part of which is an account of Beecher's speech at the Herbert Spencer dinner. Dr. Abbott "can see the critic smiling with amused contempt at this paragraph, if he deigns to read it." But it visualizes Beecher with peculiar force, and more pictures of this kind would have brought back the man more vividly to those who remember him, and have made him a more positive reality for those who never saw his face.

AMERICAN RAILWAYS.

American Railways. By Edwin A. Pratt. The Macmillan Co. 1903.

American Railway Transportation. By Emory R. Johnson. D. Appleton & Co. 1903.

These two books treat their subject from widely different points of view. Mr. Pratt's volume (which first appeared, in substance, in the columns of the London *Times*) is the result of a four months' tour in the United States, and is mainly designed to enlighten the representatives of English railway interests on the subject of the American railway system. It is in part descriptive of the American methods of travelling and transportation. The comparison of these with the corresponding features of the English system is valuable, and, as far as it goes, accurate. We say as far as it goes, for many points of difference, which can hardly have escaped the author's attention, are barely dwelt upon. For instance, while the sleeping-car (converted by day into a parlor-car) is discussed at length, we find no description or discussion of the ordinary day parlor-car, with chairs, which is of course the American vehicle corresponding to the ordinary English first-class railway carriage. Nor is there any account of the "smoker," an American railway vehicle for which no analogue exists in Eng-

land, but which is to be found on every railway train in the United States.

The general conclusion reached by the author is the rather discouraging one that neither country has anything to learn from the other. But his description is at war with his conclusions, for his account tends to prove very convincingly that (even allowing for the divergences between the conditions in the two countries which have produced such wide differences as everybody notices), the English system is complete and finished, while the American is an unfinished and inadequate one, which, to become complete, must copy at many points from the English. This it is actually doing. The separation of the railroad tracks from the highway levels, gradually introduced here now by means of compulsory legislation, was a feature of the English railway systems from the first; our very inadequate system of porterage and cab service at the large city stations is copied, and badly copied, from the English. "With a few exceptions, American railway stations are distinctly inferior to railway stations in Great Britain." In this country, while we have introduced a system of dining-cars and parlor buffet-cars, these are for Pullman passengers only, and this provision bears no relation to the question of station buffets at all. These are found everywhere in England, and, we may add, on the Continent, where they are, we believe, compulsory. Americans like checks for baggage and prefer Pullmans to English railway carriages, but nobody prefers a poor railway station, such as ours for the most part still are. The tendency of the American railway system is to make the journey comfortable for the luxurious classes, while the company is allowed to save money by "scrimping" the others. Rigid Parliamentary supervision in the interest of all classes is the rule in England. The author's remarks would seem to point to the conclusion that the organization of railway passenger service is distinctly inferior in America; the consequences of the difference fall mainly, as is always the case, on the great, long-suffering travelling public.

We have confined ourselves in these remarks to the passenger service, because as to this every traveller is an expert. But we suspect that much the same differences might be found in other directions. The subject of freight and motive power is gone into in Mr. Pratt's pages, with the general conclusion that the conditions of the two countries are wholly disparate; but it appears that while in this country the consignee is generally expected to take away his freight himself, or through an express company, in England it is delivered to him by the railway. As to the enormous advances made in this country in the size and power of locomotives and the capacity of freight cars, the author seems to think that the English difficulty is mainly lack of freight. But on all questions relating to freight the self-interest of the roads is sure to be the best guide in the long run. It is from this branch of the service that the revenue of the roads is mainly derived, in both countries. It is to the passenger service that public attention should mainly be directed, for it is an undisputed fact that until within very recent years considerations affecting the comfort, convenience, and even safety of the passengers have been neglected in this country. The statistics on the subject of safety are not altogether reliable (what is wanted is a table showing the number of accidents *per mile travelled*); but we know that, other things being equal, safety must depend upon such matters as the separation of grades, the supply of elevated and depressed crossways at stations, the doubling of track, etc. The author quotes American railway men as substantially admitting the incompleteness of our railways in these respects. They defend their policy as "a policy of essentials." In the beginning,

"it was not absolutely essential, as regards the working of the line, to prevent people from being killed. So the railway companies put down, in the roughest form, just what was wanted for the time being, and nothing more; and they *left humanitarian considerations on one side until they were successful and prosperous enough to do bigger things and to indulge in the luxury of surplus emotions.*"

Unfortunately, just as our Legislatures were beginning to see the necessity of compelling them to indulge in the luxury of surplus emotions—*e. g.*, by separating the tracks from the highways—the development of the new trolley system (again confined to "essentials") has introduced a new source of danger. The idea that, because we can explain many things of this sort by the circumstances under which our system has grown up, therefore we can trust to the companies, as they grow and prosper, to become more and more humane and considerate, is, of course, preposterous. Corporate bodies are taught respect for public rights and comfort by the Legislature and the courts, or not at all.

Mr. Johnson is professor of transportation and commerce in the University of Pennsylvania. His book can hardly be called original, but is a carefully drawn picture of the American railway system as it exists, accompanied by a discussion of some of the "problems" of the day. Among these is one the discussion of which has been going on for thirty years, and to a solution of which we seem to be no nearer than when we began. The "Granger" movement resulted in judicial decisions that the State had power to fix rates, but this is subject to the restriction that they must be reasonable. Neither the individual States nor the Federal Government can so fix the rates of transportation as to confiscate the value of the property invested in railways. Further than this, the courts protect railway property against unreasonable attacks by means of judicial inquiry into the facts of the case and by injunctions. Laws are passed against rebates and discriminations between shippers, and against contracts in restraint of trade and to make competition compulsory. The first two are effectual, because they are enforced by the courts, and are merely confirmatory of a general principle of justice and the common law; the last proves wholly nugatory, because the railroads which find that they have a common interest in combination, become consolidated, and divide the territory of the United States into "systems," of say 20,000 miles each, within the limits of which competition practically ceases. The final result of the struggle is that rates are today fixed not by the States or the Federal Government, but by the railroads themselves. Professor Johnson seems to think that the goal to which we are tending is the socialization of railways—*i. e.*, the use of the railway system and revenues for public objects. This is the German system, but it comes from State ownership, and there is no evidence at present that we are proceeding in any such direction. What Professor Johnson's discussion does show is, that there is a natural law which tends to keep railway rates down; and on this our reliance must in the long run be placed. A railroad must *foster* business. As the amount of money invested in it is always increasing, it cannot afford to put such a tax on any class of traffic as will drive it away. That this law does not work with mathematical precision may be admitted, but it works sufficiently well to have brought down rates as Government regulation has not brought them down. Besides this, those who object to private ownership should explain why Government ownership is not a still greater monopoly. Government railway ownership is not at all like the State ownership of highways, because the use of the latter is free to all comers, the fund for "maintenance of way" being supplied from general taxation. The author's chapters on monopoly and competition, the "Theory of Rates and Fares" and "Rate-making in Practice," throw a flood of light on the subject, but do not encourage us to believe that our present system will be successfully supplanted by any other, at least until our whole government and social and legal systems undergo such changes as to make a new heaven and a new earth. What is possible here, as in the passenger business, is intelligent State supervision, publicity of accounts and rates (already to a very great degree attained), stern repression of all unjust discrimination; not paternalistic attempts to fix rates through administrative boards.

The Art of Cross-Examination. By Francis L. Wellman. With the cross-examinations of important witnesses in some celebrated cases. The Macmillan Co. 1903.

Mr. Wellman's book is a substantial contribution to the literature of a very fascinating subject, and will be found almost equally interesting by the laity and the profession of which he is a member. An expert cross-examiner himself, of many years' standing, he not only has analyzed the principles of the art in a very satisfactory and thorough manner, but has illustrated the application of his principles by giving some celebrated cross-examinations in just that detail which is needed for dramatic effectiveness, and which reproduces the scene in court so as to make the reader almost feel that he is present at the trial.

Cross-examination is at its best in criminal trials, and then especially as a means of exposing perjury dramatically. From the very fact that life or liberty depends upon the issue, the case, which frequently turns upon the testimony of a single person, is alive with interest, increasing towards a climax, which, when it comes at the end of a searching cross-examination, seems like the stroke of fate.

Mr. Wellman's account of the Carlyle W. Harris case, in which, if we remember right, he was engaged, is novel, and forms perhaps the most original contribution to the narrative portion of the book. It is interesting, also, as throwing light on one of the causes of the great expense of many modern *causes célèbres*—the vast amount of

medical research involved. The case was one either of morphine poisoning or of organic disease; the deceased (Harris's wife) showed symptoms which, it was contended, might be attributed to either. For the purpose of clearing up the doubt, the reports of six thousand cases of morphine poisoning had been examined by the prosecution before trial, and through the information gained in this way the district attorney was enabled to break down the testimony of the defence's chief witness, an expert, whose name the author suppresses. The distinguishing symptom of the case was symmetrical contraction of the pupils of the eyes, and there was no doubt that Mrs. Harris had taken capsules containing harmless doses of quinine and morphia procured for her by her husband, who was a medical student. The theory of the prosecution was that Harris, who had reasons for wishing his wife out of the way, had emptied one of the capsules and filled it with morphine, thus causing her death. On the trial Dr. —— testified that symmetrical contraction of the pupils was not a certain symptom of morphine poisoning, and that his belief was grounded on a case recorded by a Professor Taylor. When this point was reached, the cross-examining counsel asked a single question: "Well, sir, did you investigate that case far enough to discover that Professor Taylor's patient had one glass eye?" Harris was convicted and executed. Indirectly this cross-examination caused the conviction of another murderer. Within a year Dr. Buchanan was indicted and tried for the same offence—wife poisoning by means of morphine. In this case the pupils were not symmetrically contracted; but meantime it appeared that during the Harris trial Buchanan had observed to some one that Harris was a bungler, for if he had mixed a little atropine with his morphine, it would have dilated at least one of his victim's eyes. The presence of atropine was discovered in Mrs. Buchanan's body. Buchanan also was convicted and executed. The Harris case is as wonderful, though not as dramatic, as the great cross-examination of the forger Pigott, in the Parnell Inquiry, by Sir Charles Russell, by the aid of an incriminating letter. Mr. Wellman gives this in full.

Vivâ-voce cross-examination of witnesses in open court is one of the distinguishing features of our system of law, and, in trials in which perjury is likely to be resorted to, a very valuable feature. Whether it is of any great use in ordinary litigations may well be doubted. We get along well enough without it in thousands of cases tried on "papers" only. But when a man is engaged in a contest with the Government which involves the risk of death or imprisonment, it is an immense safeguard for him if innocent, and an immense aid to the prosecution if he is guilty. The author has a good deal to say about the abuse of cross-examination; but this should be within the control of the courts. The license often given to counsel to torture the witness is the only serious reproach brought against cross-examination which, as Mr. Wellman points out, is (when improperly applied) often more dangerous to him who resorts to it than to either antagonist or witness.

The Cavalry Horse and his Pack. By Lieut. John J. Boniface. Kansas City, Mo.: Hudson-Kimberly Publishing Co. 1903.

This book, under a modest title, is an encyclopædia of much that pertains to the horse, as appears from the secondary title, "Embracing the practical details of Cavalry Service." It consist of more than 500 pages, and covers in considerable detail a very wide range of experiences, most of which have been heretofore made the subject of official reports or personal publication by Government officials. Many of the illustrations are very good, but if there is anything which might disturb the cordial understanding existing between Great Britain and America, as a result of the successful termination of the Alaska discussion, it is the illustration of the "British Cavalryman on Horse" (page 26).

The opening chapter is on the history of the horse, from the earliest period through the age of chivalry to the modern cavalryman and his horse. The various classes of cavalry in different armies and the historical organization of the American cavalry are briefly commented upon, with copious illustrations. Just what the illustrations of the Percheron, Clydesdale, and English Shire horses have to do with the main subject is not easily understood. The author, however, does not recommend any of these animals for cavalry service, but suggests the desirability of a cross between the Percheron and the thoroughbred. Brief descriptions of these horses, the Cleveland bays, hackneys, German coach, and others, serve to further inform the casual reader investigating the literature of the horse.

The author states that the experience of different cavalry services the world over has gradually developed a distinct and separate class of horses for cavalry work which might be said to embrace "the disposition, spirit, agility, and intelligence of the thoroughbred gaited saddle animal and the large bone and strong sinew, short back, stout forehead, strength, and hardihood of the Hackney, Clydesdale, and Percheron." It is something new to hear of the thoroughbred gaited saddle animal. Many of the best gaited saddle-horse families of the blue-grass regions of America are the results of crosses, some of which have a considerable infusion of thoroughbred blood; but no well-established gaited saddle-horse family is constituted of thoroughbred blood entirely. There is nothing in the Clydesdale or Percheron that makes them or their progeny suitable or desirable for saddle purposes, either civil or military. Doubtless the author has been misled in this matter. It is next to impossible to breed out the large heavy feet and telltale fetlocks of the Clydesdale or Shire. The heavy cavalry of France has used at various times horses with a considerable proportion of Percheron blood, but then the charges of some of Napoleon's heavy cavalry, mounted on these animals, were made at a gait little faster than a slow trot, notwithstanding the many paintings showing these animals at full speed.

Chapters on shoeing, bitting and bits, and saddles follow in order, with little or no modification of prevailing military ideas on those subjects. In the last-named chapter, however, the author asserts that our troopers usually saddle far forward whenever they have a roughly gaited animal assigned to them, because of the belief that this does away with the roughness of the gait. This is quite a novel explanation of the prevalent habit with American cavalry, which has often been commented upon, and has generally been supposed to result from the shape of the saddle and its smooth undersurface.

It is not until chapter ten is reached that the author takes up the subject of the pack. All nations have, since the establishment of regular armies, found themselves anchored to very heavy equipments for cavalry service; the amount to be carried in the way of arms, ammunition, food, clothing, and minor necessary articles, brings the weight of the pack up to about one-fourth that of the average horse. Ever-increasing efforts have been made to reduce this, but without satisfactory results. The American cavalry carries a very large load, but no greater than that which other nations are forced to adopt under like conditions. The remarks on the modern method of cavalry marching read strangely to one of the old school of American cavalrymen accustomed to cross the Plains at a walk; but some years ago it was discovered that horses could be safely taken at a faster gait than the walk, and brought into camp earlier, giving them time to rest and feed, and relieving them of the weight of the trooper and pack.

The passage of rivers and various foreign experiments in that line are commented upon. Transportation of horses by rail and sea constitutes a separate chapter, embracing the experience of recent years. The remainder of the volume is devoted to riding and training, showing the effect of various kinds of seats; stable service, forage, the service of pack trains, medicines, and the treatment of simple diseases.

After Prison—What? By Maud Ballington Booth. Fleming H. Revell Co.

Whatever may be thought of the general methods of the "Volunteers of America," there can be but one opinion of the work here described. Making every allowance for the exaggerations of enthusiasm and the blurring effects of sentiment, we must admit that Mrs. Booth's narrative silences all cavilling. The object of sending lawbreakers to prison, whether it be called punishment or reformation, is to induce them to keep out of it. The operation of the law frequently causes men who have been sent once to prison to return to it. When a convict has served his term, he is turned loose to shift for himself. In a few States he is given a suit of clothes, a little money, and, perhaps, transportation to the place where his offence was committed. But he bears the stamp of the prison in the pallor of his face, in the furtive look of his eye, and even in his gait. Those who have not known him regard him with suspicion and with fear. Those who know him want nothing to do with him, and regret that he is at large. The officers of the law are ready to arrest him on suspicion, and his only welcome is from his former associates in crime. If he tries to get work, no one wants his services. If he obtains a place by false representations, he will lose it when the truth is known. If he conceals nothing, masters dare not employ him, and men will not work with him. All this is known to him when he is yet in jail, and

whatever disposition he may have to reform is smothered by despair or overcome by necessity. Little wonder if he soon finds himself back in prison and his last state worse than his first.

Fortunately, the case is not so bad as we have represented. Sometimes his family will receive him, or charitable men will befriend him. The prison wardens can occasionally find him work, and some benevolent associations endeavor to aid him in leading an honest life. Mrs. Booth supplements these agencies with the power of love. Rightly or wrongly, but often rightly, she assumes that the prisoner has violated the law because his environment has been evil, and that he can and will reform himself if the opportunity is presented. Even those who have sinned in spite of the best of influences are brought by the misery of prison life to see their wickedness, and respond to genuine manifestations of sympathy and love. Of the sincerity of Mrs. Booth's ministrations we cannot doubt, although we sometimes regret that some other pen than hers might not have recorded them. Yet as she has to appeal to the public for aid, she must disclose the nature of her mission and the methods which she employs, even if her own agency is thus made prominent.

One of the most satisfactory features of her work is that the publicity given by sensational newspaper reporters is discouraged, and the privacy of her "boys" is respected. There can be no uncertainty concerning the esteem in which she is held by those among whom she labors. Were other evidence wanting, the testimony of the prison-wardens would be conclusive. Although placing no obstacle in Mrs. Booth's way, they assured her at the outset that her labors would be in vain. They were quickly converted; and they heartily testify to the excellent influence exerted by the "Little Mother," as the prisoners have learned to call her. There seems to be no doubt that the "Volunteer Prison League," formed by those who profess their intention of reforming, has accomplished remarkable results. Warden Thayer of Dannemora, who expected little good from the movement, put down the names of one hundred and seven of these "Volunteers," all of them men who had constantly been reported for discipline. After a year, he found that only three had required punishment.

Altogether, the most conclusive, as it is certainly the most touching, piece of evidence in favor of Mrs. Booth's work, is furnished by the support given her by convicts. The idea of a home for discharged prisoners seems to have originated in Sing Sing. The men felt that if they were to reform, they must have a temporary refuge from which to begin their new career. It is hardly necessary to say that the income of convicts is limited. By steady overwork and good conduct during a whole year a man may earn five dollars. But in order to maintain their "Hope Hall," as the new refuge was called, the prisoners in Sing Sing managed to collect four hundred and forty-seven dollars. This surely deserves to be entered in heaven's chancery beside the widow's mite. Mrs. Booth assures us that of the three thousand discharged prisoners who have passed through her two homes, three-fourths have done well. One-fifth have been lost sight of; perhaps 5 per cent. have returned to prison.

Mrs. Booth touches lightly on the subject of prison reform. The improved behavior of prisoners reacts on their keepers; but the accursed trail of the politician renders improvement in the system almost hopeless. She speaks with just indignation of the mean and cruel policy of the labor unions in trying to prevent the employment of convicts in productive work. But some employers also exerted their influence in support of this policy. Were it overthrown, prisoners could earn not only their own living, but also enough to prevent their families from becoming charges on the poor-rates. Viewed merely as saving expense to the State, Mrs. Booth's reformatory agencies deserve support. The State deliberately increases the cost of crime to the community; Mrs. Booth does much to neutralize this shameful policy. But her work is most properly regarded from the point of view of morality and religion.

Geographic Influences in American History. By Albert Perry Brigham, A.M., F.G.S.A., Professor of Geology in Colgate University. Boston: Ginn & Co. 1903. Pp. xiii., 366.

American History and its Geographic Conditions. By Ellen Churchill Semple. Boston: Houghton, Mifflin & Co. 1903. Pp. 466.

There are encouraging signs that the importance of a scientific study of geography is coming to be recognized in this country, as it has long been recognized in most European countries. The establishment of courses on commercial and historical geography in our leading colleges and universities is one sign; the publication of books like that of Professor Brigham and Miss Semple is another. Undoubtedly one cause of this increased attention to questions of geography in connection with history is the acquisition of new territories by the United States as a result of or contemporaneously with the Spanish war; our position as a "World Power" is felt to be conditioned in some way by "world geography." Whether Imperialist or anti-Imperialist, we can all agree that the result, from this point of view, is wholly good.

The two books which are here under consideration bear almost identical titles, and cover much the same ground. Yet there are important differences—important especially for the student of history. One way in which they differ is, indeed, indicated by the titles, similar as they are. Professor Brigham places "geographic influences" first; Miss Semple places American history first. The two books themselves reflect this different relative emphasis which the titles proclaim. Professor Brigham is primarily a student of geology; and while he has a certain familiarity with American history, it is almost necessarily based upon superficial rather than intimate knowledge. Much of his information has been gained, one may suspect, by "reading up" the subject rather than from long and careful study of it. One feels throughout that the point of view is that of a geologist interested in pointing out the relations between geological phenomena and historical facts—relations, it must be added, that are usually so obvious as to make the book of interest to the general reader, probably, rather than of service to the historian. Miss Semple, on the contrary, is primarily a student of history, or rather of historical geography, as her previous publications indicate. She is, consequently, rather more at home in dealing with the subject, at least from the side of history, than Professor Brigham is. In her book one gets more history and geography, less geology, and the information here presented has not been "bolted," so to speak, but thoroughly digested. Another difference follows quite naturally. While Professor Brigham has not neglected past history, it is not too much to say that he is chiefly interested in the present and future of the United States as influenced or as likely to be influenced by geographic conditions. Chapter vi., for instance, is quite as much a discussion of the industrial prospects of the South as it is a discussion of the history of the South from the point of view of its geographic conditions; and chapter viii., entitled "Where Little Rain Falls," is largely devoted to the possibilities of irrigation. Such chapters as these in particular contribute to make the work of Professor Brigham a cross between an industrial prospectus and a treatise on historical geography. Miss Semple, on the other hand, is little concerned with the future; her book, with the exception of three chapters, possibly, has to do with historical geography proper, and is in no sense an advertisement of the nation's resources.

She has made a very valuable addition to the literature of American history, the result, one would say, of long study and careful thought. Her knowledge in the field of geography and of American history is extensive. She has keen insight into the main tendencies of American development. The book opens with a chapter on "The Atlantic States of Europe," the most valuable part of which is the discussion of the Atlantic itself. A second chapter shows how the search for the northwest passage gradually gave place to the search for fur, leading ultimately to the French exploration of interior waterways. Two chapters follow on the "Appalachian Barrier," one showing the importance of isolation and concentration for the English colonies, the other bringing out more clearly than any work with which we are familiar the two-fold character of the spread of population in the Appalachian region—the movement along the rivers through the mountains, and the movement up and down the valleys parallel to them. Miss Semple next proceeds to discuss the effect of the new environment on the trans-Alleghany settler, the physiographic basis of the Louisiana purchase, and, in a later chapter, the spread of population in the Mississippi Valley. The relations between the Atlantic Coast and the development of sea power, and the war of 1812, furnish the material for two more chapters. Then follow three chapters, perhaps the best in the book, in which is presented a careful study of the northern and southern routes controlling expansion into the Far West. Three more chapters deal with the geographic distribution of immigration, of cities and industries, and of railroads. The work closes with two chapters pertaining to recent history—one on the "United States in its relation to the American Mediterranean," and one on "The United States as a Pacific Ocean Power."

There is a good index, and a fairly good bibliography. Miss Semple's style, without being brilliant, is clear and expressive. So

far as we have observed, the book is remarkably free from errors. It is perhaps misleading to say that it was understood in the United States that the Louisiana treaty established the boundary at the Perdido (p. 106). Richmond M. Smith should be Richmond Mayo-Smith (p. 335).

The Taill of Rauf Coilyear: A Scottish Metrical Romance of the Fifteenth Century. Edited, with introduction, notes, and glossarial index, by William Hand Browne. Baltimore: The Johns Hopkins Press, 1903.

The poem which Prof. Hand Browne here presents in an exceptionally handsome and complete edition is one of the most interesting documents in Middle Scots literature. Although no copy of the poem earlier than the printed edition of 1572 is extant, its date of composition must be at least as early as the latter half of the fifteenth century, and the comparative accuracy of the text makes it important linguistically. It has been already edited by Herrtage, in the Early English Text Society's collection of Charlemagne romances, by Amours for the Scottish Text Society, and, still more recently, by Tonndorf. The two former editions, however, are parts of somewhat expensive collections, and Tonndorf's edition has neither notes nor glossary; so that there was room for an edition for the use of the average student. Professor Browne, however, has supplied so admirable an equipment for the study of the work in all its aspects that his volume would have justified itself even if it had been in more direct rivalry with its predecessors.

The book begins with a short but well-packed account of poetry in Scotland before the Reformation. Then follows a summary of the external history of the poem, of its contents, of its relation to other treatments of the same class of material, and of its place and value in literary history. Dr. Browne regards it as holding an intermediate place between the chivalry-romance and the humorous folk-tale, but differs from Professor Brandl's view of the second episode, the combat of Rauf with the Saracen, as a burlesque on the chivalry-romance. He points out that the author's treatment of this adventure, and the subsequent knighting of the collier, are completely serious; and he treats very gently Brandl's absurd confusion of the present poem with 'The Awntyrs of Arthure at the Terne Wathelyne.' He agrees with previous authorities in dating the language of the poem in the latter half of the fifteenth century, though he properly rejects, after careful examination, Tonndorf's attempt to fix it more exactly by identifying "Dame Jane" with Jeanne de Laval, widow of René of Anjou. He inclines to think the author a layman, but sees no evidence for any more definite identification, or for assigning the work to any particular district in Scotland. The closest parallel to the first adventure he finds in 'John the Reeve'; and to the second in the fight of Roland and the Saracen Otuel in the romance of 'Otuel.' Both adventures, however, belong to a very common type, and there is no question of influence here.

The third section of the introduction deals with the language, the specific treatment being preceded by a sketch of the early history of Lowland Scottish. One misses here a reference to Mr. Gregory Smith's recent notable contribution to the history of the vocabulary of Middle Scots, viz., the correction of the usual over-statement of the French influence, and a compensating stress on the direct importation from Latin. The treatment of the phonology is one of the most useful attempts yet made in this field, and, so far as it goes, is commendably clear and intelligible. It is to be regretted that to the statement of the vowels in Northumbrian, West Saxon, and Middle Scots, Dr. Browne did not add the normal Middle English form, so that a conception of the nature and extent of the variation found in Scots could be gained without further search. Similarly, in the summary of Scots vowels on page 41, the Middle English equivalent would have been more useful than the Modern English.

The text is carefully and skilfully done; and the notes and glossary are full, and enriched with the results of a wide reading in early Scottish literature. One or two suggestions may be made. "Wist" (v. 21) is probably *wished* rather than *knew*. "Cunnand" (vv. 319, 387, 538) in the sense of *Covenant* has been omitted from the glossary. The phrase on page 24 referring to the present poem as "the solitary English metrical romance of the Charlemagne cycle" is misleading. To the Bibliography should be added on page 68 a reference to Schipper's edition of Walter Kennedy (Vienna, 1901).

The volume as a whole is very welcome as one of the most satisfactory editions of a Scottish text so far issued.

EGYPT EXPLORATION FUND

Established in London in 1882

The Committee for the United States solicit subscriptions for the work of the present season, which will be conducted, as heretofore, under the personal direction of Professor W. M. FLINDERS PETRIE. Explorations are to be made in the pyramid field of Sakkara and at other neighboring sites. Every annual subscriber of five dollars or more will receive the Memoir of the Fund for the year, an illustrated quarto volume, describing the results of the year's work.

Græco-Roman Branch:—In this branch of the Fund Messrs. Grenfell and Flunt's remarkable discoveries of papyri have been made at Oxyrhynchus and in the Fayûm. It is highly important that this work should be continued, because of its great value to students of the Bible, the Greek and Roman classics, and life in ancient Egypt. Annual subscribers of five dollars or more to this branch of the Fund will receive Grenfell and Flunt's volume on the Papyri, instead of the Memoir mentioned above, if they specify that their subscription is for the Græco-Roman branch.

Archæological Survey of Egypt:—This branch of the Fund, under the direction of Mr. N. de G. Davies, is devoted to the copying of inscriptions and sculptures, from the monuments of Egypt. Annual subscribers of five dollars or more will receive an illustrated quarto volume describing the year's work in this branch, if they specify that their subscriptions are for the Archæological Survey.

For the Committee,
WILLIAM W. GOODWIN, Chairman.
Subscriptions should be addressed to the Secretary, J. Ellerton Lodge, 8 Beacon St., Boston, Mass.
